Report of the Board of Directors

The Board of Directors of Nord Est Asset Management S.A.(NEAM) is pleased to present the Annual Report of the Fund NEF for the year ended December 31, 2025.

ECONOMIC CONTEXT

International scenario

The global macroeconomic scenario continues to be characterised by high uncertainty. The biggest sources of risk are represented by an increase in tariffs, which would impact economic growth, and geopolitical tensions, which could lead to supply chain disruptions and an increase in commodity prices.

In January 2026, the International Monetary Fund (IMF) revised upwards its global GDP growth projections compared to the assessment during the year, in light of a reduction in the impact of US tariffs: estimates for 2025 indicate growth of 3.3%, and growth of 3.3% is also expected for 2026.

In the United States, the IMF estimates growth of 2.1% for 2025, higher than that of advanced economies overall (1.7%). For 2026, growth in the US is expected to be 2.4%, supported in the short term by tax incentives for corporate investment.

As for the Eurozone, the European Commission estimates growth of 1.3% for 2025 and 1.2% for 2026, in line with estimates published by the European Central Bank, which predict GDP growth of 1.4% in 2025 and 1.2% in 2026. The main element of attention is represented by the revision of the defense spending budget by the main European countries, the greatest impacts of which will manifest themselves in the following years.

The European Commission also forecasts a gradual but steady decline in the unemployment rate, which is expected to rise from 6.3% in 2025 to 6.2% in 2026, and a slowdown in inflation, which is expected to fall from 2.1% in 2025 to 1.9% in 2026. On price growth, the European Central Bank expects a more marked slowdown dynamic, estimating inflation at 1.7% for next year. Inflationary pressures in Europe are being eased by the appreciation of the euro, which reduces import costs, and by temporary fiscal measures put in place by governments to ease consumer prices. The reduction in global demand for European products, caused by the introduction of tariffs, represents a further brake on the growth dynamics of consumer prices.

Financial and currency markets

During 2025, as inflationary pressures eased, the world's major central banks continued, albeit at different times, the process of easing monetary policy.

With regard to interest rates, in the first four meetings of the year the Governing Council of the European Central Bank intervened with cuts of 25 basis points on each of the three key rates. Since its meeting on 24 July, the ECB has not considered it appropriate to continue with further reductions in its subsequent meetings.

The policy rate picture in the eurozone at the end of 2025 was therefore as follows: 2.00% for the overnight deposit rate, 2.15% for the rate on the main refinancing operations and 2.40% for the marginal lending rate.

The European Central Bank's decisions, taken based on a data-driven approach, were supported by the progress of the disinflation process, with medium-term inflation expectations aligned with the 2% target later this year.

As regards fiscal policies, the European Central Bank confirmed its Quantitative Tightening approach in parallel, continuing with the gradual and predictable reduction of both the asset purchase programme (APP) and the extraordinary pandemic programme (PEPP), as the principal payments from maturing securities is no longer reinvested.

The Federal Reserve has only eased monetary policy since the second half of 2025. After keeping Federal Funds interest rates in the first half of the year in a range between 4.25% and 4.50%, the US central bank has cut rates by 25 basis points at each of the last three meetings of 2025 (17 September, 29 October and 10 December). At the end of the year, the Federal Funds rate therefore stood in a range between 3.50% and 3.75%.

Despite the stability of the rate corridor maintained by the US institution in the first half of the year, the trade policy implemented by the US administration was the main determinant of the depreciation of the dollar against the main European currencies. The EUR/USD cross moved in the twelve months of 2025 from the 1.04 to 1.17 area, highlighting a weakness of the US currency compared to 2024.

The trend in European government bond yields during 2025 was marked by two factors: the ECB's rate manoeuvres, which affected the levels of yields on short maturities, and the narrowing of spreads towards Bunds of Italian, Spanish and Portuguese bonds. Yield differentials between peripheral bonds and German counterparts have reached their lowest since the sovereign debt crisis (10-year BTP-Bund spread below 70 basis points), demonstrating investors' perception of limited idiosyncratic risk for these countries. The only exception was France, which paid the effects of political instability: the spread between OATs and BTPs of the same maturity was cancelled already during the summer, anticipating the subsequent rapprochement between the ratings of the two countries. The public spending plan announced in Germany led to a surge in yields in March, but the movement was quickly reabsorbed after the German government made it clear that the increase in debt will take place gradually and over a long time horizon.

The downsizing of the tariff theme and investors' high expectations on the potential of artificial intelligence (AI) have led equity markets to update new records in the second half of 2025, both in the United States and, to a lesser extent, in Europe. The concentration of the market on a few stocks with record levels of capitalization, all linked to the AI sector, fuels fears of a speculative bubble. In 2025, however, high share prices were supported by an acceleration in corporate earnings growth.

DEVELOPMENT IN CORPORATE ASSETS

NEF Assets

NEAM is a Luxembourg-based asset management fund wholly owned by Cassa Centrale Banca, which manages the NEF mutual investment fund, comprising 17 different sub-funds (the "NEF Fund").

The NEF Fund is placed by all affiliated banks and numerous client banks, most of which use Cassa Centrale Banca as the entity responsible for payments, i.e. as an intermediary called upon to perform activities in support of clients in the administrative, accounting and tax settlement phases. Thanks to the good results of the BCC-CR-RAIKA commercial network, despite investors still looking to invest in BTPs due to current market interest rates, the assets under management of the NEF Fund reached about €9.9 billion at December 31, 2025, an increase of 20.68% since the beginning of 2025 (+€1.7 billion).
The growth in assets under management is the result of positive net inflows of €1,084 million and a positive market contribution of €616 million. As regards saving plans, there was a net increase of 96,122 new contracts during the year, for a total of 655,222 units, equivalent to monthly inflows of approximately €75 million. These results were supported by the initiatives of Cassa Centrale Banca's commercial finance structure.
In detail, the data show significant inflows since the beginning of the year for certain sub-funds: NEF Ethical Balanced Dynamic €74 million, NEF Ethical Bond Euro €73 million (net of the merger with the NEF Target 2025 sub-fund), NEF Ethical Corporate Bond Euro with €15 million, NEF Ethical Short Term Bond Euro with €220 million, NEF Ethical Global Equity with €85 million, NEF Risparmio Italia with €56 million, NEF Ethical US Equity with €23 million, NEF Ethical Global Trends with €52 million, and NEF Ethical Target 2029 with €433 million. There were significant inflows into institutional classes, which offset profit-taking, particularly in the equity sub-funds. The NEF Conservative I sub-fund, reserved for institutional investors, alone contributed €350 million.
The NEF range includes several sub-funds with assets exceeding €500 million (NEF Ethical Balanced Dynamic €1,020 million, NEF Ethical Global Trends €1,152 million, NEF Ethical Bond Euro €856 million, NEF Ethical Global Equity €707 million and NEF Ethical Euro Equity €711 million, NEF Ethical Short Term Bond Euro €671 million), while numerous other sub-funds have now exceeded the €300 million threshold.

Confirming the high quality of its management, NEAM received important recognition this year in the guide published by Il Sole 24 ORE. The 2025 edition of the 'I 300 Migliori Fondi' (Top 300 Funds) yearbook once again highlights the quality of management of three NEF sub-funds. The independent analysis fund CFS Rating has placed the NEF RISPARMIO ITALIA and NEF ETHICAL GLOBAL EQUITY sub-funds in the highest segment of the offering in Italy, awarding them a 4-star rating, while NEF ETHICAL EURO EQUITY has been recognised as "Best Over 10 Years", as has NEF ETHICAL GLOBAL EQUITY. NEF ETHICAL GLOBAL EQUITY, an equity fund characterised by significant sector and currency diversification, ranks among the leaders in both the "Best 300" and "Best Fund over 10 years" categories.

[1] First NAV in February 2025
[2] Merged in NEF Ethical Bond Euro on 13 June 2025

In 2025, NEAM has reached the objective to expand the offer of sub-funds classified as article 8 according to SFDR. As of December 31, 2025, there were eleven sub-funds classified as art. 8. and art. 9, eight of which for the entire year 2025, namely:

NEF Ethical Global Trends (art. 9)
NEF Ethical Balanced Conservative (art. 8)
NEF Ethical Balanced Dynamic (art. 8)
NEF Risparmio Italia (art. 8)
NEF Ethical Corporate Bond Euro (art. 8)
NEF Ethical Bond Euro (art. 8)
NEF Ethical Short Term Bond Euro (art. 8)
NEF Ethical Target 2029 (art. 8)

The following three sub-funds became art. 8 in June 2025:

NEF Ethical Euro Equity
NEF Ethical Global Equity
NEF Ethical US Equity

RISK AND UNCERTAINTIES

The 2025 financial year confirmed moderate economic growth and a slowdown in inflation. The policy adopted by the US Administration of renegotiating import duties to trading partners has generated volatility in the financial markets and triggered dynamics that may negatively impact some economic sectors even during 2026.

The geopolitical scenario remains strongly conditioned by the conflict in Ukraine, the complex plan to end military clashes in the Middle East and further military clashes in other non-European areas. The duration and evolution of these situations to date represent unpredictable variables, with related implications on the world and national economy.

The world's major central banks have maintained an expansionary monetary policy and will monitor the macroeconomic and financial scenario during 2026 in order to assess whether or not a change in their economic policy approach is appropriate.

In this context, based on the 2026 budget approved by the Board of Directors, the fund is committed to pursue an increase of its assets under management, supporting the continued development of its activities.

On the basis of the financial projections, the fund will continue as a going concern.

SFDR (Sustainable Finance Disclosure Regulation)

The periodic disclosures for the financial products referred in Article 8 and Article 9 of Regulation (EU) 2019/2088 are available in Annex IV and V of the section Additional unaudited information.

NEF

REPORT OF THE *REVISEUR D'ENTREPRISES AGREE*

Opinion

We have audited the financial statements of NEF (the "Fund") and of each of its sub-funds, which comprise the statement of net assets and the statement of investments and other net assets as at December 31, 2025 and the statement of operations and changes in net assets for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements give a true and fair view of the financial position of the Fund and of each of its sub-funds as at December 31, 2025, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

Basis for Opinion

We conducted our audit in accordance with the Law of July 23, 2016 on the audit profession (Law of July 23, 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the *Commission de Surveillance du Secteur Financier* (CSSF). Our responsibilities under the Law of July 23, 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "Responsibilities of the *réviseur d'entreprises agréé* for the Audit of the Financial Statements" section of our report. We are also independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and have fulfilled our other ethical responsibilities under those ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Other information

The Board of Directors of the Fund's Management Company is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our report of the *réviseur d'entreprises agréé* thereon.

© Deloitte Audit, SARL

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund's Management for the Financial Statements

The Board of Directors of the Fund's Management Company is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund's Management Company determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund's Management Company is responsible for assessing the Fund's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund's Management Company either intends to liquidate the Fund or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the *"réviseur d'entreprises agréé"* for the Audit of the Financial Statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the *réviseur d'entreprises agréé* that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law dated July 23, 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law dated July 23, 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

Deloitte.

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund's Management Company .
- Conclude on the appropriateness of the Board of Directors of the Fund's Management Company use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our report of the *réviseur d'entreprises agréé* to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our report of the *réviseur d'entreprises agréé*.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Manager's Report (unaudited)

Market review

Global equity markets ended 2025 with notable strength, with the MSCI World Index delivering a quarterly return of just over 3.2% and closing the year with a robust 21% gain in gross USD terms. The strengthening of the euro over much of the year reduced translated returns for EUR-based investors, resulting in a more moderate 6.8% gain for the MSCI Developed World Index in euro terms. This marked the third consecutive year of unusually strong equity market performance, a pattern not seen since the late 1990s. For the first time in several years, international markets such as Europe, Japan, and emerging economies outperformed the US, although US returns themselves remained solid.

Market dynamics were once again heavily influenced by advances in AI and related technology sectors, with the technology segment—led by mega-cap US and global firms—outperforming as the AI investment cycle broadened. At the sector level, the strongest contributions came from underweights in Materials and Energy, reflecting global supply imbalances and muted oil prices, as well as targeted exposures in Industrials and Technology. Geopolitical risks persisted but remained manageable; tensions between Russia and Ukraine continued without material escalation, while progress in EU trade negotiations supported optimism around supply chain stability and export growth heading into 2026.

At the country level, the US was the largest contributor, supported by robust consumer spending and resilient corporate earnings. Japan also delivered strong results, with Japanese bank holdings outperforming amid supportive policy. US technology names benefited from the AI-driven rally. Conversely, Denmark and its pharmaceutical sector detracted due to weak pricing power, while the UK lagged on commercial services exposure. Germany and France were also among the largest detractors within developed markets, facing headwinds from slower industrial production, softer economic data, elevated energy costs, and geopolitical uncertainties linked to regional conflicts.

Information technology remained the primary driver of benchmark gains, with performance closely tied to the AI theme. As the global rally broadened, sectors such as Industrials and Financials began to participate more meaningfully, reflecting renewed investor appetite for areas leveraged to economic recovery, capital investment, and stable earnings. From a style perspective, core quantitative factors—including momentum and value—performed strongly toward the end of the year.

Performance review for the Fund

Kinross Gold was among the strongest contributors, supported by higher gold prices and solid earnings delivery. In contrast, Novo Nordisk detracted as European pharmaceutical names faced sector-wide headwinds and pricing pressures. Model-driven signals were particularly effective in identifying momentum and scenario-based opportunities among top performers, while detractors tended to reflect negative macro and sentiment overlays affecting more defensive or regulated industries.

An ethically restricted name, Tesla, was the largest detractor since the fund’s launch. The stock outperformed on the back of strong electric-vehicle deliveries and successful new model launches. Although the exclusion of certain names such as Tesla weighed on relative returns, the systematic investment process is designed to limit the impact of such restrictions. The optimisation framework reallocates capital dynamically across the eligible universe-after applying ethical screens-to minimise unintended factor exposures.

The portfolio ended the year with notable overweights in Information Technology, Financials, and Communication Services, consistent with an emphasis on innovation, financial resilience, and digital transformation. Underweights in Consumer Discretionary, Industrials, and Health Care reflected a more cautious stance toward cyclical segments and areas facing structural or defensive challenges. Country positioning favored the United States, Italy, and Japan, while Switzerland, France, and the United Kingdom were underweighted, aligning the portfolio with markets demonstrating stronger growth resilience and away from regions experiencing slower recoveries or less attractive sector dynamics.

NEF Ethical Euro Equity (ex NEF Euro Equity)

Manager's Report (unaudited)

Market Review

Eurozone equities had an incredibly strong year in 2025, gaining +23.7% (MSCI EMU, EUR).
2025 felt like the ushering in of a renaissance moment for Europe, with politicians urgently collaborating to tackle common challenges and implementing investment initiatives aimed at strengthening their economies. While the benefits of this won't be felt immediately, it has the potential to create lasting positive impacts on corporate earnings. As a result, global investors began reassessing their previously underweight allocations to European assets, leading to renewed investment flows into the region. It is noted that current inflows represent only a fraction of the outflows seen from European funds in 2022, suggesting room for further flow-driven tailwinds as US diversification trends persist among global investors.

While US optimism was high at the end of 2024, concerns rose in Q1 2025 due to tariffs and federal spending cuts, leading to a pessimistic outlook for US consumers. In contrast, Germany's substantial stimulus announcements, including a large spending package focused on infrastructure and economic support measures, along with further fiscal commitments from other European governments and the EU, provided a positive catalyst for Europe.

Performance review for the Fund

In 2025 the Fund underperformed its benchmark. On average, the companies held in the portfolio did not lag the market in terms of earnings revisions. The underperformance was instead attributable to multiple expansion in stocks not held and multiple compression in certain holdings. The opportunity set ahead appears constructive, as some of the pressures experienced in 2025 are not expected to recur to the same extent. This underpins confidence in the ability to achieve the targeted long-term outperformance.

Negative sector allocation effects came from being overweight in Information Technology and Consumer Discretionary as well as an underweight within Utilities. These were partially offset by positive effects from an underweight to Consumer Staples, as well as being overweight to Financials and Industrials.

At a stock level:

The portfolio's semiconductor and data center exposures (e.g. ASML, ASMi, Be Semiconductor, Schneider Electric) were detractors as shares fell on a combination of the market digesting a set of mixed results as well as suffering from the market selling anything related to AI and data centers post DeepSeek in Q1. In September, semi-cap shares bounced in hopes for a recovery spurred by the Oracle/Open AI deal, rising memory chip prices, and perceived need for capacity build out. This move proved costly for performance as a holding in ASML had been reduced to underweight.

IMCD and Linde detracted as reduced industrial activity persisted with demand and volume recoveries pushed out yet again.

Several consumer-related holdings, including luxury names such as LVMH, Hermès and Ferrari, as well as mass-market exposure through Adidas, were among the main detractors. Part of the weakness reflected broader softness in consumer demand during the year, while additional pressure stemmed from stock-specific factors. Ferrari, for instance, declined following a disappointing capital markets day in October, where management's outlook was viewed as underwhelming. Although the company typically embeds a high degree of conservatism in its guidance, the update raised questions regarding the long-term growth trajectory and the appropriate valuation in light of a reset growth profile. Adidas continues to look like a good value opportunity, yet a slow down in some markets has been noted by the market and reduced our conviction as well.

European banks illustrate a clear value-change dynamic. Conviction in an improving operating environment, stronger capital positions, enhanced capital returns, and the potential for a re-rating made the sector one of the portfolio's largest overweights. A broad group of European banks held in the portfolio (Caixabank, Commerzbank, UniCredit, AIB, ABN Amro, KBC) delivered strong returns, with momentum in the sector continuing. Company results showed solid progression in Net Interest Income, supported by favourable trends in deposit and loan growth, which improved visibility on future earnings. Excess capital continues to be returned to shareholders, while valuations remain undemanding.

Market Outlook

Within the portfolio, the focus remains on fundamentals, with room for the strategy's quality-growth tilt to stand out as markets shift back toward rewarding companies that can deliver on earnings. The macro backdrop is relatively supportive, with steady US GDP growth, potential catalysts from Fed rate cuts, and early signs of improvement in Europe. Strong spending trends in areas such as AI and the energy transition are set to continue, though headline risk is still something to watch. Prospects for European cyclicals — including luxury and construction — are improving after a period of pressure from higher rates and cautious consumers. There is also interest in industrials outside the main secular-growth areas, where an upswing in the production cycle could support earnings in shorter-cycle businesses. Banks remain a high-conviction opportunity, trading at attractive valuations and benefiting from a favourable rate environment, with earnings supported by deposit and loan growth, fee-based activities, and cost initiatives.

Overall, the outlook remains constructive, reflected in the portfolio's pro-cyclical stance heading into 2026.

NEF Emerging Market Equity

NEF Emerging Market Equity

Manager's Report (unaudited)

Market Review

Emerging market equities delivered positive returns (in USD) over the reporting period, supported by a shift towards a more accommodative US monetary policy stance, a weaker US dollar and strong performance from technology-heavy markets. Korea and Taiwan outperformed, driven by technology-led gains, with Korea also benefitting from a favourable domestic political backdrop and strong corporate earnings, alongside foreign inflows and optimism around value-up reforms. Taiwan also performed well, aided by a rotation into technology stocks, continued AI momentum and strong export data. Brazil delivered positive returns amid an improving inflation outlook and growing expectations of an easing cycle, although gains were moderated by mixed economic data and heightened political uncertainty ahead of the 2026 elections. South African equities performed well, driven by currency strength and strong performance from gold and platinum group metal miners, alongside greater fiscal restraint. By contrast, Indian equities underperformed, reflecting currency depreciation, a weak consumption backdrop and limited progress on an India–US trade agreement. At the sector level, materials and information technology led gains, while health care and consumer staples lagged.

Performance review for the Fund

At the country level, stock picking in South Korea was the largest contributor to returns, though this was partly offset by the underweight exposure to the market. The portfolio's underweight stance in India and stock picking in Canada (via the mining exposure) also added value. By contrast, stock picking and the underweight positioning in South Africa was the largest detractor, alongside stock picking in China/Hong Kong. At the sector level, stock selection and the overweight positioning in materials contributed most to relative performance. The overweight exposure to information technology (IT) also enhanced gains. Conversely, the overweight stance in financials detracted the most, though this was partly offset by security selection in the sector. The portfolio's underweight positioning in consumer discretionary also held back gains.

Gold miners including South Africa's Pan African Resources, West Africa focused Endeavour Mining, and Colombia focused Aris Mining benefitted from the rally in the gold price, supported by the continued shift in central bank reserves away from US Treasuries, as well as strong retail demand for the precious metal. Pan African Resources also benefitted from the ramp of its new mine, which is expected to drive production growth and lower cash costs, whilst Endeavour Mining rallied after announcing a series of strong results with an increase in free cash flow.

The positions in Korean memory names Samsung Electronics and SK Hynix contributed after news of their strategic collaboration with OpenAI on the Stargate AI data centre project. Samsung also delivered strong quarterly earnings driven by solid performance in the memory chips business, while SK Hynix benefitted from strong quarterly results amid a strengthening DRAM commodity cycle. Taiwan's Chroma ATE, a manufacturer of testing equipment, also gained following strong quarterly results. By contrast, Taiwan Semiconductor Manufacturing Co (TSMC) weighed on relative returns, as the stock rallied over the period on upbeat earnings and optimism around AI-driven demand. We remain constructive on the stock, but a >10% position in the index means the portfolio is underweight by default. Taiwan's eMemory Technology, supplier of semiconductor IP, was also a drag during the period as growth was dampened by foreign exchange effects. However, continued expansion of the company's one-time programmable (OTP) IP business and rising penetration among semiconductor foundries support a strong growth outlook for 2026.

Mexico's Regional Bank declined as quarterly results came in slightly below expectations, primarily due to softer net interest revenue excluding fees and higher operating expenses. Despite this, we maintain a positive view on the stock, supported by the bank's strong fundamentals and attractive valuation. Indian financial holdings, consumer lender Home First Finance and asset manager Nuvama Wealth Management, also detracted. Home First Finance declined despite reporting in-line earnings, following a deterioration in asset quality in select tariff-impacted sectors, although this looks to be temporary. Nuvama also fell despite in-line results, following softer inflows and weaker transaction income in the private wealth segment. However, the company is set to benefit from the shift towards organized wealth management, supported by its strong client base. Encouragingly, Hungary's OTP Bank rose following a series of earnings beats, rising net interest income and the company's share buyback programme.

NEF Global Bond

NEF Global Bond

Manager's Report (unaudited)

Market review

The global bond market experienced a broadly constructive year in 2025, shaped by a combination of high starting yields, easing inflation pressures, and shifting monetary policy expectations. Throughout the year, fixed-income segments benefited from the carry provided by elevated yields, a dynamic that helped support returns even as macroeconomic signals evolved. In the US, the bond market's tone was notably positive, reflecting the supportive backdrop created by the Federal Reserve's late-year rate cuts and stable income generation across sectors.

At the same time, the US yield curve steepened meaningfully as short-term rates fell following the Fed's policy adjustments, while long-dated yields nudged slightly higher in response to concerns about longer-term growth trajectories. This pattern limited the performance of long-duration government bonds, which posted a slight decline in the final quarter even though their full-year return remained positive. Globally, yield movements were far from uniform: persistent inflation early in the year pushed developed-market yields higher across several regions - Germany's 10 - year Bund yield rose by 28 basis points, while the UK saw a 33-basis-point increase. Emerging-market sovereign yields showed even more volatility, with countries such as Brazil experiencing sharp increases, driven by domestic policy and economic divergence.

Performance review for the Fund

The overall slight underperformance is largely consistent with a year in which currencies played an important role. Global markets in 2025 saw a strong US dollar for much of the year and notable volatility across major FX pairs, including the yen and commodity-linked currencies, which created meaningful headwinds for internationally diversified portfolios. This aligns with the portfolio's FX drag, particularly the combined -45 bps from EUR,JPY and CAD and the additional -14 bps from emerging-market currencies, despite EM bonds themselves performing strongly. At the same time, the positive contributions from market allocation (+21 bps) and curve positioning (+8 bps) reflect the supportive fixed-income backdrop created by falling inflation, Fed rate cuts, and a steepening US yield curve, which favoured short and intermediate duration exposures. The small -5 bps duration impact is consistent with the fact that long dated yields rose slightly late in the year, limiting gains for longer-duration positioning. Credit exposure also added value, with +5 bps from credit and +1 bp from EM credit, which matches the broad strength of spread sectors in 2025, supported by tight spreads, low defaults, and strong EM performance. Euro bond selection's modest +2 bps gain fits into a year where credit-sensitive European assets benefited from global risk appetite and a weaker dollar. In short, the attribution reflects a year in which core allocation and credit decisions were directionally right, but currency dynamics, especially JPY, CAD, and EMFX, overwhelmed those positive contributions, explaining the portfolio's slight underperformance despite fundamentally sound positioning.

Market outlook

Looking ahead, fiscal policy is likely to do the heavy lifting, particularly in the US, Germany and Japan, with monetary policy having shifted from restrictive to neutral in most economies. Hence, consumption, labor markets and the inflation environment will drive policy decisions, while AI related investments will attract greater market scrutiny. Geopolitics can be a swing factor via oil prices as well.

In the US, higher income tax refunds slightly improve the growth outlook in H1 2026 but do not change the prospects beyond that. We have slightly upgraded our 2026 growth projections, but the narrative remains that of below-potential growth. Consumption will be weaker than in 2024 and 2025, but that reflects a softening rather than collapse of the labor market. Leadership uncertainty persists at the Fed, but what is clear is that the new leader will be more dovish. Monetary policy will remain accommodative, and our projection is for two rate cuts by the Fed in 2026, one less than priced in by the market.

Our stance on the ECB remains for two cuts next year. This contrasts with market expectations. We believe the growth outlook for the euro area is subdued and the ECB may be underestimating the negative impact of US tariffs on European exports. Japan needs a firmer path of rate normalization to see capital repatriation. We believe the BOJ will raise rates at least once next year. But for a sustainable increase in nominal and real yields, the BOJ needs to signal a stronger commitment to rate normalization, which seems unlikely at this stage.

Manager's Report (unaudited)

Market Review

The first quarter was marked by volatility in bond markets amid significant uncertainty stemming from US trade policies. The year began with reduced expectations for Fed rate cuts and a higher risk premium due to potential impacts of Trumponomics. Central banks diverged in their approaches: the Fed, considering non-recessionary macro data, inflation above expectations, and the need to monitor trade policies, remained on hold, endorsing a “wait and see” stance. Conversely, the ECB cut rates twice (-50 basis points in total) and reiterated its accommodative, data-dependent stance, signaling potential further easing based on expectations of inflation reaching target by 2025 and a stagnant economy facing downside risks from tariffs. Geographically, the portfolio maintained an overweight in European peripheral debt (notably Italy and Spain), a clear underweight in France, and a broadly neutral stance on Germany.

The second quarter was characterized by volatility driven by US trade policies and geopolitical tensions, which markets quickly absorbed, primarily due to the US’s 90-day tariff pause announced on April 2 and President Trump’s willingness to negotiate with trade partners. Central banks recognized that inflation remained benign (tariffs had yet to impact prices), declining in Europe and, albeit less steadily, in the US. The ECB, having reached its inflation target and after further rate cuts (-0.5%), was positioned to pause before further action, while the Fed preferred to assess tariff effects on consumer prices and showed no urgency to cut rates. Risky assets rebounded, recovering from initial declines. In bond markets, European yields fell, while US short-term yields declined and long-term yields rose. The macro backdrop continued to support a positive duration view, though ongoing tariff uncertainties and geopolitical tensions necessitated active risk management.

Over the third quarter, US yields experienced a curve flattening: short-term rates fell as the market priced in a higher probability of future Fed rate cuts, while long-term yields declined on carry dynamics and short-covering amid relatively light long-duration positioning. In contrast, the euro-area curve moved higher, particularly at the long end, as short-term yields rose following less-accommodative ECB commentary and medium-to-long yields were pushed up by expectations of increased fiscal spending, larger German issuance and political uncertainty in France. Corporate credit in both euros and dollars remained resilient across investment-grade and high-yield segments, with spreads compressing most markedly in riskier buckets against a backdrop of macro data that tempered the prospect of a sharp global growth slowdown. Emerging-market sovereign issuance in hard currency was well received, with yields and spreads tightening in line with expectations of a more accommodative Fed and a softer dollar; the US dollar only marginally strengthened versus the euro and stayed weak relative to recent years. Oil traded lower on concerns of increased OPEC supply, while gold rallied, supported by looser monetary-policy expectations, a partial shift away from the dollar among some investors and ongoing questions around central-bank independence.

Fourth quarter saw heightened volatility in developed-market sovereign bond markets, with yields broadly higher—particularly at the long end. In the US the curve steepened: short-term yields fell more on expectations of an accommodative policy stance, while long yields rose marginally beyond the 15-year segment amid concerns over public-debt dynamics. We expect two ECB cuts in H1 2026, driven by the lagged impact of tariffs and the negative effects of redirected Chinese exports on European growth, which could combine to produce weak growth and inflation slipping below target. Corporate credit in both Europe and the US has shown resilience across segments, with spreads broadly stable and yields following sovereign moves (notably Euro-curve increases, especially in IG).

In terms of portfolio positioning, we favoured peripheral sovereign exposures to Italy and Spain and kept French government debt significantly underweight. Given current bond valuations, we continue to prioritize credit within fixed income. We favor corporate bonds maturing in three to seven years, with a primary focus on issue in the financial sector. Main overweights: Banking Tier 2, Covered Bond, Banking SNP and Banking SP.

Performance review for the Fund

The Fund delivered a positive absolute return in 2025, outperforming its benchmark. Allocation effects were broadly neutral, while security selection contributed positively, driven mainly by selection among corporate bonds.

NEF Emerging Market Bond

NEF Emerging Market Bond

Manager's Report (unaudited)

Performance review for the Fund

The Fund underperformed the benchmark in net terms. The main contributors to performance during the year were overweights in Nigeria. Other contributors were Saudi Arabia, where security selection in some of the Pipeline operators added performance, whilst underweight in other low beta issuers also added performance. On the negative side, the largest detractors were Brazil where the fuel producer Raizen added negatively whilst Ivory Coast and Colombia also detracted. During the year, the most significant reductions were in the Philippines, Indonesia, and Ivory Coast. The Fund's largest additions were in Poland, Turkey, Peru, and Mexico, alongside an increased allocation to Galaxy Pipelines in Saudi Arabia.

The largest underweight positions were still in less attractively valued Middle Eastern and Asian countries. The largest overweights were concentrated in Latin America and Eastern Europe. The portfolio had an allocation of around 8% to corporate bonds. The high yield allocation was 26% vis a vis a benchmark high yield exposure of 29.74%.

Market outlook

With trade tensions no longer the primary market driver, the market focus has now shifted firmly to the Federal Reserve and the post-2025 easing path. The US labour market has softened more than previously thought, with the Bureau of Labor Statistics revising past job gains down materially and payroll growth remaining subdued since spring. This reassessment underlines that Fed policy will be the decisive driver of global rates and capital flows in the months ahead. At the same time, the noise around Fed Board composition and perceived independence has become a market variable, with the potential to add a political risk premium to rates and the dollar even when the macro data are not decisive.

Hard-currency EM debt is offering historically attractive yields close to 7%, a level that should continue to draw inflows into the asset class, particularly in a more supportive global macro environment where valuations across most fixed income spread sectors appear rich. After widening to nearly 400bps in April 2025, EM sovereign spreads have tightened to around 250bps. Assuming US 10-year Treasury yields trade in the 3.80%–4.20% range and EM spreads remain between 240–300bps, hard-currency EM debt is expected to deliver returns of 5%–10% over the next 12 months.

Manager's Report (unaudited)

Performance review for the Fund and market review

The year 2025 was characterised by a broad decline in risk premiums. Against this backdrop, bond segments offering a spread over traditional high-quality government bonds were favoured throughout the year. As a result, the portfolio maintained significant exposure to corporate bonds, covered bonds, and government bonds from the Eurozone periphery.

Periods of heightened caution were nevertheless required. Ahead of specific events-such as the so-called Liberation Day announcement, when US President Donald Trump unveiled tariff plans-tactical adjustments were made, followed by renewed activity in the secondary market once conditions stabilised.

Demand in the primary market remained exceptionally strong. Order books were frequently substantial, enabling issuers to tighten spreads and predominantly offer longer-dated maturities. This dynamic limited the availability of suitable instruments for a short-term fund, making the secondary market an important source of opportunities. Toward the end of the year, cash positions were deliberately increased to remain well positioned for potentially favourable market conditions in the spring.

Within Eurozone government bonds, exposure to German and French sovereign debt was kept clearly underweight. German Bunds were unattractive from a yield perspective, while concerns about France centred on fundamental weaknesses at the sovereign level. In contrast, corporate issuers in France remained fundamentally sound, reflected in relatively low spread volatility. Italian BTPs continued to be held at an overweight position, supported by solid fundamentals and stable credit ratings during the reporting period.

Corporate bonds and covered bonds represented overweight positions throughout the year. The credit environment in Europe remained constructive, with fundamentals generally intact despite tighter spreads. The portfolio also incorporated Green, Social, and Sustainability Bonds within the fixed-income holdings. Duration was actively managed within a range of 3.7 to 4.5 years.

Market outlook

Spread dynamics are expected to remain the dominant driver in 2026. Instruments offering a risk premium are likely to remain preferred, supported by a stable market environment. Although spreads are tight, they are not excessively so, and underlying fundamentals remain resilient. The European Central Bank is expected to adopt a wait-and-see stance, with no policy rate changes anticipated before 2027. This should continue to provide a supportive backdrop for spread products. Yields and coupons are expected to remain broadly in line with the previous year.

A second source of performance is likely to come from curve positioning. A targeted allocation to slightly longer maturities-up to around five years-should allow investors to benefit from roll-down effects and generate additional return potential.

Manager's Report (unaudited)

Performance review for the Fund

The Fund delivered an annual positive return, although it underperformed its benchmark.

In relative terms, the top detractor was stock picking. In detail, on the equity space selection was negative primarily in Consumer Discretionary, secondly in Industrials, Communication Services, Energy and Financials, which more than offset the positive contribution coming from stock picking in Materials and Information Technology. On the bond space, positive contribution from the preference for Italy in Government bonds; marginal negative contribution from selection in corporate.

The Fund maintained an overweight exposure to equity, concentrated on Italy, with a preference for Large-Cap versus SMID cap.

In the first part of the year, the overweight exposure in equity was reduced with a rotation from cyclical names (e.g. energy, financials) to more defensive ones (utilities, communication services). At sector level, the Fund maintained an underweight in Consumer Discretionary, particularly in the luxury segment and the automotive sector. The exposure to Utilities was increased marginally to overweight (from neutral).

At the end of the second quarter, the Fund maintained an overweight in Technology, Healthcare, Materials; in Consumer Discretionary, the Fund maintained an underweight in the luxury segment and a marginal overweight in the automotive sector. In Financials, the Fund maintained an overweight to mid-cap institutions sensitive to M&A operations and to large institutions that are less exposed to interest margin dynamics. Finally, the Fund maintained an underweight in Communication Services and Industrials.

During the third quarter, the overweight in equity was reduced to a low level. The portfolio structure was made more balanced, with a general reduction of deviations from the benchmark at the sector level. The fund maintained an overweight in Technology and Materials. The exposure to Consumer Discretionary was increased from Underweight to Overweight, increasing the exposure in the luxury segment and marginally the overweight in the automotive sector. The exposure to Financials was reduced to marginal Underweight. The exposure to Healthcare and Consumer Staples was close to Neutral. The Fund presented an Underweight in Communication Services, Energy, Utilities and Industrials.

During the fourth quarter, the overweight in equity was confirmed. The portfolio structure was made more cyclical, even if the level of deviations from the benchmark at the sector level remains low. During the period, the exposure to Cyclicals was increased (in detail, industrials, consumer discretionary – auto); the exposure to Defensives was reduce (in detail, utilities). The Overweight to Financials was increased, increasing the exposure to banks and reducing the exposure to insurance.

The Fund ended the period with an Overweight in Consumer Discretionary, Financials, Technology. The exposure to Healthcare and Consumer Staples was close to Neutral. The Fund maintained an Underweight in Energy, Utilities and Communication Services.

In the fixed income space, the Fund maintained an overweight in terms of duration. The Fund maintained an underweight on government bonds (with a preference for Italy and limited positions in Germany, Spain, and France) and an overweight on credit in terms of weight.

In the credit space, at sector level, the Fund maintained an overweight mainly in Financials (with a preference for senior issuances) and Utilities. The exposure to credit space was increased during the first quarter by participating in the primary market with attention to the relative value analysis. In terms of ratings, the Fund maintained a preference for IG.

Manager's Report (unaudited)

Market review

The US equity market delivered solid gains of 17.1% for the year in local USD terms. Although the US market performed well in USD, the strengthening of the euro over much of 2025 reduced translated returns for EUR-based investors. As a result, the MSCI Developed US Index in EUR terms posted a more moderate gain of 3.4% in 2025. Despite the currency headwind, the strong performance of US equities remained a key driver of global developed market results for the year.

A defining feature of 2025 was the evolving trajectory of US monetary policy. While the Federal Reserve paused its tightening cycle in the first quarter, the prospect of eventual rate cuts grew over the year as inflationary pressures showed signs of abating. This shift shaped global asset flows, benefiting US equities and other developed market assets as investors repositioned portfolios in anticipation of lower yields. However, the transition was gradual, and intermittent hawkish signals kept volatility elevated, particularly in rates-sensitive sectors.

AI continued to dominate and drive equity markets. Despite the DeepSeek-induced capex over-spending fears in January, tech and AI-related companies drove a large share of market gains.

Geopolitical tensions remained a constant undercurrent in 2025. Early April saw a sharp sell-off linked to sweeping tariff policies, wiping out trillions in market value before markets recovered later in Q2. Ongoing frictions between the US and China over trade and technology, as well as renewed instability in the Middle East, drove periodic market swings and contributed to the uneven performance across regions and sectors.

Despite all these developments the U.S. economy grew at the strongest rate in 2 years – the US GDP growth of 4.3% was driven by surging consumer spending (services like Health care), increased exports, and government spending, despite some investment dips.

The Information Technology sector delivered the most significant contribution to developed market returns in 2025. Communication Services also contributed positively, supported by increased demand for digital content, advertising, and continued industry consolidation. Industrials saw gains as well, reflecting renewed strength in logistics, aerospace, and supply chain services. Financials posted modest gains on the back of resilient credit quality and increased capital market activity. On the negative side, Consumer Discretionary and Consumer Staples sectors detracted from benchmark performance, hampered by uneven consumer spending, rising input costs, and persistent margin pressure across several industries. Real Estate and Energy also lagged, with higher financing costs, increased regulatory scrutiny, and volatile commodity prices weighing on performance.

Performance review for the Fund

At the sector level, positioning within Information Technology-particularly in areas with meaningful AI exposure-provided a balanced mix of positive contributions. Gains were strongest in software and semiconductor holdings, while avoiding names viewed as vulnerable to “AI at risk” dynamics also proved beneficial. Select exposures within Financials and Health Care added further support, driven by overweight positions in diversified financials and health-care services.

Among individual stocks, LAM Research Corp was a leading contributor. The overweight position benefited from strong semiconductor demand and favourable momentum indicators, including alternative data signals related to market activity and sentiment. Machine-learning-based models captured improving investor perception and operational strength, reinforcing the stock’s positive contribution.

An ethically restricted name, Tesla, was the largest detractor since the fund’s launch. The stock outperformed on the back of strong electric-vehicle deliveries and successful new model introductions. Although the exclusion of certain names such as Tesla weighed on relative returns, the systematic investment process is designed to minimise the impact of such restrictions. The optimisation framework reallocates capital dynamically across the eligible universe-after applying ethical screens-to limit unintended factor exposures.

By year-end, the portfolio maintained overweights in growth, momentum, and size, with these factors contributing meaningfully on a risk-adjusted basis. Sector positioning reflected overweights in Communication Services, Financials, and Information Technology, while Consumer Discretionary-particularly Amazon and Tesla-along with Utilities, Energy, and Real Estate remained underweighted. This configuration aligned with an emphasis on innovation and cyclicality, supported by an adaptive approach to evolving market and consumer trends.

NEF Pacific Equity

Manager's Report (unaudited)

Market Review

Asia Pacific equities experienced significant volatility over the year, driven largely by uncertainty around US tariff policies and global trade. Chinese and Hong Kong markets performed strongly, supported by renewed investor optimism around China's innovation-led progress and easing US–China trade tensions, despite mixed economic data. Improved liquidity conditions also underpinned gains in Hong Kong. Technology-focused Taiwanese and South Korean markets saw significant foreign inflows amid sustained global demand for Artificial Intelligence (AI)-related infrastructure and advanced chips, alongside strong corporate earnings from major technology companies.

Elsewhere in the region, Japanese equities ended higher, aided by easing tariff concerns and expansion in AI-related investment. Ongoing corporate governance reforms, domestic reflation trends, and a weaker yen continuously supported the market's upward momentum. Australian equities also delivered positive returns, benefiting from foreign inflows, relatively limited exposure to trade tensions, and rising commodity prices. Within ASEAN, investor sentiment toward Indonesia was dampened by political uncertainty, while Singapore advanced strongly, benefiting from robust corporate earnings and its perceived safe-haven status amid regional volatility.

Against this backdrop, the strategy returned 21.6% (gross of fees), outperforming its benchmark MSCI AC Pacific index, which returned 16.5%. The outperformance was underpinned by robust stock selection, particularly in health care and materials sectors. At a country level, our preferred Japanese holdings contributed positively, while selected names in South Korea held back gains.

Performance review for the Fund

AI related theme remained a dominant performance driver in 2025, supporting strong returns across digital infrastructure, semiconductors, and other enablers in the value chain. Chinese leading internet data centre (IDC) services provider VNET advanced strongly, supported by accelerating AI-driven demand for cloud infrastructure and data processing capacity. Similarly, exposure to Elite Materials proved beneficial, as rising AI-related demand underpinned earnings momentum in advanced materials used across high-performance computing supply chains. Conversely, the portfolio's underweight positions in key AI hardware beneficiaries weighed on relative performance. Not holding memory chip manufacturer SK Hynix detracted as the stock advanced sharply on surging demand for AI infrastructure components, particularly high-bandwidth memory (HBM) chips. An underweight exposure to Taiwan Semiconductor Manufacturing Company (TSMC) also held back gains. Its shares rose on an upbeat earnings outlook supported by accelerating AI-driven demand for advanced logic chips. In addition, a lack of exposure to Alibaba weighed on relative returns as investor enthusiasm around AI intensified following the company's increased capital commitment to AI development and the announcement of a strategic partnership with Nvidia.

Select fintech holdings contributed meaningfully to performance. South Korea-based Kakao Pay performed strongly, supported by investor optimism surrounding the new government-led "Sovereign AI" initiative and anticipated digital finance reforms. As a leading payments platform, Kakao Pay is viewed as a primary beneficiary of a proposed KRW-based stablecoin, which strengthened sentiment. Within China, the position in Lexinfintech strengthened as its shares attracted renewed interest from institutional investors amid attractive valuations.

Shares in Japanese biotechnology company Helios K.K. rallied, supported by several key clinical milestones. These included a conditional approval filing for its stroke therapy, entry into a global ARDS clinical trial, and the award of a government subsidy to expand its CDMO operations, all of which bolstered investor confidence.
By contrast, PolyNovo detracted from returns after announcing a CEO transition, which introduced near-term leadership uncertainty. The decline was compounded by heightened volatility across Australian healthcare stocks. Additionally, Genetic Signatures weighed on performance amid a broad sell-off in Australian biotech stocks.

An underweight position in Meituan proved rewarding as the stock declined due to intensified price competition and margin pressure stemming from aggressive price wars in the food delivery industry. Dialog Axiata, Sri Lanka's leading telecom operator, advanced following the release of its robust first half financial results. Growth in data and voice services, coupled with operational efficiencies underpinned the strong performance.

NEF Ethical Corporate Bond - Euro

Manager's Report (unaudited)

Market review

The year 2025 was characterized by a continued normalization of monetary policy, moderating inflation dynamics, and shifting investor focus towards growth differentials and fiscal sustainability. Central banks across developed markets progressed further into their easing cycles, albeit at a measured pace, as inflation moved closer to target while economic growth remained uneven.

In the United States, the Federal Reserve continued its rate-cutting cycle initiated in late 2024, implementing several additional reductions during the year as inflationary pressures eased and labour market conditions softened. By year-end, policy rates stood meaningfully lower than their 2024 peak, supporting risk assets despite episodes of renewed volatility linked to fiscal policy uncertainty and geopolitical developments.

The European Central Bank followed a similarly cautious path, delivering further incremental rate cuts during 2025 as euro area inflation continued to decelerate and growth remained subdued. By the end of the year, policy rates had declined further, reinforcing a supportive backdrop for European fixed income markets.

Despite the broader easing trend, government bond yields experienced periods of volatility. In the US, yields declined during the first half of the year on softer macroeconomic data, before rebounding intermittently amid concerns over fiscal discipline and debt issuance. Europea.n yields followed a more stable trajectory, benefitting from weaker growth momentum and a clearer disinflation path.

Investment grade credit delivered positive performance in 2025, supported by continued spread tightening and resilient fundamentals. Despite intermittent volatility stemming from macroeconomic uncertainty and geopolitical risks, spreads ended the year tighter, while carry remained a meaningful contributor to returns. As a result, the benchmark ICE EUR corporate bond index generated a positive total return of 3.03% (EUR hedged).

From a sector perspective, Financials continued to perform well, supported by solid capitalization and stable earnings, while interest-rate-sensitive sectors such as REITs benefitted from lower policy rates. Our small allocation to high yield resulted in a positive return given the substantially carry, which remains the main contributor for performance in 2025 and going forward.

Credit fundamentals remained robust overall, with corporate balance sheets largely stable and leverage metrics contained. Rating momentum stayed positive across both the crossover and investment grade universes, extending the multi-year trend of net upgrades.

Performance review for the Fund

As of end-2025, the Fund delivered a positive performance.

The main drivers of performance were a positive carry effect while also benefiting from spread tightening across investment grade. The sector allocation with overweight in financial institutions performed well by solid capitalization and stable earnings. The yield curve effect within the fund was slightly negative given the underweight at the start of the year at the short term, which was the most impacted by the interest rates cuts by the ECB. The portfolio remained slightly underweight at the longer end of the interest-rate curve, reflecting expectations of further steepening driven by the fiscal stance in Europe.

Market outlook

For 2026, the outlook for EUR Investment Grade credit appears moderately constructive, supported by stabilizing inflation and a gradual normalization of monetary policy. Credit spreads are expected to remain range-bound but biased tighter as the ECB maintains a stable interest rate forecast for 2026.

Corporate fundamentals should stay resilient, with leverage stabilizing after the 2025 volatility and refinancing needs manageable despite higher funding costs. Slowing but positive eurozone growth is likely to constrain defaults, keeping IG credit risk relatively contained.

However, elevated geopolitical tensions and ongoing U.S. trade frictions may generate periodic spread volatility. Increased fiscal spending across Europe, particularly in defense and industrial policy, could lift issuance volumes but should be absorbed by strong demand from insurers and pension funds. Technicals remain supportive as global investors continue to seek high-quality yield.
Overall, the asset class is expected to deliver steady income-driven returns with limited capital appreciation.

NEF Ethical Balanced Dynamic

NEF Ethical Balanced Dynamic

Manager's Report (unaudited)

Performance review for the Fund

The Fund delivered a positive absolute return in 2025, slightly overperforming the benchmark. In relative terms, the top contributors were the overweight exposure to US equity, the overweight exposure to Italian government debt against the German Bund and US stock picking; while the top detractors were the stock picking in Europe, the underweight exposure to global equity ex Europe and US.

The overall contribution from fixed income was positive, the main contributions coming from the overweight exposure to BTPs against the German Bund, credit selection and the overweight exposure to credit.

The forex overlay gave a positive contribution too, thanks to the overweight exposure to the Euro against other currencies.

The year-to-date contribution from the equity component was negative, mainly due to the stock picking in Europe, which more than offset the positive contribution of the stock picking in US and the overweight allocation to US equity. The overweight exposure to European equity gave a positive contribution too, while the underweight exposure to global equity ex Europe ex US detracted.

Manager's Report (unaudited)

Market overview

After an initial decline, US government bonds began trending upward from mid-January to early April, with rising prices largely reflecting concerns about the economic outlook. In April, the announcement of extensive tariffs by the Trump administration briefly triggered a surge in risk aversion, prompting strong demand for US Treasury bills. The situation reversed quickly, as the potential negative impact of the measures on the US economy led to significant losses in both equity and bond markets. The yield on the 10-year US Treasury rose sharply from 3.9% to a peak of 4.6%.

The Federal Reserve maintained its key policy rate within the 4.25–4.50% range for an extended period despite mounting political pressure to cut rates. Speculation about monetary easing intensified after Chair Powell's remarks at the Jackson Hole symposium in August. The Fed subsequently lowered the federal funds rate three times by 25 basis points each, bringing it to 3.50–3.75%. As a result, the yield on the 10-year Treasury fell from 4.6% at the beginning of the year to around 4.15% at year-end. The broader market, as measured by the J.P. Morgan Global Bond US Index, gained 6.2% in 2025.

Eurozone government bonds delivered a more subdued performance. The iBoxx Euro Sovereign Index returned 0.6%. The relative weakness compared with the US initially reflected slightly stronger economic data and renewed hopes for a potential resolution of the conflict in Ukraine. Europe—and Germany in particular—approved substantial fiscal packages that, if implemented, could support investment. The yield on the 10-year German Bund rose by 50 basis points year-on-year to 2.9%.

Demand for European corporate bonds remained strong. The higher interest-rate volatility observed in sovereign markets was not mirrored in credit markets, where risk premiums continued to decline and reached a yearly low in October. The ICE BofA Euro Corporate Index (ER00) gained approximately 3.0% over the reporting period.

Equity markets fluctuated between solid fundamentals, uncertainty stemming from US policy decisions, and recurring questions about the profitability of artificial intelligence applications. In early April, the announcement of high reciprocal tariffs on all imports for "Liberation Day" triggered sharp market declines, prompting the administration to suspend the measures shortly thereafter. A strong recovery followed from May to October, interrupted only briefly in November.

Over the reporting period, the MSCI World Index gained 16.9% in local currency terms. US equities underperformed global peers during periods of pressure on the technology sector. The S&P 500 rose 16.4%, the Dow Jones Industrial Average 13%, and the Nasdaq Composite 20.4%. In Europe, the EURO STOXX 50 gained 18.3%, while the German DAX 40 advanced 23%. Japan's Nikkei 225 rose 26.2%, and emerging market equities, measured by the MSCI Emerging Markets Index, increased 28.3%.

Performance review for the Fund

The Fund entered 2025 with an equity allocation just below 22%. This was reduced to around 17% in April during the correction triggered by tariff announcements. As markets recovered, the equity share was gradually increased to as much as 23% and remained within a narrow 22–23% range for the rest of the year. At year-end, the allocation stood just below 23%. Adjustments in individual securities were made across sectors and regions as part of active stock selection.

In fixed income, the portfolio remained predominantly invested in corporate bonds. Their weighting increased further through purchases of sustainable financial and industrial issues, while exposure to covered bonds was reduced. Green, Social, and Sustainability Bonds were added to the direct fixed-income holdings throughout the year. The average duration of the bond portfolio was actively managed between 3.7 and 4.5 years.

Market outlook

The outlook for 2026 is mixed. The US is expected to maintain its strategic objective of reducing economic dependence on China—and, to a lesser extent, on the European Union—within the broader context of geopolitical competition. However, the unpredictability of US policy under President Trump is likely to increase uncertainty in the world's largest financial market. The midterm elections in November 2026 are not expected to provide significant clarity.

In fixed income, the combination of policy uncertainty and rising US government debt is likely to keep US Treasuries relatively unattractive. Yield curves are expected to remain steep, offering roll-down opportunities particularly in medium maturities. Corporate bonds, covered bonds, and peripheral or emerging-market debt appear attractive from both a yield and valuation perspective. Euro-denominated bonds may also draw increased interest from international investors seeking diversification away from the US dollar. High-quality corporate bonds continue to be viewed as a relative safe haven, supported by robust fundamentals in both the corporate and banking sectors.

Equity markets are expected to benefit from continued earnings growth. Given the significant weight of AI-related stocks, the theme—and the associated investment and profitability expectations—will remain a key driver. Stock selection is likely to gain importance as investors scrutinize the viability of financed projects more closely. As the economic recovery narrows the gap between the strong earnings growth of AI-related companies and the broader market, selective opportunities may arise in industrial, logistics, and service sectors.

NEF Target 2025 (merged on 13/06/25)

Manager's Report (unaudited)

Performance review for the Fund

The fund was merged in June 2025 into NEF Ethical Bond Euro.
At the end of May 2025, the Fund posted a slightly positive performance.
In terms of management, we reduced our exposure to credit (-24.52%) and increased our exposure to government debt (+15.65%).
This year was ultimately an excellent one, marked by numerous records for stock indices and gold. Buoyed by the enthusiasm for artificial intelligence, the US market for the 500 biggest stocks (S&P 500) gained 17.9% but was beaten for once by its counterpart in the Eurozone, with the Eurostoxx 50 index finishing at 22.1%.

NEF Ethical Global Trends

NEF Ethical Global Trends

Manager's Report (unaudited)

Performance review for the Fund and market review

During 2025, the Fund recorded a strong positive performance.

The Fund is characterized by investing in companies: 1) that adopt good practices in terms of ESG, with particular attention to the dynamics of the quality of practices; 2) whose activity is functional to the achievement of the Sustainable Development Goals; 3) that present an attractive valuation based on their net worth and/or their medium-long term earning opportunities. The Fund invests only in companies that are highly instrumental to the SDGs.

Geographically, the main contributors were France (+8.2%), South Korea (6.0%) and Germany (5.7%). In 2025, no geographical area contributed negatively.

From a sectoral point of view, *Financials* were the best contributors to the portfolio for the third consecutive year (+12.7%). Other sectors that contributed very positively were *Information Technology* (+5.0%) and *Communication Services* (+4.9%). The only sectors that negatively contributed to the portfolio during 2025 was *Real Estate* (-0.1%).

Turning to individual stocks, the main positive contributors included Société Générale (+3.41%), which benefited from a significant rerating driven by the improvement in its capital position; Samsung (+1.62%), supported by the ongoing AI trend; Barclays (+1.58%), helped by the interest-rate environment and expectations of deregulation in the US banking sector; and ThyssenKrupp (+1.39%), where the restructuring process has started to deliver initial results.

Among the negative contributors were Mobico (-0.38%), a major European transport group currently undergoing restructuring; WPP (-0.26%), a leading advertising company facing competitive pressures and concerns about the potential impact of AI on the sector; and Hapvida (-0.25%), a Brazilian life-insurance provider with an innovative business model that has yet to gain traction. During the year, exposure to the renewables, electric mobility, and financials sectors was reduced following strong performance. Conversely, positions in the airlines, semiconductors, staffing, and auto components sectors were increased.

During the year, the Fund maintained an overweight over Europe and Asia relative to the average allocation of global funds, and an underweight on the United States. This is due to the relative valuation of the markets and the significant weight of the US in the indices, which does not reflect the weight of the area in terms of GDP or its clear governance risks. As a result, exposure to the dollar was also lower than the average exposure of global funds, limiting the losses related to the depreciation of this currency over the course of the year. The objective of the Fund is always to provide the investor with a balanced and diversified exposure to global equity investments, including currencies.

The year was made volatile by the introduction of US tariffs during the spring and, more generally, by the unpredictable behaviour of the new US administration that led to the sharp depreciation of the dollar. The trade war with China has been particularly heated while Europe, Japan and Korea accepted President Trump's harsh tariffs.

The year has again seen a good performance in American megatechs while on the rest of the *growth* stocks the market has been more selective, mostly focusing on stocks exposed to AI. Among these, there are a significant number of *value stocks* in sectors such as *commodities, electrical equipment*, *energy and materials* that were significantly rerated as likely beneficiaries from the expected astronomic surge of investments in *datacentres*.

Emerging markets have generally performed well, particularly China and South Korea. The erratic behaviour of the Trump administration undoubtedly led a number of investors to diversify from the massive overweight on the US market. The attractive valuations at which global equity markets ex-USA traded helped the process. We believe that this reallocation process is not over and the fund continues to be here exposed.

The portfolio remains extremely diversified with around 300 stocks (250 at the end of 2024). The fund does not invest in stocks in autocratic countries, such as China, Turkey or Vietnam, or in countries that are not fully transparent about money laundering.

NEF Target 2028

Manager's Report (unaudited)

Market review

Despite the broader easing trend, government bond yields experienced periods of volatility. In the US, yields declined during the first half of the year on softer macroeconomic data, before rebounding intermittently amid concerns over fiscal discipline and debt issuance. European yields followed a more stable trajectory, benefitting from weaker growth momentum and a clearer disinflation path.

Global investment grade credit delivered positive performance in 2025, supported by continued spread tightening and resilient fundamentals. Despite intermittent volatility stemming from macroeconomic uncertainty and geopolitical risks, spreads ended the year tighter, while carry remained a meaningful contributor to returns. As a result, the Bloomberg Global Aggregate Credit Index generated a positive total return of 4.59% (EUR hedged).
From a sector perspective, Financials continued to perform well, supported by solid capitalization and stable earnings, while interest-rate-sensitive sectors such as REITs benefitted from lower policy rates. Regionally, European investment grade credit again outperformed on a total return basis, reflecting a more supportive rate environment and relatively attractive valuations.
Credit fundamentals remained robust overall, with corporate balance sheets largely stable and leverage metrics contained. Rating momentum stayed positive across both the crossover and investment grade universes, extending the multi-year trend of net upgrades.

The global high yield market also experienced a constructive year, benefitting from supportive technicals and a benign default environment. Spreads tightened further, and the ICE BofA BB-B EUR High Yield Constrained Index delivered solid total returns of 5.52%.
Performance dispersion across ratings persisted, with lower-rated segments outperforming higher-rated ones as investors continued to search for yield. Sector-wise, areas with stable cash flows and defensive characteristics performed best, while more cyclical sectors lagged amid uneven global growth.
Overall, high yield credit continued to be supported by improving refinancing conditions, declining funding costs, and manageable default rates.

Emerging markets (EM) external debt posted positive performance in 2025, supported by a favourable global liquidity backdrop and further spread compression. The JPM EMBIG Index delivered a positive total return of 11.61% (EUR hedged), as easing developed market monetary policy and stable commodity prices underpinned the asset class.
EM fundamentals remained broadly supportive, particularly within the investment grade segment, where sovereign balance sheets stayed resilient. EM high yield continued to outperform EM investment grade, driven by ongoing recoveries in previously distressed issuers and selective improvements in macroeconomic conditions. At the same time, idiosyncratic risks persisted, leading to differentiated performance across countries.

Performance review for the Fund

As of end-2025, the Fund delivered a positive performance.
Credit exposure and Italy were the main drivers of performance through a positive carry effect benefiting from spread tightening across investment grade and Italy. Interest rate exposure contributed was slightly negative as short term interest rates (3yr) slightly rose, resulting in a modest negative impact on overall performance.

Market outlook

Throughout 2025, the portfolio management team maintained a prudent and selective approach, continuing to focus on EUR-denominated Investment Grade credit and Sovereign exposure while preserving flexibility to navigate a changing macroeconomic environment. Exposure to high-quality sovereign bonds, including Italian BTPs, remained an important component of portfolio construction.
At year-end, the portfolio remained predominantly allocated to Investment Grade Credit, complemented by selective exposure to Government and Government-related securities, limited allocations to High Yield and Emerging Markets Debt, and a prudent liquidity buffer.
From a geographical standpoint, the portfolio continued to favour Europe, with a strong emphasis on core and peripheral euro area markets. Sector allocation within Investment Grade credit remained focused on issuers with strong earnings visibility, high barriers to entry, and resilient business models, including infrastructure-related assets, transportation, and selected consumer-related sectors.
Within High Yield, the team maintained a cautious stance, focusing on rising star candidates and issuers with stable cash flow profiles, while remaining underweight sectors exposed to cyclical pressures or structural challenges. Exposure to Emerging Markets Debt continued to be managed conservatively, favouring higher-quality issuers and markets with stronger fundamentals and more attractive risk-reward profiles.

Manager's Report (unaudited)

Market overview

In the United States, the combination of erratic economic and tariff policies under President Trump and concerns about a sharply rising national debt generated persistent volatility in the bond markets. The Federal Reserve kept the key policy rate largely within the 4.25–4.50% range despite increasing political pressure to cut rates. The first rate cut was delivered in September 2025, followed by two additional 25-basis-point reductions by mid-December, bringing the federal funds rate to 3.50–3.75%.

During the reporting period, the US yield curve shifted markedly lower in the short and intermediate maturities and became steeper overall. Concerns about the fiscal outlook-particularly after the approval of the *One Big Beautiful Bill Act* in early July-and doubts regarding the Fed's independence contributed to higher risk premiums at longer maturities. The yield on the 10-year US Treasury declined from 4.6% at the beginning of the year to 4.15% at year-end. Overall, the J.P. Morgan Global Bond US Index recorded a gain of 6.2% in 2025.

Eurozone government bonds delivered more muted performance. The iBoxx Euro Sovereign Index generated a total return of 0.6%. The relative underperformance versus the US initially reflected slightly stronger economic data and renewed hopes for a potential resolution of the conflict in Ukraine. Inflation expectations pointed to easing price pressures, but the European Central Bank refrained from further rate cuts during the year, having most recently lowered the deposit rate to 2% in early June.

The agreement on a tariff compromise with the US reduced uncertainty and removed an obstacle to a potential recovery in the European-particularly German-economy. Substantial fiscal packages were approved in both Europe and Germany, which, if implemented, are expected to support investment. At the same time, rising debt levels are likely to increase government bond supply and push risk premiums higher at longer maturities. The yield on the 10-year German Bund rose by 50 basis points year-on-year to 2.86%.

Performance review for the Fund

The Fund's investment policy remained unchanged in 2025. A conservative and broadly diversified issuer universe continued to provide stable income. The portfolio remained focused on European government and quasi-sovereign bonds, as well as covered bonds with solid credit quality. To enhance yield, exposure to corporate bonds—both financial and non-financial—was maintained, primarily within the good-quality segment. Maturities were concentrated between four and ten years.

Throughout the year, inflows were invested in line with these principles, including participation in attractive new issues. The portfolio remained broadly diversified: around 30% of new investments were allocated to government and quasi-sovereign bonds; just under 50% to covered bonds and financials (with a strong emphasis on covered bonds); and slightly more than 20% to non-financial corporate bonds.

Thanks to this broad diversification and conservative duration positioning in the short-to-medium maturity range, the portfolio was relatively well protected from the general rise in interest rates. The decline in risk premiums on corporate, covered, and quasi-sovereign bonds, combined with steady coupon income, supported overall performance.

Market outlook

The conservative portfolio structure is expected to be maintained. Further deterioration in confidence in the policy environment of the world's largest economy presents risks for US investments but may also create opportunities in Europe or emerging markets. Expectations of a more dynamic increase in US debt are likely to push investors to demand higher risk premiums for longer-dated US Treasuries. This trend may also affect European and German government bonds, especially given rising debt levels in these regions.

NEF Ethical Target 2029 (launched on 31/01/25)

Manager's Report (unaudited)

Market overview

The market environment in 2025 was shaped by a pronounced appetite for risk among investors. Despite an initially volatile macroeconomic backdrop, sentiment in global credit markets improved steadily. This was reflected in a gradual tightening of risk premiums across almost all rating categories. Euro-denominated corporate bonds were particularly notable: while the investment-grade segment benefited from broad market stabilisation, the high-yield segment attracted disproportionately strong demand. The yield curve steepened, and active positioning at the long end enabled the capture of roll-down effects as maturities shortened.

In the second half of the year, the robust condition of global credit markets led to significant appreciation in subordinated bonds, as investors increasingly sought yield opportunities beyond traditional senior debt.

Performance review for the Fund

Since its inception, the Fund has delivered a pleasing gross return. This result reflects the disciplined implementation of the investment strategy, which benefited both from the general market trend and targeted security selection. The positive performance was essentially driven by three factors. First, beta participation and spread tightening in a positive market environment led to declining risk premiums on bonds held in the portfolio, resulting in direct price gains. Second, structural income supported performance. The natural roll-down of the yield curve had a positive impact as bond prices converged towards par over time while benefiting from the lower yields of shorter maturities. Finally, the opportunistic decision to invest in the high-yield segment as well as in subordinated bonds proved to be a significant performance driver, as these securities not only offered higher coupons but also experienced a markedly stronger tightening of risk premiums compared to higher-rated bonds. A significant portion of the Fund's assets has been invested in financial bonds since inception. A superior risk-return profile was identified here. Compared to industrial bonds, financials delivered better performance in 2025 while maintaining more favorable credit ratings. Despite the price gains already achieved, financial bonds continued to offer a moderate yield pick-up relative to the industrial sector. Due to this fundamental strength, an overweight position in this sector was consistently maintained. A key component of the investment activity was active participation in new issues. The primary market was increasingly utilized to efficiently invest inflows. Overall, the Fund successfully participated in over 50 new issues across both investment grade and high-yield segments. This allowed the Fund to systematically capture new issuance premiums, which represent a valuable source of risk-adjusted excess returns. Despite risk premiums having declined significantly compared to historical levels, the outlook for euro-denominated corporate bonds remains stable. In the coming months, a scenario primarily driven by ongoing interest income (carry) is expected. The fundamentals of companies and the banking sector broadly appear very robust. Nevertheless, increasing merger and acquisition activity calls for selective caution, as such transactions could temporarily weaken the credit profiles of individual issuers. An important factor for new bond supply was financing infrastructure for artificial intelligence (AI). Continued high issuance volumes are expected in this area, likely to be met by equally strong institutional demand. This is likely to provide technical support to the market.

Market outlook

The strategy for 2026 remains focused on consistently capturing interest income and the roll-down effect. The intention is to continue using the primary market as a strategic source of excess returns and to maintain our allocation to financial bonds due to their attractive relative valuation. The main emphasis is on preserving credit quality while optimizing the yield structure.

1 - General information

NEF (the “Fund”) is a unit trust, qualifying as a “Fonds Commun de Placement” created on October 8, 1999, under Part I of the Law of December 17, 2010 (the “Law”) relating to Undertaking for Collective Investment in Transferable Securities.

The Fund is, as a consequence of the repealing of the EEC Directive 85/611, qualified as an “Undertaking for Collective Investment in Transferable Securities” under the EC Directive 2009/65 of July 13, 2009 and is subject to the Luxembourg Law of December 17, 2010 relating to Undertakings for Collective Investment.

The Fund is managed by the Management Company, NORD EST ASSET MANAGEMENT S.A., which is registered at the Luxembourg Register of Commerce (*Registre de Commerce et des Sociétés*) under the number B 69705 and is established at 5 Allée Scheffer, Luxembourg L-2520.

NORD EST ASSET MANAGEMENT S.A. has appointed several international Investment Managers to manage the various Sub-Funds.

The Fund has an umbrella structure. As at December 31, 2025, the Sub-Funds listed below were available to the investors:

Sub-Funds	Ccy	Launch date
NEF Ethical Global Equity (ex NEF Global Equity)	EUR	October 8, 1999

NEF Conservative	EUR	October 13, 2023
NEF Ethical Target 2029 (launched on 31/01/25)	EUR	January 31, 2025

The Sub-Fund NEF Target 2025 has merged into NEF Ethical Bond - Euro on June 13, 2025 with a ratio of 0.638426416.

Categories of units :
Category R, Category D and D2 are available for any kind of investors.
Category PIR is available for natural persons acting out of the scope of their entrepreneurial activity.
Category I and ID are available for institutional investors (the “Institutional Investors”).
Category C are available for (i) all legal persons who do not satisfy the definition of Institutional Investors and (ii) all natural persons, subject to fulfilling the minimum initial subscription requirement. For the avoidance of doubt, the minimum initial subscription requirement for Category C units for persons under (i) and (ii) above is EUR 50,000.

The investment policy of the Fund is to invest in a diversified range of transferable securities, conforming to the investment policy of each particular Sub-Fund.

The Fund maintains the books and records of each individual Sub-Fund in its respective currency and prepares combined statements in EUR. The financial statements have been prepared under going concern basis of accounting following generally accepted principle in Luxembourg including the significant accounting policies detailed in the Note 2.

2 - Principal accounting policies

2.1 - Portfolio valuation

The value of any transferable securities and financial derivative instrument which are listed on a Stock Exchange or dealt in on a regulated market is determined according to their last available price.
In the event that any transferable securities held by the Fund at the valuation day are neither quoted on a Stock Exchange nor dealt in on another regulated market, the Central Administration is authorised by the Board of Directors of the Fund to value the transferable security at its last known price which in some cases could be the acquisition price, unless the Valuation Committee of the Fund estimates prudently and in good faith a valuation based on the expected sales price. At the occurrence of exceptional events, the Valuation Committee of the Fund may evaluate the assets as set in the NEF Valuation Policy.

Other notes to the financial statements

2 - Principal accounting policies

2.1 - Portfolio valuation

As at December 31, 2025, the price for the following securities was determined by the Valuation Committee and valued at 0 :

GETSWIFT TECHNOLOGIES LTD
RUSSIAN FEDERAL BOND OFZ 5.7% 17-05-28
RUSSIAN FEDERAL BOND OFZ 6.9% 23-05-29
RUSSIAN FEDERAL BOND OFZ 7.65% 10-04-30
RUSSIAN FOREIGN BOND EUROBOND 5.25% 23-06-47
SALT LAKE POTASH LTD
CHINA ANIMAL HEALTHCARE LTD
CVR WALGREENS BOOTS ALLIANCE

The decision to value these securities at zero was taken in situations where the issuer had been suspended from trading for several years, had entered bankruptcy or voluntary administration, had been delisted, or where no reliable and up-to-date information on the issuer's activity was available, with no evolution of the situation over an extended period.
For Russian sovereign securities, the valuation at zero was determined in March 2022 following the introduction of international sanctions, the low possibility of trading these instruments, and the absence of observable market prices.

Money market instruments and fixed interest securities with a maturity of less than 60 days may be valued on the basis of their discounted cost. This method consists of taking into account a fixed daily discount to reach the redemption price at the maturity date.
Units or shares in underlying open-ended investment Funds shall be valued at their last available net asset value reduced by any applicable charges. Units or shares in underlying closed-ended undertakings for collective investments shall be valued at their last available stock market price.
The Financial Statements are presented on the basis of the NAV dated December 31, 2025.
The securities portfolios are presented as follows:
1) by transferable securities admitted to an official stock exchange listing, dealt in on another regulated market and other transferable securities
2) by stock exchange place
3) by country or by sector

The figures presented in the financial statements tables may in some cases show non-significant differences due to the use of rounding. These differences do not affect in any way the fair view of the financial statements of the Company.

2.2 - Portfolio valuation impact

The Asian securities held by the sub funds with exposure to Asian markets were valued on January 2, 2026, in accordance with the Valuation Policy in place. Although this valuation date differs from the financial year end, the impact arising from the price difference between December 31, 2025 and January 2, 2026 is not material for NEF Ethical Global Equity, NEF Emerging Market Equity and NEF Ethical Global Trends.

By contrast, for NEF Pacific Equity, as the impact is material (1.22%), a technical NAV was calculated specifically for financial reporting purposes. In this case, the Asian securities were valued using prices as of December 31, 2025, consistent with the year-end reporting date.

NAV presented in the Financial Satement

Category of shares	Number of units	Net asset value per unit in EUR
Category R - Capitalisation units	12,609,858.125	15.63
Category I - Capitalisation units	2,688,331.418	22.18

1 EUR	=	19.4439	ZAR								

2.5 - Valuation of options contracts

Options are valued at their last known price on the valuation date or on the closing date.
The market value of options is include in the statement of net assets under the heading “Options purchased /sold at market value”.
The realised profit/(loss) and changes in unrealized result on options are disclosed in the statement of operations and changes in net assets respectively under the headings “Net realised profit/(loss) on options” and “Movement in net unrealised appreciation (depreciation) on options”.
For the details of outstanding option contracts, please refer to section “Schedule of derivative instruments”.

2.6 - Valuation of forward foreign exchange contracts

Outstanding forward foreign exchange contracts are valued at the latest available price as of the closing date by reference to the rate of exchange applicable to the outstanding life of the contract. The unrealised appreciation and depreciation is disclosed in the statement of net assets.
Realised profit/(loss) and change in unrealised appreciation/depreciation resulting therefrom are included in the statement of operations and changes in net assets respectively under “Net realised profit/(loss) on forward foreign exchange contracts” and “Movement in net unrealised appreciation/depreciation on forward foreign exchange contracts”.

For the details of outstanding Forward foreign exchange contracts please refer to section “Schedule of derivative instruments”.

2.7 - Valuation of futures contracts

Open futures contracts are valued at their last known price on the valuation date or on the closing date. The unrealised appreciation or depreciation on futures contracts is recorded in the statement of net assets.
Realised profit/(loss) and change in unrealised appreciation/depreciation resulting there from are included in the statement of operations and changes in net assets respectively under “Net realised profit/(loss) on financial futures” and “Movement in net unrealised appreciation (depreciation) on financial futures”.

For the details of outstanding future contracts, please refer to section “Schedule of derivative instruments”.

Other notes to the financial statements

2 - Principal accounting policies

2.8 – Capital Gain Tax

During the period, the Management Company monitored the potential liability to tax on unrealised capital gains arising from investments in markets where capital gains tax applies. The outcome of this monitoring supported the continued recognition of the provision for unrealised capital gains tax on investments in the Indian market for NEF Emerging Market Equity. The Management Company continues to monitor and review capital gain tax requirements for uncertain positions on any future unrealised gains in the Indian and other markets.

2.9 - Valuation of swaps

Interest Rate Swaps (IRS) are valued on the basis of the difference between the discounted value of all future cash flows paid by the Fund to the counterparty on the valuation date at the “zero coupon swap” rate corresponding to the maturity of those cash flows, and the discounted value of all future cash flows paid by the counterparty to the Fund on the valuation date at the “zero coupon swap” rate corresponding to the maturity of those cash flows. The unrealised appreciation and depreciation is disclosed in the statement of net assets.

For the details of outstanding Swaps contracts, please refer to section “Schedule of derivative instruments”.

2.10 - Dividend and interest income

Dividend income is recorded as of the ex-dividend date and net of withholding tax. Interest income is recorded on an accrual basis and net of withholding tax. Capital gain tax (excluding Indian tax) is recorded in the statement of operations and changes in net assets under the heading “Dividends on securities portfolio, net”.

2.11 - Income generated by securities lending

Securities lending income is recognised on a cash basis and recorded in the statement of operations and changes in net assets under the heading “securities lending income”.

2.12 - Transaction fees

Transaction fees include broker fees, forex fees, stock exchange fees, settlement fees and trading fees linked to transactions on portfolio securities, forward foreign exchange contracts and futures contracts. Furthermore, in accordance with the practices of the bond markets, a bid-offer spread is applied to bond purchase or sale transactions. According to this principle, the selling and buying prices applied by the broker to a given transaction are not identical and the difference between them constitutes the broker's remuneration.

2.13 - Abbreviations used in securities portfolios

U: Zero Coupon Bond
CV: Convertible
A: Annual
S: Semi-annual
Q: Quarterly
M: Monthly

3 - Determination of net asset value

The Net Asset Value per unit of each Category of unit in each Sub-Fund is determined by dividing the value of the total net assets of that Sub-Fund properly allocable to such category by the total number of units of such category outstanding on such valuation day.

Other notes to the financial statements

4 - Management fees

Under the terms of the prospectus of the Fund, the Management Company has appointed investment managers for each Sub-Fund. The investment managers are entitled to an annual fee payable monthly or quarterly by the Management Company, out of the management fee paid monthly to the Management Company by the Sub-Funds and amounting to an annual rate calculated on the Sub-Fund's average Net Asset Value of each month.

The rates applicable as at December 31, 2025 are as follows:

Management fees per annum

Sub-Funds	Category R	Category I	Category D	Category ID	Category D2	Category C	Category PIR

*NEF Target 2025 merged into NEF Ethical Bond Euro on 13 June 2025.
**NEF Ethical Target 2029 was launched on 31 January 2025, with the first computed NAV dated 03 February 2025.

5 - Depositary fees

The depositary fees per annum are paid by the Fund on the basis of business practice in Luxembourg. These fees are calculated and payable on quarterly basis.
The maximum fees are as follows :
Supervisor fees max. 0.02% ,
Safekeeping fees max. 0.005%,
Total max.0.025%.

Other notes to the financial statements

6 - Correspondent bank fees

Correspondent bank fees include fees and expenses charged by correspondent bank in Italy, as agreed with the Management Company.

7 - Subscription tax *("Taxe d'abonnement")*

The Fund is registered in Luxembourg and as a result, is exempt from tax except for the “taxe d'abonnement”. Under current legislation, categories of units reserved to institutional investors are subject to an annual tax rate of 0.01%, those reserved to retail investors are subject to an annual tax rate of 0.05%. The tax is calculated and payable quarterly on the net assets of each Sub-Fund at the end of the relevant quarter.

8 - Securities lending

As at last official NAV dated December 31, 2025, the Fund had entered into fully collateralised securities lending agreements with first-class financial institutions, as follows:

Sub-Funds	Ccy	Market Value (EUR)	% of Investments	Amount Collateral Securities	Collateral Cash
NEF Ethical Global Equity	EUR	8,325,515.94	1.18%	0.00	8,741,791.79

Other notes to the financial statements

10 - Redemptions/switches Fees

Redemptions/switches during the term of the Sub-Funds listed below are subject to a fee - payable to the Fund - as follows:

NEF - Target 2025 (merged on 13/06/25)
1% till the target date of the Sub-Fund.

NEF - Target 2028
1.5% till December 31, 2026, 1% till the December 31, 2027 and 0.5% till December 31, 2028.

NEF - Ethical Target 2029 (launched on 31/01/25)
2% till the 31st December 2026 then of 1.5% till the 31st December 2027, 1% till the 31st December 2028 and 0.5% till 31st December 2029.

11 - Soft Commission

Vontobel Asset Management Inc.,Investment Manager of NEF Emerging Market Equity, until June 12, 2025, utilizes soft dollars for products and services which are research related. The firm uses soft dollars to obtain third party research, proprietary research and/or assistance to its analysts and will enter in a soft dollar arrangement only if the firm receives “research related services” from the broker-dealer providing the research. Vontobel Asset Management, Inc. does not use soft dollars to assist in any way with the management of the firm. The soft dollar commissions for NEF Emerging Market Equity until June 12, 2025 were $ 102,306.34.

12 - Changes in the composition of securities portfolio

The report on the changes in the portfolio statement is available upon simple request at the registered office of the Management Company of the Fund and free of charge.

13 - Subsequent events

The Sub-Funds NEF Ethical Step to Balanced 2030 and NEF Ethical Target 2031 will be launched on 20/03/2026.

Following the outbreak of the conflict between Russia and Ukraine and the resulting international sanctions, the Management Company has closely monitored the potential impacts on the Funds’ activities. As at 31 December 2025, NEF Emerging Market Bond and NEF Global Bond held exposure to Russian sovereign securities. Due to the very low possibility of trading these instruments and given the uncertainty regarding the recoverability of these assets, their valuation has been determined in accordance with the NEF Valuation Policy. NEF Valuation Committee resolved to assign a zero value to the Russian instruments held by the aforementioned sub-funds. The Management Company continues to monitor developments in the geopolitical situation, the sanctions framework, and their potential effects on liquidity and asset valuation.

Remuneration policy

Nord Est Asset Management S.A., the Management Company of the NEF Fund has designed and implemented a remuneration policy (the "Remuneration Policy") in line with the provisions on remuneration as set out by the European Directive 2009/65/EC ("UCITS Directive"), as amended by Directive 2014/91/EU ("UCITS V Directive") as implemented into Luxembourg in the Law of 10 May 2016 (the "2016 Law") and pursuant to article 5 of the EU Regulation n. 2019/2088.

The Remuneration Policy validated by the Board of Directors provides that neither fixed or variable remuneration is connected to quantitative indicators on products performance.

The fixed remuneration is composed by the remuneration defined in the employment contract, ticket restaurant and by an integrative pension plan.

The variable remuneration depends on the achievement of specific professional and technical objectives assigned to employees in a multi-year framework. The variable remuneration payable is capped and it may not exceed 50% of contractual remuneration.

The objectives evaluated for the assignment of the variable remuneration are purely qualitative and are set and evaluated annually.

EMPLOYEE REMUNERATION DISCLOSURE

The staff costs of the Management Company and the number of Identified Staff (as defined in ESMA's Guidelines on Sound Remuneration Policies Under the UCITS Directive dated 14 October 2016) of the Management Company are, as of December 31, 2025, the following:

Nord Est Asset Management S.A.

Headcount (directors, senior management and staff) : 13

The figures have been prepared taking into consideration point 162 of section 14.1 of the ESMA remuneration guidelines relating to the confidentiality and data protection in presenting the remuneration information.

Fixed remuneration:	EUR 1,126,245.20
Variable remuneration:	EUR 170,000.00
Total remuneration :	EUR 1,296,245.20

INVESTMENT MANAGEMENT FUNCTIONS REMUNERATION DISCLOSURE

With regards to the investment management functions delegated from the Management Company according to Article 13 of the UCITS Directive, the figures could not be obtained from the investment managers.

Global Risk Exposure

The commitment approach

The following Sub-Funds use the commitment approach in order to monitor and measure the global exposure:

Sub-Funds
NEF Ethical Global Equity
NEF Ethical Euro Equity
NEF Emerging Market Equity
NEF Ethical Bond - Euro
NEF Emerging Market Bond
NEF Ethical Short Term Bond-Euro
NEF Risparmio Italia
NEF Ethical U.S. Equity
NEF Pacific Equity
NEF Ethical Corporate Bond-Euro
NEF Ethical Balanced Dynamic
NEF Ethical Balanced Conservative
NEF Ethical Global Trends
NEF Target 2028
NEF Conservative
NEF Ethical Target 2029 (launched on 31/01/25)

The absolute VaR approach

The Sub-Fund NEF Global Bond uses the absolute Value at Risk (VaR) approach in order to monitor and measure the global exposure. The limit is set at 20%.

The VaR figures have been calculated based on the following input data :

First semester		**Second semester**	
Model used	Montecarlo VaR	Model used	Historical VaR
Confidence level	99%	Confidence level	99%
Holding period	20 days	Holding period	20 days
Data history	252 days	Data history	252 days
Average	5.74	**Average**	7.57
Min	3.23	**Min**	7.24
Max	10.51	**Max**	7.80

The average sum of notionals of financial derivative instruments used during the financial year was 274.64%.

	Leverage levels
Min	232.56%
Max	363.18%
Average	274.64%

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Global Equity **Legal entity identifier:** 549300OERVUVBWBIJ027

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 93.70% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

On 13 th of June 2025, NEF Ethical Global Equity (the "Sub-Fund") has been converted into a financial product as referred to in Article 8 of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ("**SFDR**").

Since June 2025, The Sub-Fund has promoted environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in stocks issued by companies with

a good ESG profile that had represented the investment universe. It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has promoted environmental and social charachteristic as follows:

The Sub-Fund sought to address key environmental and social issues that were deemed relevant to the issuers' businesses, using ESG scores as a means of transparently and objectively measuring a company's relative ESG performance, commitment and effectiveness, based on verified reported data in the public domain. The ESG scores covered 10 main themes, including emissions, environmental product innovation, resource use, human rights, product responsibility, management and shareholders. Corporate issuers with better ESG scores were perceived to have more sustainable business practices.

- ***How did the sustainability indicators perform?***

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

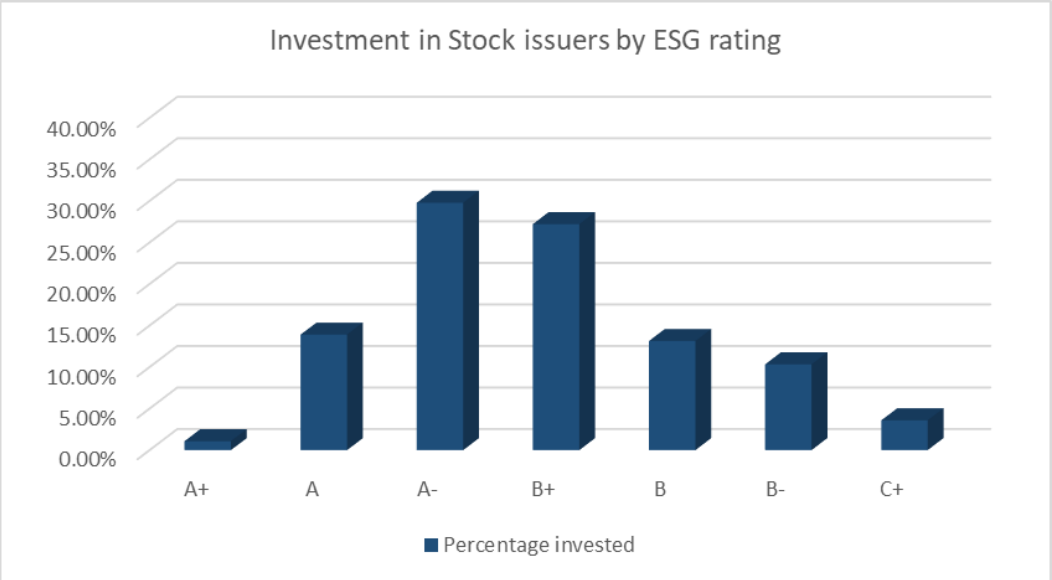
The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics.

All issuer had an ESG rating. The Sub-Fund was invested all over the period in issuers with good ESG rating (i.e. considered by the Management Company if their rating is greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers during the reference period).

Weighted average ESG score of the Sub-Fund was above average ESG benchmark rating at year end.

The weighted average ESG score was 71.61 (B+) on average during the reporting period.

The below graph shows the split of issuers by ESG rating at year end.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

In addition to the rating, the following consideration were taken into account:

a. Equity issuers: the Sub-Fund excluded the following companies from its eligible universe:

- Companies involved in activity related to controversial weapons; This requirement was in place and respected for the full year 2025.
- Companies with important revenues generated from services/products oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025. However, 9 issuers were identified as breaching the 5% threshold right after the onboarding of the new Investment Manager and were promptly excluded. The issue stemmed from differences in the calculation methodologies used by the data providers of the Investment Manager and the Management Company. Following this event, both entities aligned on the same

data provider, enabling more accurate and consistent monitoring. The issuers concerned represented an average weight of 0.42% over the year.

- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full reporting period.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full reporting period.
- Companies whose main business activity is carried out in any of the following business areas: coal and unconventional oil and gas; These requirements were in place and respected for the full reporting period.

b. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:

- They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
- They consider principal adverse impacts of its investment decisions on sustainability factors; and
- Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Global Equity.

The Sub-Fund was not invested in any UCIs/UCITS during 2025.

Additionally, the Sub-Fund had more than 30% lower greenhouse gas emissions intensity relative to the Benchmark, which is the estimated greenhouse gas (Scope 1 and Scope 2) emissions per $1 million of sales revenue across the Sub-Fund's holdings.

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

- ***…and compared to previous periods?***

  Not applicable as this is the first reporting period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

  The Sub-Fund partially invested in sustainable investments according to article2(17) SFDR during the reporting period.

  The minimum proportion of 20% of sustainable investments was respected over the reporting period.

  According to the Management Company the percentage of sustainable investment over the reporting period was 93.70%. Such sustainable investments were

investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives (as more than 20% of its revenues aligned with the EU Taxonomy) is 0.60%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	0.57
climate change adaptation	0.00
the sustainable use and protection of water and marine resources	0.00
the transition to a circular economy	0.03
pollution prevention and control	0.00
the protection and restoration of biodiversity and ecosystems	0.00

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are

instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

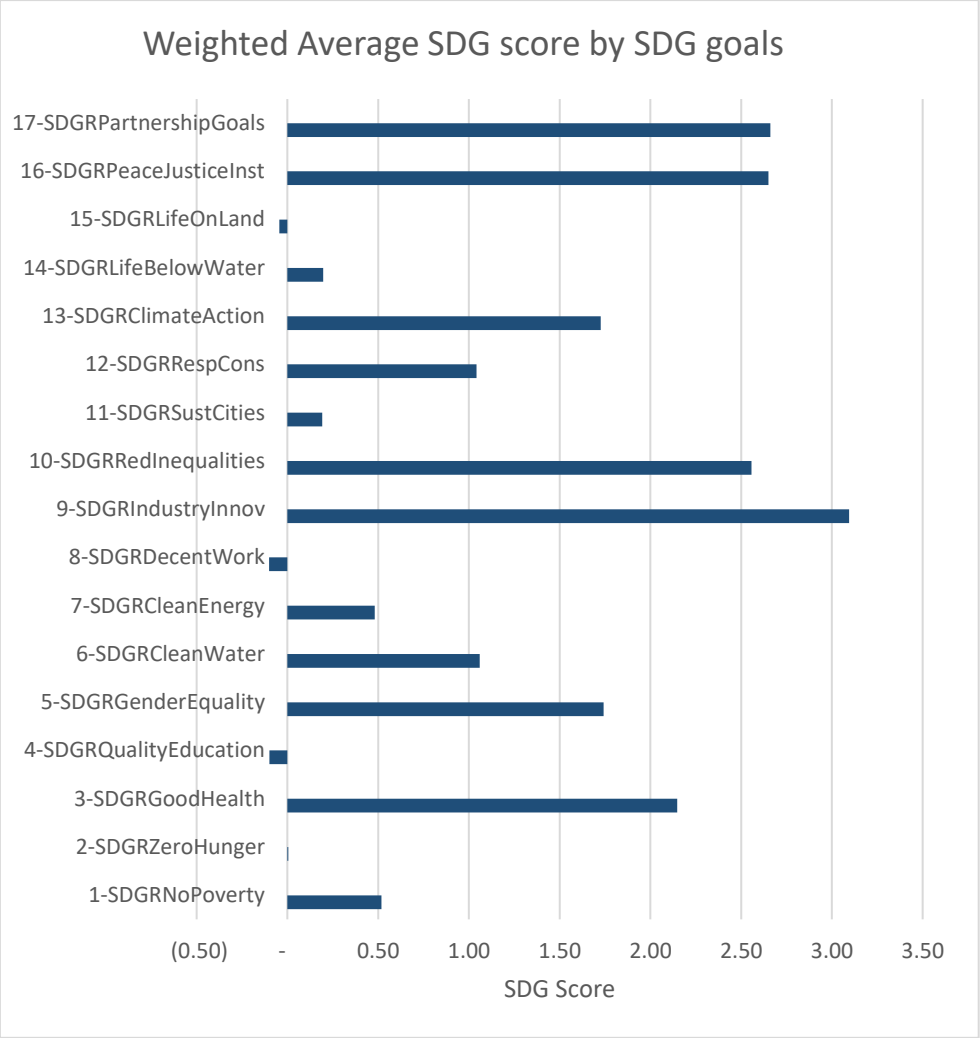
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.
- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available. Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test. Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that all the sustainable invetsments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13 June 2025 to 31 December 2025

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 93.70% in sustainable on average during the reporting period.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

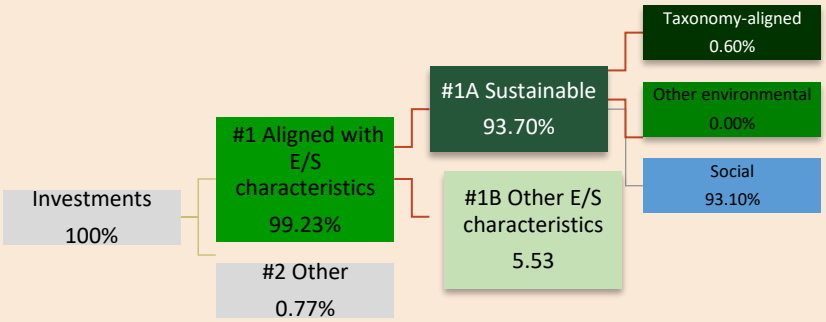
[12] Calculate as average weight over the 4 quarters

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 0.60% during the reporting period.

The calculation of Taxonomy-aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?**

[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective -

☐ Yes:

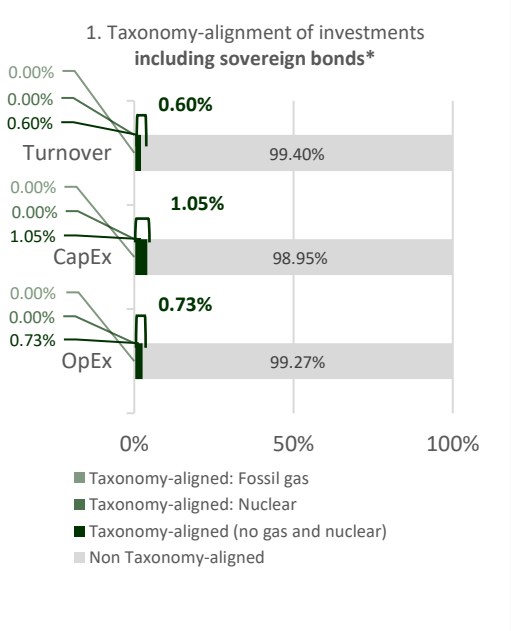
☐ In fossil gas ☐ In nuclear energy

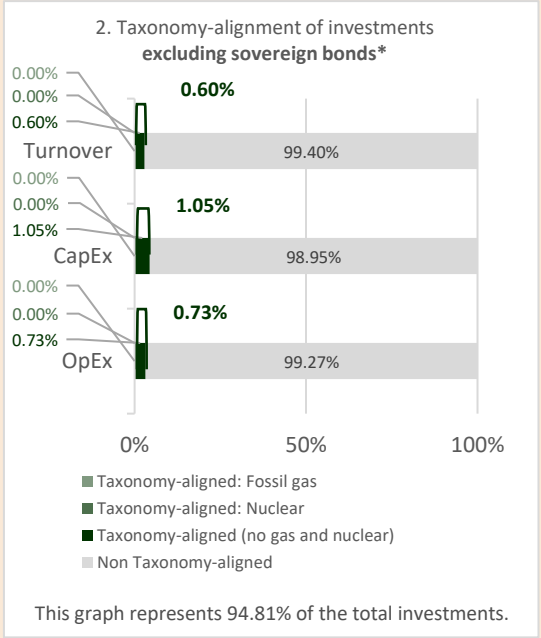
☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[14]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments made in transitional and enabling activities?

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation. The average percentage of share of investment in transitional and enabling activities were 0.00% and 0.47%, respectively.

see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

[14] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Not applicable as this is the first reporting period.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.

The share of sustainable investments with environmental objective not aligned to taxonomy was 0.00% on average during the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 93.10% on overage over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (0.77% in #2 Other at year end). These remaining investments were composed of cash and derivatives for 0.77% of the total net asset. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

On 13th of June 2025, the Sub-Fund has been converted into a financial product as referred to in Article 8 of SFDR. On such date, in line with the other sub-funds of the fund NEF, exclusion criteria were adopted in the NEF Ethical Global Equity and ESG filters were added into its investment strategy.

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

In 2025 the engagement activities related to the Sub-Fund concerned 78 companies and around 18.57% of the total portfolio.

How did this financial product perform compared to the reference benchmark?

This is not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?`***

  This is not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Euro Equity **Legal entity identifier:** 549300C3DJ3WVFQHTG52

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes	No
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 93.79% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

On 13 th of June 2025, NEF Ethical Euro Equity (the "Sub-Fund") has been converted into a financial product as referred to in Article 8 of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ("**SFDR**").

Since June 2025, The Sub-Fund has promoted environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in stocks issued by companies with

a good ESG profile that had represented the investment universe. It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has promoted environmental and social charachteristic as follows:

The Sub-Fund sought to address key environmental and social issues that were deemed relevant to the issuers' businesses, using ESG scores as a means of transparently and objectively measuring a company's relative ESG performance, commitment and effectiveness, based on verified reported data in the public domain. The ESG scores covered 10 main themes, including emissions, environmental product innovation, resource use, human rights, product responsibility, management and shareholders. Corporate issuers with better ESG scores were perceived to have more sustainable business practices.

- ***How did the sustainability indicators perform?***

  The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

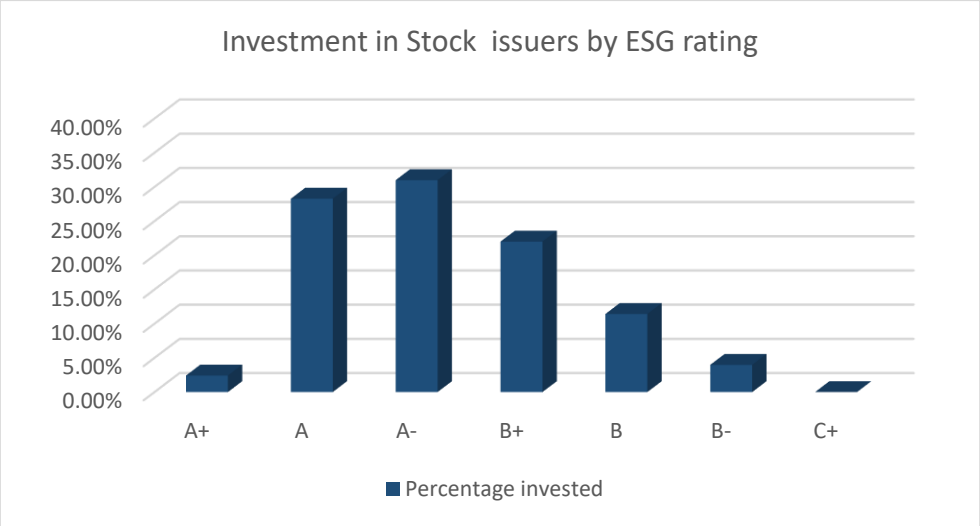
  The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics.

  All issuer had an ESG rating. The Sub-Fund was invested all over the period in issuers with good ESG rating (i.e. considered by the Management Company if their rating is greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers during the reference period).

  Weighted average ESG score of the Sub-Fund was above average ESG benchmark rating at year end.

  The weighted average ESG score was 75.99 (A-) on average during the reporting period.

  The below graph shows the split of issuers by ESG rating at year end.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

In addition to the rating, the following consideration were taken into account:

a. Equity issuers: the Sub-Fund excluded the following companies from its eligible universe:

- Companies involved in activity related to controversial weapons; This requirement was in place and respected for the full year 2025.
- Companies with important revenues generated from services/products oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full reporting period.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development

(OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full reporting period.

- Companies whose main business activity is carried out in any of the following business areas: coal and unconventional oil and gas; These requirements were in place and respected for the full reporting period.

b. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:

- They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
- They consider principal adverse impacts of its investment decisions on sustainability factors; and
- Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Euro Equity.

The Sub-Fund was not invested in any UCIs/UCITS during 2025.

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party

- ***…and compared to previous periods?***

Not applicable as this is the first reporting period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Sub-Fund partially invested in sustainable investments according to article2(17) SFDR during the reporting period.

The minimum proportion of 20% of sustainable investments was respected over the reporting period.

According to the Management Company the percentage of sustainable investment over the reporting period was 93.79%. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives (as more than 20% of its revenues aligned with the EU Taxonomy) is 6.13%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	5.11%
climate change adaptation	0.00%
the sustainable use and protection of water and marine resources	0.00%
the transition to a circular economy	1.02%
pollution prevention and control	0.00%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.

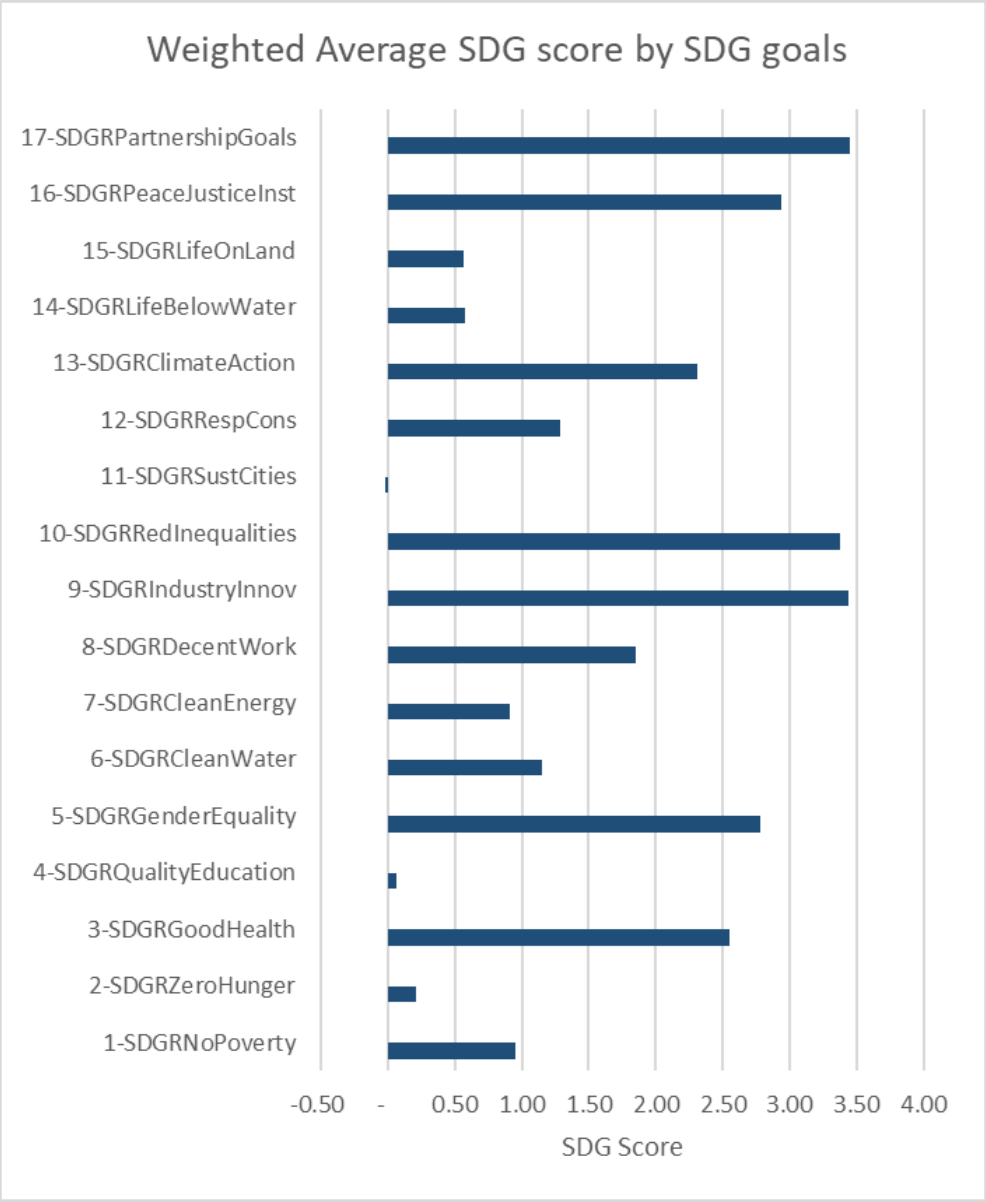
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained
- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.

- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.

- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.

- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available. Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test. Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that all the sustainable invetsments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

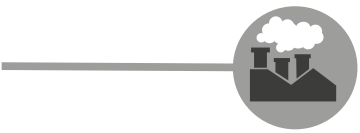
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test.



What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13 June 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country
SAP SE	DE0007164600	Technology	6.61	Germany

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 93.79% in sustainable on average during the reporting period.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is shown as an average percentage during the reporting period.

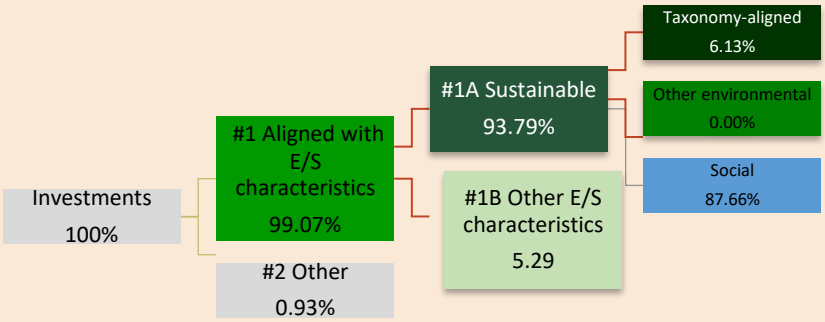
The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic sectors of the investments made were:

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 6.13% during the reporting period.

The calculation of Taxonomy-aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?

☒ Yes:

☒ In fossil gas ☐ In nuclear energy

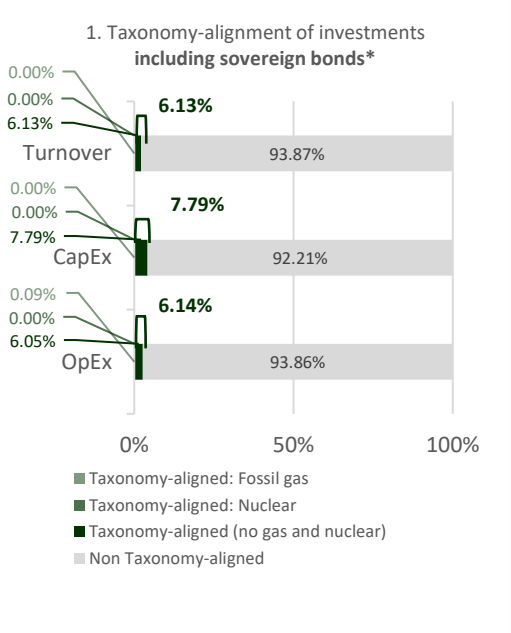
☐ No

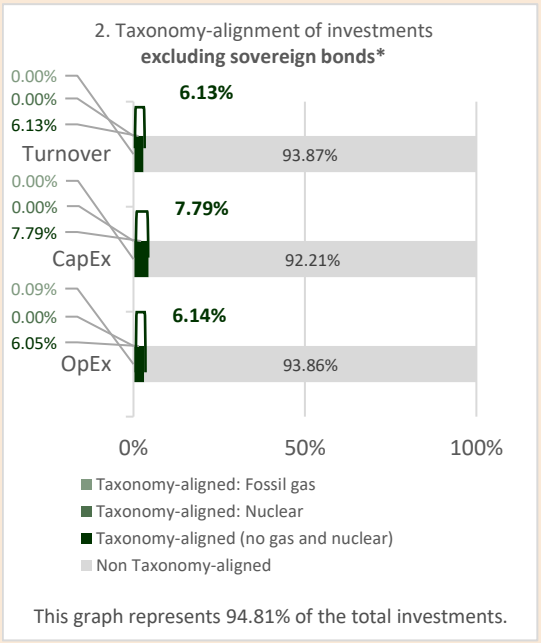
[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[14]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation. The average percentage of share of investment in transitional and enabling activities were 0.02% and 5.35%, respectively.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  Not applicable as this is the first reporting period.

[14] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CApEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.

The share of sustainable investments with environmental objective not aligned to taxonomy was 0.00%% on average during the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 87.66% on overage over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (0.93% in #2 Other at year end). These remaining investments were composed of cash and derivatives for 0.93% of the total net asset. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

On 13th of June 2025, the Sub-Fund has been converted into a financial product as referred to in Article 8 of SFDR. On such date, in line with the other sub-funds of the fund NEF, exclusion criteria were adopted in the NEF Ethical Euro Equity and ESG filters were added into its investment strategy.

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 5 companies and around 11.63% of the total portfolio.

How did this financial product perform compared to the reference benchmark?

This is not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?`***

  This is not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Bond - Euro **Legal entity identifier:** 5493003QOV0XVIV1Q643

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes** ☒ **No**

☐ It made **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40.66% of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made a **sustainable investments with a social objective:** ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the financial year, the NEF Ethical Bond - Euro (the "Sub-Fund") continuously promoted environmental and/or social characteristics by investing mainly in stocks and bonds issued by companies with good quality Environmental, Social and Governance (ESG) profiles. It notably used an ESG rating as further explained in the other sections of this periodic disclosure.

The ESG characteristics taken into account consider:

- the environmental aspect linked to limited carbon intensity.
- the social aspect linked to human rights in general.

The Investment Manager Amundi is committed to phase out thermal coal from its investments by 2030 in OECD countries and in 2040 in non-OECD countries.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.
On June 13th of June 2025, the Sub-Fund NEF Target 2025 has merged into NEF Ethical Bond - Euro.

- ***How did the sustainability indicators perform?***

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics, which were as follows:

a. Sovereign issuers: During the year 2025, the Sub-fund has not invested in government bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:
   - FATF High Risk and monitored jurisdictions
   - EU, UN and OFAC Sanctions
   - Corruption Perception Index (CPI)
   - Know Your Country data (KYC)
     neither in countries that apply the death penalty; in case of a Federation the exclusion was implemented only to the individual Federal State that apply the death penalty.

b. Corporate bond and equity issuers:

- Companies involved in any activities related to controversial weapons; This requirement was in place for the full year 2025. The exclusion was respected.
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full year 2025.
- Companies whose main business activity is carried out in any of the following business areas: Adult entertainment, Gambling, Alcohol, Coal, Exploration and production of unconventional oil & gas extraction (covering "shale oil and gas" and "oil sands"); This requirement was in place and respected for the full year 2025. However, to be highlighted that, as a result of the Management Company screen and research on the subject, one of the issuers invested, representing the 0.05% of the portfolio on average during the reporting period, was analyzed for involvement and therefore sold.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:
    - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
    - They consider principal adverse impacts of its investment decisions on sustainability factors; and
    - Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Bond - Euro.

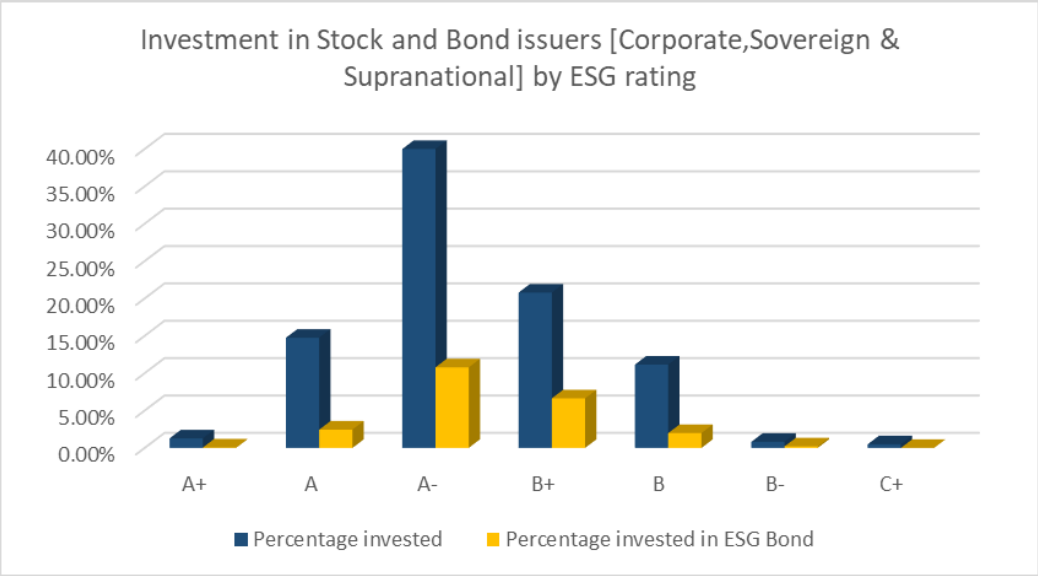
The portfolio was not invested in any UCIs/UCITS during the year.

Additionally, all issuers had an ESG rating. The Sub-Fund was invested all over 2025 in issuers with a ESG rating greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers.

The percentage invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects was 22.58% at year end and 22.39% on average.

Weighted average ESG score of the Sub-Fund according to Refinitiv (or equivalent third-party ESG rating provider), has been above 66.67 (B+) throughout the reporting period. The weighted average ESG score according was 75.42 (A-) on average during the reporting period.

The below graph shows the split of issuers by ESG rating at year end. The yellow bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

… and compared to previous periods?

Compared to the previous reportig period there was a slight upward shift in the average ESG score, from 77.71 in 2024 on average to 75.42 in 2025 on average. This is explained by a higher concentration of A- rated issuers.

The proportion invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects is higher than the previous year, from 19.14% on average in 2024 to 22.39% on average in 2025. Such bonds, being dedicated to finance only sustainable impactful projects, reinforced the Environmental and Social characteristics of the Sub-Fund.

Overall, the percentage of sustainable investments was higher in 2025 compared to 2024: 40.66% versus 29.58% on average. The increase in Sustainable Investments is partially explained by improved data quality and coverage from data providers.

The table below provides the historical evolution of the Sub Fund's main sustainability indicators over recent periods.

Sustainability Indicators	FY 2024	FY 2025
ESG Score	77.71	75.42
% Sustainable Investments	29.58%	40.66%

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-Fund partially invested in sustainable investments according to article 2(17) SFDR during the year.

The Investment Manager confirmed that the minimum proportion of 10% of sustainable investments was respected over the year 2025.

According to the Management Company the percentage of sustainable investment was 40.66% on average during 2025. Such sustainable investments were investments which

contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives is 2.22%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	2.18%
climate change adaptation	0.00%
the sustainable use and protection of water and marine resources	0.01%
the transition to a circular economy	0.03%
pollution prevention and control	0.00%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of

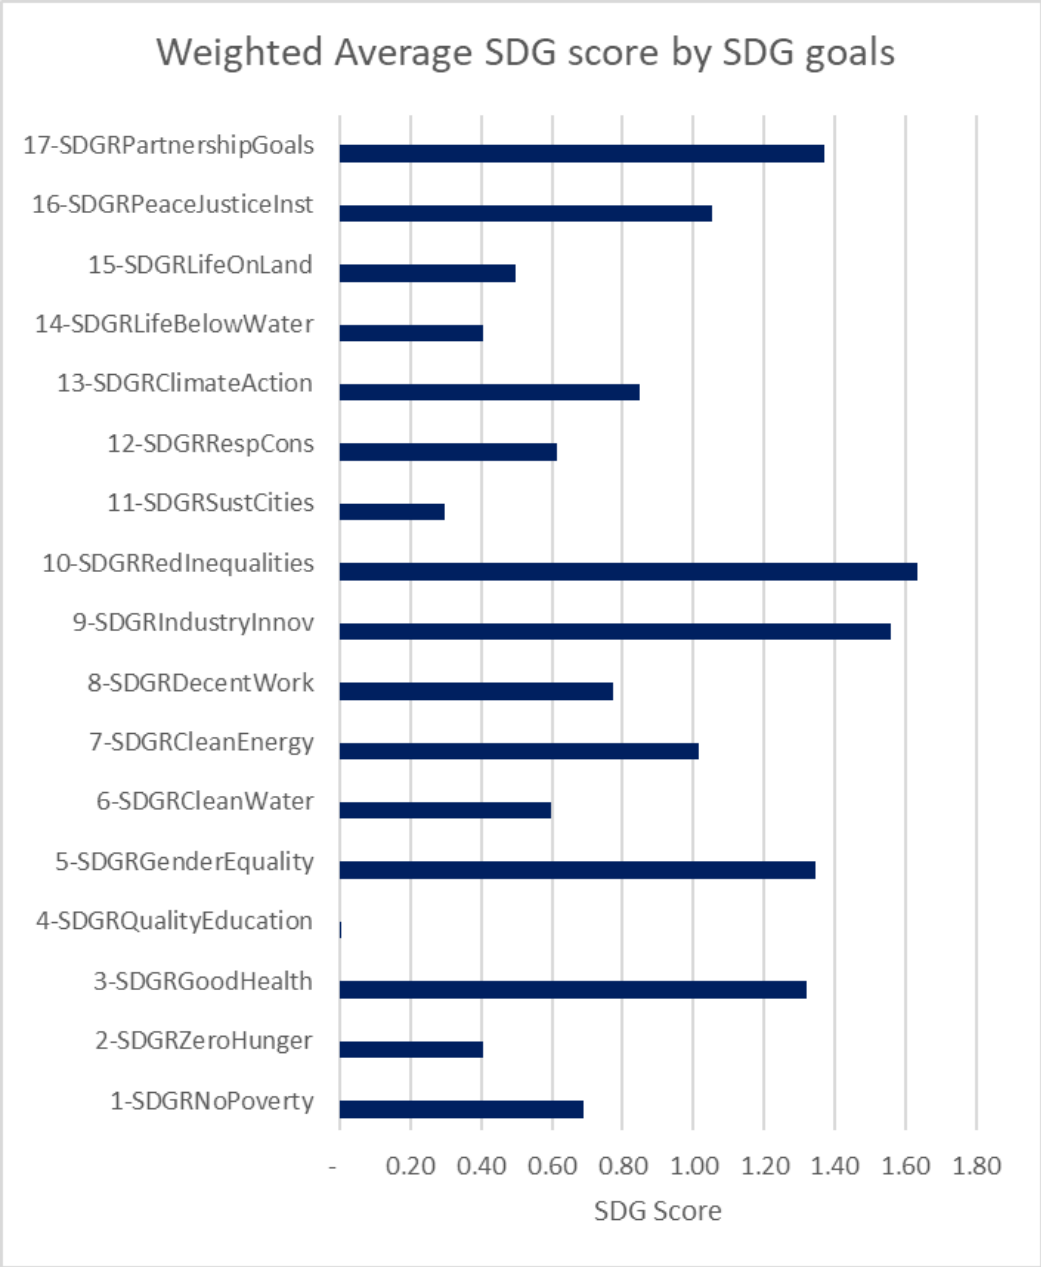
revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective a DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained

- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.
- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available.
  Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test.
  Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test and in the engagement process.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[13]	Isin code	Sector	% Assets	Country
Italy, Republic of (Government)	IT0005647265	Government Activity	3.83	Italy

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 40.66% in sustainable investments on average during the reporting period.

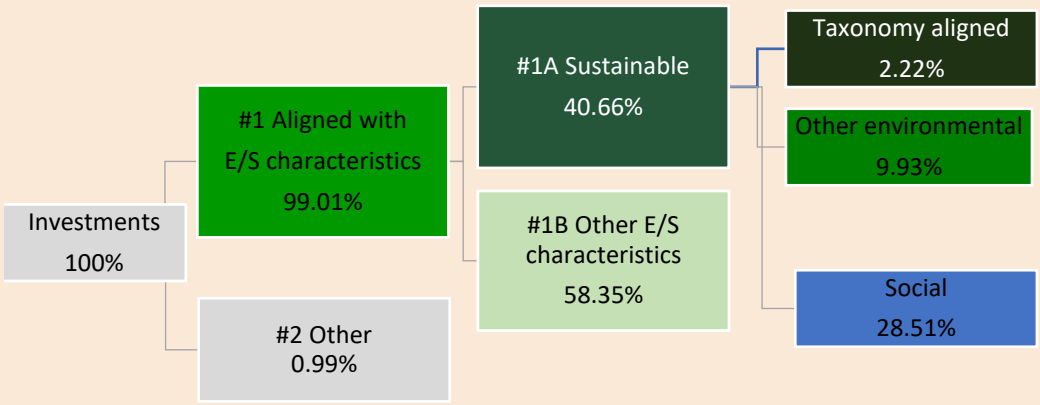
What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.

[13] Calculate as average weight over the 4 financial quarter



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Category	FY 2024	FY 2025
#1 Aligned with E/S characteristics	99.16	99.01
#2 Other	0.84	0.99
#1A Sustainable	29.58	40.66
#1B Other E/S characteristics	69.58	58.35
Taxonomy aligned	0.88	2.22
Other environmental	0.47	9.93
Social	28.23	28.51

- ***In which economic sectors were the investments made?***

Economic sectors of the investments made were:

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 2.22% during the reporting period.

The calculation of Taxonomy aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[14]?**

[X] Yes:

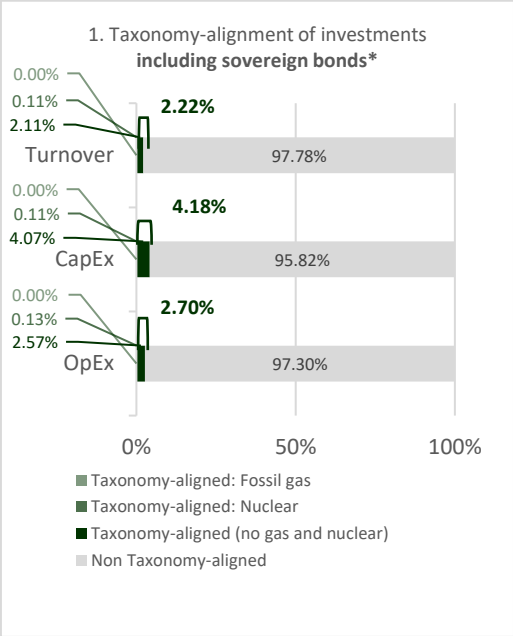
[ ] In fossil gas [X] In nuclear energy

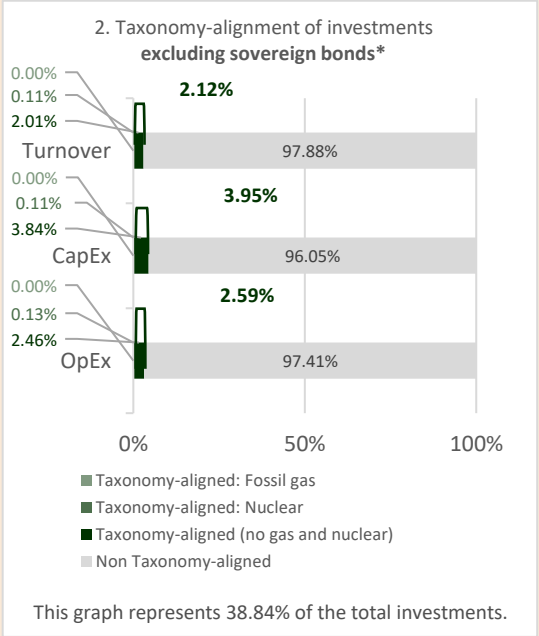
[ ] No

[14] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[13]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments in transitional and enabling activities?***

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.14% and 1.17%, respectively.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2024	FY 2025
% EU Taxonomy-aligned	0.88%	2.22%

[13] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.
The share of sustainable investments with an environmental objective not aligned to taxonomy was at least 9.93% on average over the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 28.51% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (0.99% in #2 Other). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 95 companies and around 45.45% of the total portfolio and revolved around all five macro themes: Transition Towards a Low Carbon Economy, Natural Capital Preservation, Product, Client, Societal

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This is not applicable.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Short Term Bond - Euro **Legal entity identifier:** 5493008S1CPH51DP7054

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

- [ ] **Yes**
- [x] **No**

- [ ] It made **sustainable investments with an environmental objective:** ___%
  - [ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- [x] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.32% of sustainable investments
  - [x] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [x] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - [x] with a social objective
- [ ] It made a **sustainable investments with a social objective:** ___%
- [ ] It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

NEF Ethical Short Term Bond - Euro (the "Sub-Fund") has promoted some environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in stocks and bonds issued by companies with good quality Environmental, Social and Governance (ESG). It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund has invested primarily in assets selected based on sustainability criteria. Sustainability has been understood to mean ecological (Environment - E) and social (Social - S) criteria as well as good corporate and government management (Governance - G). Corresponding criteria included limitation of CO2 emissions and labour relations (Social). When considering environmental and social characteristics, the Sub-Fund has invested in assets of issuers that have applied good corporate governance practices.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

- ***How did the sustainability indicators perform?***

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics, which were as follows:

a. Sovereign issuers: During the year 2025, the Sub-fund has not invested in government bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:
    - FATF High Risk and monitored jurisdictions
    - EU, UN and OFAC Sanctions
    - Corruption Perception Index (CPI)
    - Know Your Country data (KYC)

neither in countries that apply the death penalty; in case of a Federation the exclusion was implemented only to the individual Federal State that apply the death penalty.

b. Corporate bond and equity issuers:

- Companies involved in any activities related to controversial weapons; This requirement was in place for the full year 2025. The exclusion was respected.
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full year 2025.
- Companies whose main business is carried out in controversial sectors such as coal, unconventional oil and gas, adult entertainment and gambling are not investible; This requirement was in place and respected for the full year 2025.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:
    - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
    - They consider principal adverse impacts of its investment decisions on sustainability factors; and
    - Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Short Term Bond - Euro.

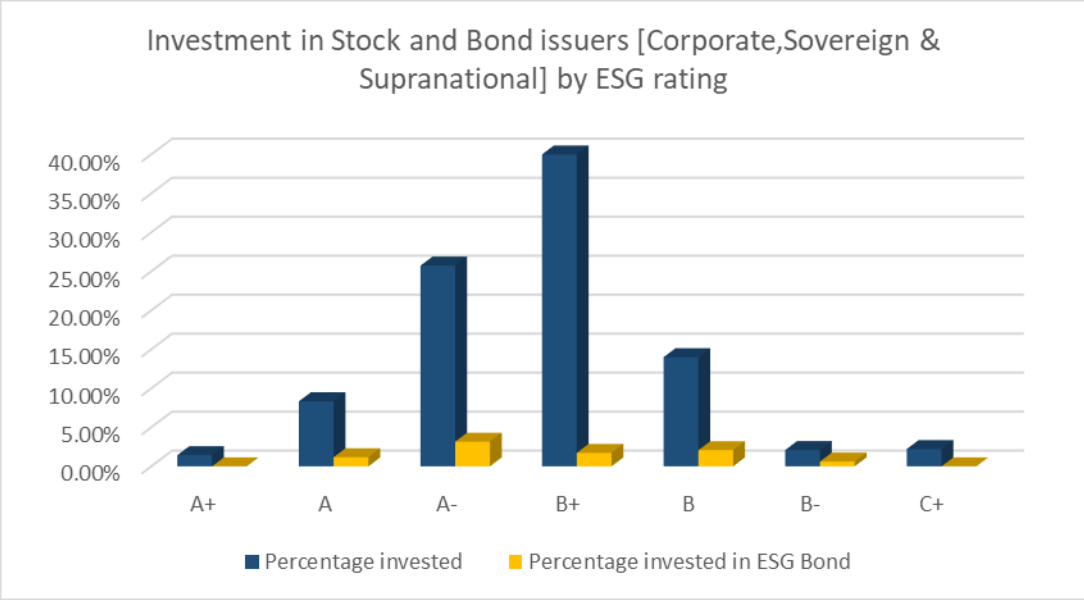
The portfolio was not invested in any UCIs/UCITS during the year.

Additionally, the Sub-Fund was invested in issuers with a ESG rating greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers.

The percentage invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects was 7.84% at year end and 8.75% on average.

Weighted average ESG score of the Sub-Fund according to Refinitiv (or equivalent third-party ESG rating provider), has been above 66.67 (B+) throughout the reporting period. The weighted average ESG score according was 70.74 (B+) on average during the reporting period.

The below graph shows the split of issuers by ESG rating at year end. The yellow bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

… and compared to previous periods?

Compared to the previous reportig period there was a slight upward shift in the average ESG score, from 69.91 in 2024 on average to 70.74 in 2025 on average. This is explained by a higher concentration of A- rated issuers and a lower concentration of B- rated issuers.

The proportion invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects have slightly increased than the previous year, from 7.57% on average in 2024 to 8.75% on average in 2025, while the proportion of such instrument remain very high. Such bonds, being dedicated to finance only sustainable impactful projects, reinforced the Environmental and Social characteristics of the Sub-Fund.

Compared to the previous period the Exclusion criteria were increased, however those in common were respected.

Overall, the percentage of sustainable investments was slightly lower in 2025 compared to 2024: 46.32% versus 47.05% on average.

The table below provides the historical evolution of the Sub-Fund's main sustainability indicators over recent periods.

Sustainability Indicators	FY 2024	FY 2025
ESG Score	69.91	70.74
% Sustainable Investments	47.05%	46.32%

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-Fund partially invested in sustainable investments according to article 2(17) SFDR during the year.

The Investment Manager confirmed that the minimum proportion of 1% of sustainable investments was respected over the year 2025.

According to the Management Company the percentage of sustainable investment was 46.32% on average during 2025. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives is 1.34%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	1.13%
climate change adaptation	0.00%
the sustainable use and protection of water and marine resources	0.02%
the transition to a circular economy	0.18%
pollution prevention and control	0.01%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

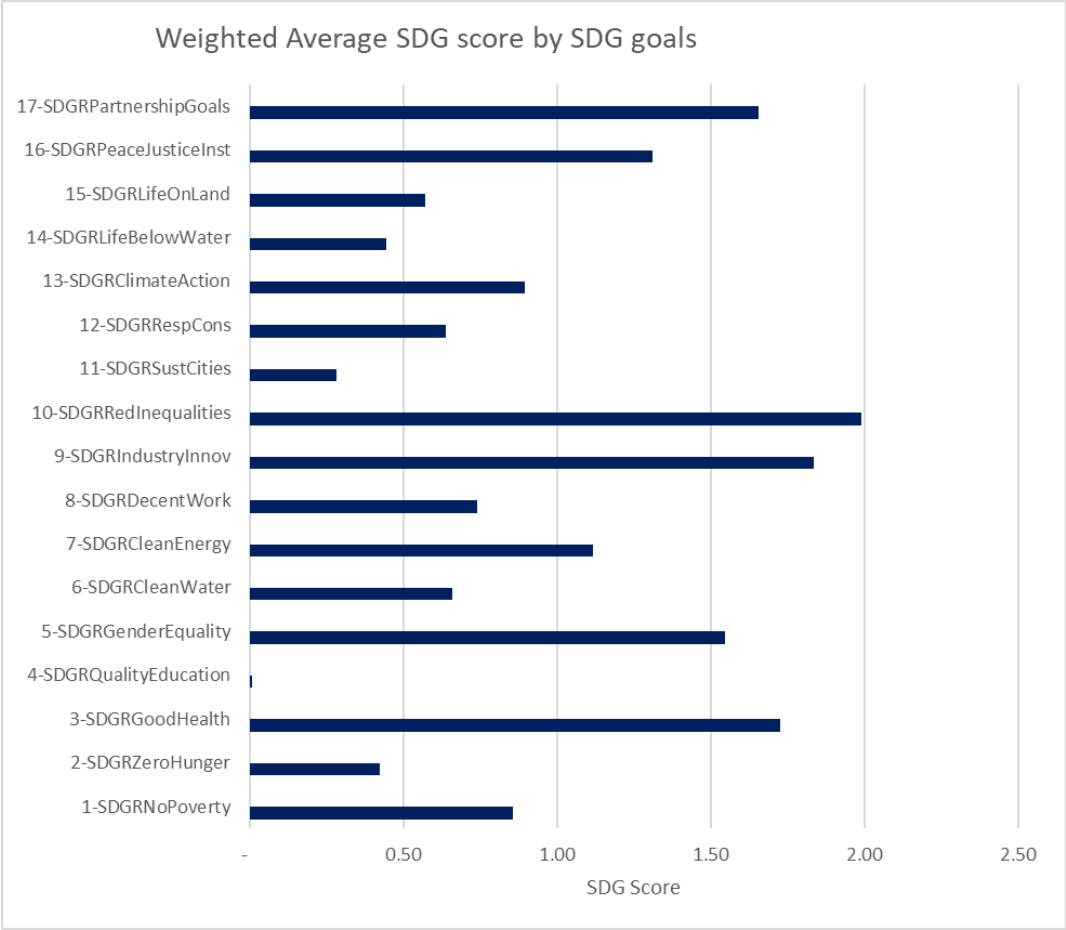
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective a DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained
- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.

- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available.
  Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test.
  Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The principal adverse impact of investments on sustainability factors ("Principal Adverse Impact" or "PAI") was considered by the Investment Manager in the purchasing of securities, money market instruments and investment shares. Indicators used to identify adverse impacts on sustainability factors from investments in companies were derived from the following

categories: greenhouse gas emissions, biodiversity, water, waste and social and labour issues. For investments in securities of countries, indicators in the categories of environmental and social issues were taken into account

In the analysis of countries, PAIs were taken into account by the Investment Manager by excluding those countries that had a comparatively high GHG intensity. In addition, exclusions included unfree states that had a low score on the index issued by the international nongovernmental organization Freedom House.

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test and in the engagement process.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country
Italy, Republic of (Government)	IT0005548315	Government Activity	3.62	Italy
Italy, Republic of (Government)	IT0005495731	Government Activity	3.50	Italy
Italy, Republic of (Government)	IT0005419848	Government Activity	3.43	Italy
Italy, Republic of (Government)	IT0005210650	Government Activity	3.42	Italy

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 46.32% in sustainable investments on average during the reporting period.

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

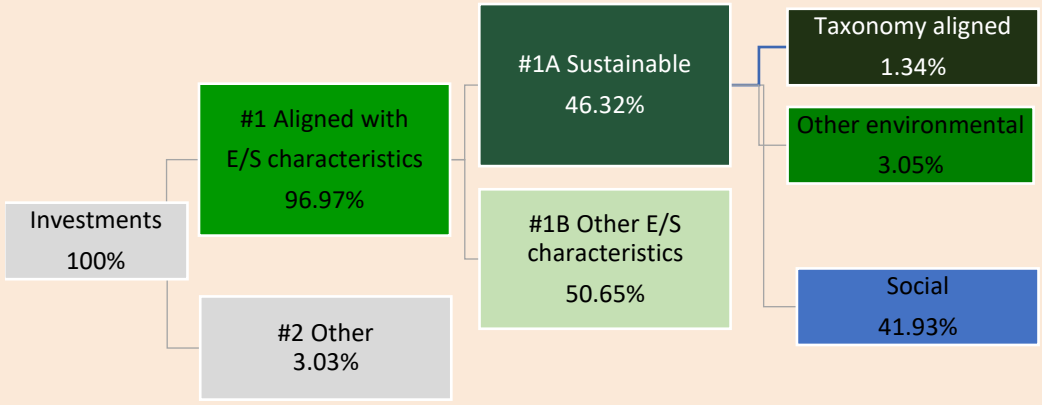
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Category	FY 2024	FY 2025
#1 Aligned with E/S characteristics	96.96	96.97
#2 Other	3.04	3.03
#1A Sustainable	47.05	46.32
#1B Other E/S characteristics	49.92	50.65
Taxonomy aligned	0.58	1.34
Other environmental	0.35	3.05
Social	46.11	41.93

In which economic sectors were the investments made?

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 1.34% during the reporting period.

The calculation of Taxonomy aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[12]?

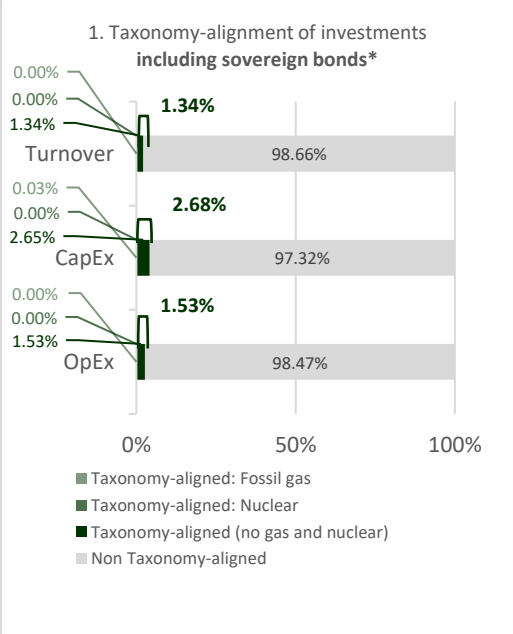
[X] Yes:

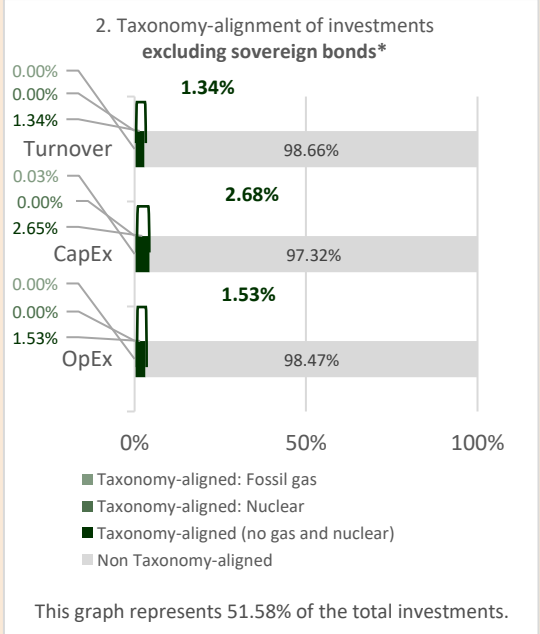
[X] In fossil gas [ ] In nuclear energy

[ ] No

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonom[13]y. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

What was the share of investments in transitional and enabling activities?

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.02% and 0.6%, respectively.

[12] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

[13] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

How did the percentage of investments that were aligned with the EU Taxonomy compared with previous reference periods?

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2024	FY 2025
% EU Taxonomy-aligned	0.58%	1.34%

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.
The share of sustainable investments with an environmental objective not aligned to taxonomy was at least 3.05% on average over the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 41.93% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (3.03% in #2 Other). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 96 companies and around 13.70% of the total portfolio.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This is not applicable.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?***

  This is not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Risparmio Italia **Legal entity identifier:** 549300L84A3L15XHYB72

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met

The Sub-Fund has promoted environmental, social and governance ("ESG") characteristics through the pursuit of an overall ESG score at portfolio level ("Fund's ESG Score") that is higher than the overall ESG score of a basket of indices composed as follows: 30% ICE BofA 1-3 years Euro Govt, 40% ICE Euro Investment Grade and High Yield Italian Corporate Issuers Custom Index, 20% FTSE Italia Mid Cap and 10% FTSEMIB ("Reference ESG Score")

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

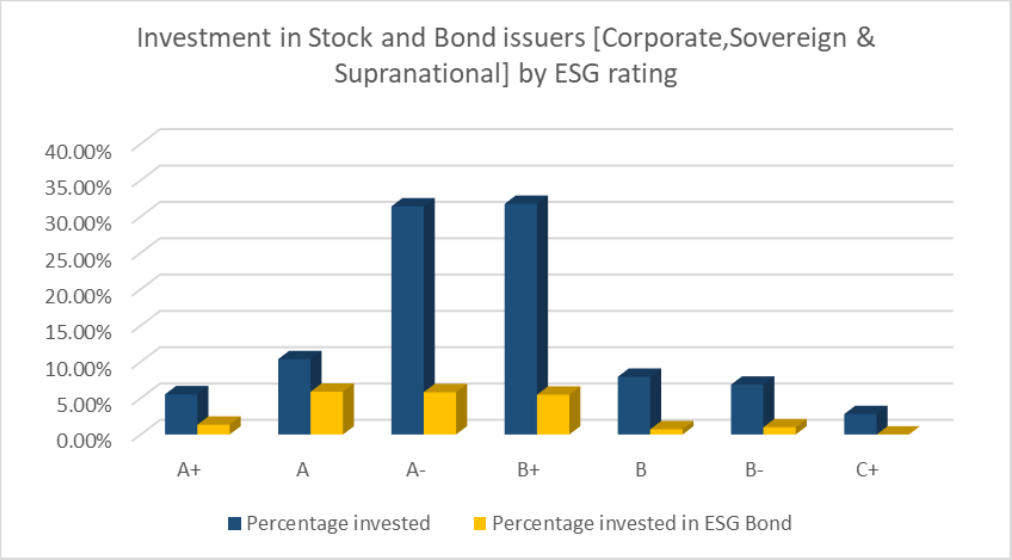
The methodology applies a variety of ESG Criteria (the "ESG filters") to assess the attainment of the promoted environmental and social characteristics.

All issuers had an ESG. The Sub-Fund was invested all over the 2025 in issuers with ESG rating greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers.

The percentage invested in green bonds,Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable /ESG/SDGs project was 19.72% at year end and 20.25% on average.

The weighted average ESG score was was 71.68 (B+) on average during the reporting period. Weighted average ESG score of the Sub-Fund was above average ESG benchmark rating at year end.

The below graph shows the split of issuers by average ESG rating. The yellow bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

In addition to the rating, the follows should has beeen taken into account:

a. Sovereign issuers: During the reporting period, the Sub-fund has not invested in governement bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:

- FATF High Risk and monitored jurisdictions
- EU, UN and OFAC Sanctions
- Corruption Perception Index (CPI)
- Know Your Country data (KYC)

neither in countries that apply the death penalty; in case of a Federation the exclusion was implemented only to the individual Federal State.

b. Corporate bond and equity issuers: The Sub-Fund excluded the following companies from its eligible universe:

- Companies involved in any activities related to controversial weapons. This requirement was in place and respected for the full year 2025;
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare. This requirement was in place and respected for the full year 2025;
- Companies involved in the cultivation and production of tobacco. This requirement was in place and respected for the full year 2025;
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises. This requirement was in place and respected for the full year 2025;

- Companies belonging to coal sector. This requirement was in place and respected for the full year 2025.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:

    - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
    - They consider principal adverse impacts of its investment decisions on sustainability factors; and
    - Their minimum percentage of sustainable investments is equal or higher than NEF Risparmio Italia.

The portfolio was partially invested in UCIs/UCITS during the year. On average over the observation period, approximately 0.30% of the portfolio was invested in a UCI fund.

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

…and compared to previous periods?

Compared to the previous reportig period there was a slight upward shift in the average ESG score, from 70.72 in 2024 on average to 71.68 in 2025 on average. This is explained by a higher concentration of A- rated issuers.

The proportion invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects is slightly lower than the previous year, from 22.57% on average in 2024 to 20.25% on average in 2025, but the proportion of such instrument remain very high. Such bonds, being dedicated to finance only sustainable impactful projects, reinforced the Environmental and Social characteristics of the Sub-Fund.

Compared to the previous period the Exclusion criteria were increased, however those in common were respected.

Overall, the percentage of sustainable investments was slightly lower in 2025 compared to 2024: 70.79% versus 73.60% on average.

The table below provides the historical evolution of the Sub-Fund's main sustainability indicators over recent periods.

Sustainability Indicators	FY 2024	FY 2025
ESG Score	70.72	71.68
% Sustainable Investments	73.60%	70.79%

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-Fund was partially invested in sustainable investments according to article 2(17) SFDR during the reporting period.

The minimum proportion of 10% of sustainable investments was respected over the reporting period.

According to the Management Company the percentage of sustainable investment at year end was 70.79%. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives (has more than 20% of its revenues aligned with the EU Taxonomy) is 8.07%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the invesment that are directed at funding, or are associated with taxonomy-aligned economic activities , which are :

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	7.75%

climate change adaptation	0.00%
the sustainable use and protection of water and marine resources	0.31%
the transition to a circular economy	0.01%
pollution prevention and control	0.00%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

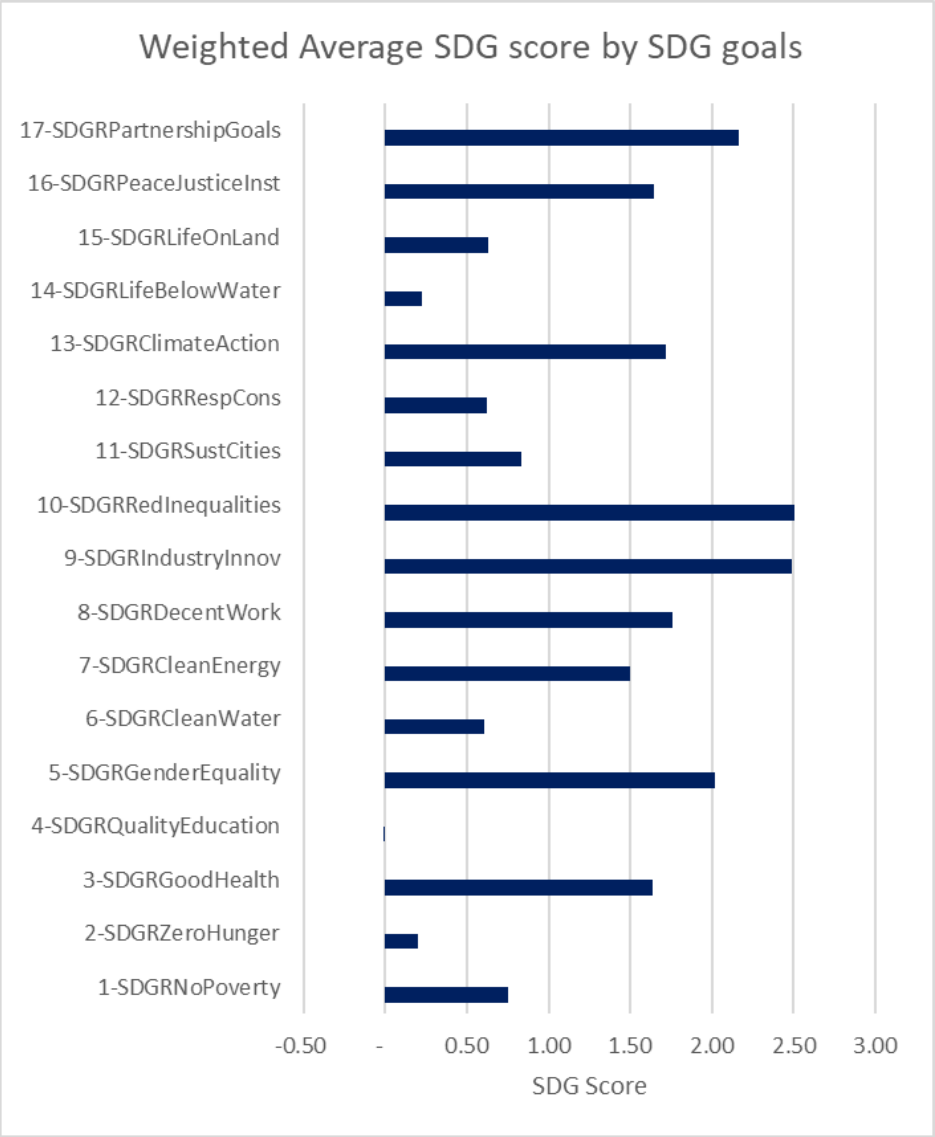
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained

- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.

- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.

- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.

- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available. Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test. Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considers all the mandatory Principal Adverse Impacts to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of the investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Asset	Country

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 70.79% in sustainable investments on average during the reporting period.

[12] Calculate as average weight over the 4 financial quarters

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

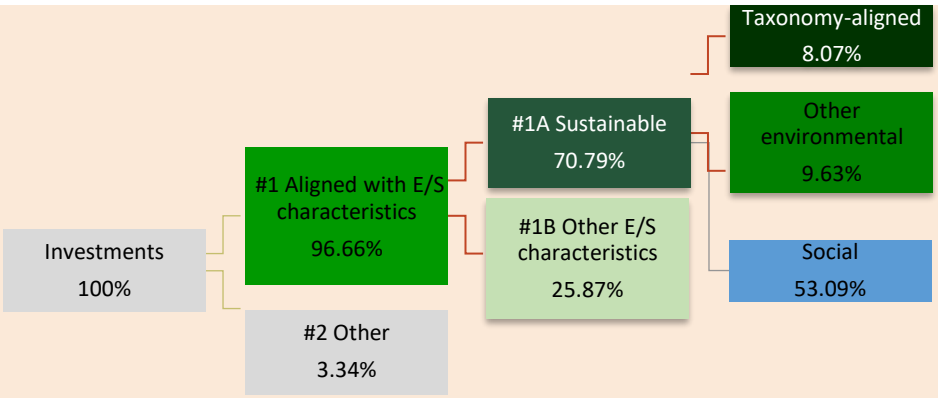
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Category	FY 2024	FY 2025
#1 Aligned with E/S characteristics	94.29	96.66
#2 Other	5.71	3.34
#1A Sustainable	73.6	70.79
#1B Other E/S characteristics	20.7	25.87
Taxonomy aligned	7.83	8.07
Other environmental	5.44	9.63
Social	60.33	53.09

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. Their percentage aligned was on average 8.07% during the reporting period.

The calculation of Taxonomy-aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

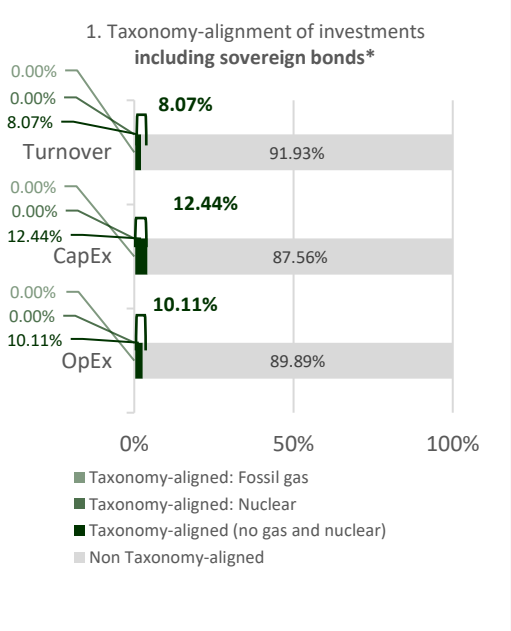
Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?

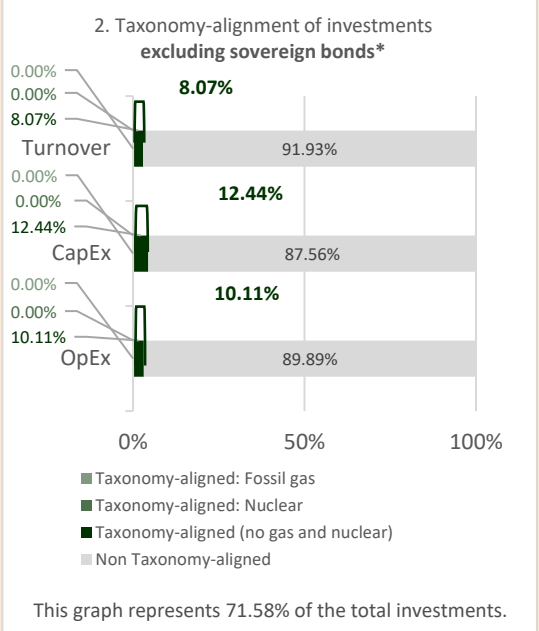
Yes:

In fossil gas In nuclear energy

X No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[14]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

[14] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

What was the share of investments made in transitional and enabling activities?

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.01% and 4.88%, respectively.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2024	FY 2025
% EU Taxonomy-aligned	7.83%	8.07%

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.

The share of sustainable investments with environmental objective not aligned to taxonomy was at least 9.63% on average during the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 53.09% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (3.34% in #2 Other at year end). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for

liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on these investments.

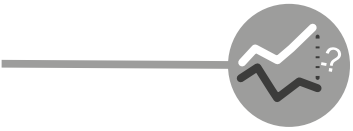
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 57 companies and around 64.04% of the total portfolio, and revolved around all five macro themes: Transition Towards a Low Carbon Economy, Natural Capital Preservation, Product Client Societal Responsibility, Social Cohesion and Strong Governance for Sustainable Development.



How did this financial product perform compared to the reference benchmark?

This is not applicable.

- ***How does the reference benchmark differ from a broad market index?***

  This is Not Applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is Not Applicable

- ***How did this financial product perform compared with the reference benchmark?***

  This is Not Applicable

- ***How did this financial product perform compared with the broad market index?***

  This is Not Applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical U.S. Equity **Legal entity identifier:** 549300U5VM16GX2GIH83

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 94.27% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

On 13 th of June 2025, NEF Ethical US Equity (the "Sub-Fund") has been converted into a financial product as referred to in Article 8 of Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector ("**SFDR**").

Since June 2025, The Sub-Fund has promoted environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in stocks issued by companies with

a good ESG profile that had represented the investment universe. It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has promoted environmental and social charachteristic as follows:

The Sub-Fund sought to address key environmental and social issues that were deemed relevant to the issuers' businesses, using ESG scores as a means of transparently and objectively measuring a company's relative ESG performance, commitment and effectiveness, based on verified reported data in the public domain. The ESG scores covered 10 main themes, including emissions, environmental product innovation, resource use, human rights, product responsibility, management and shareholders. Corporate issuers with better ESG scores were perceived to have more sustainable business practices.

- ***How did the sustainability indicators perform?***

  The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

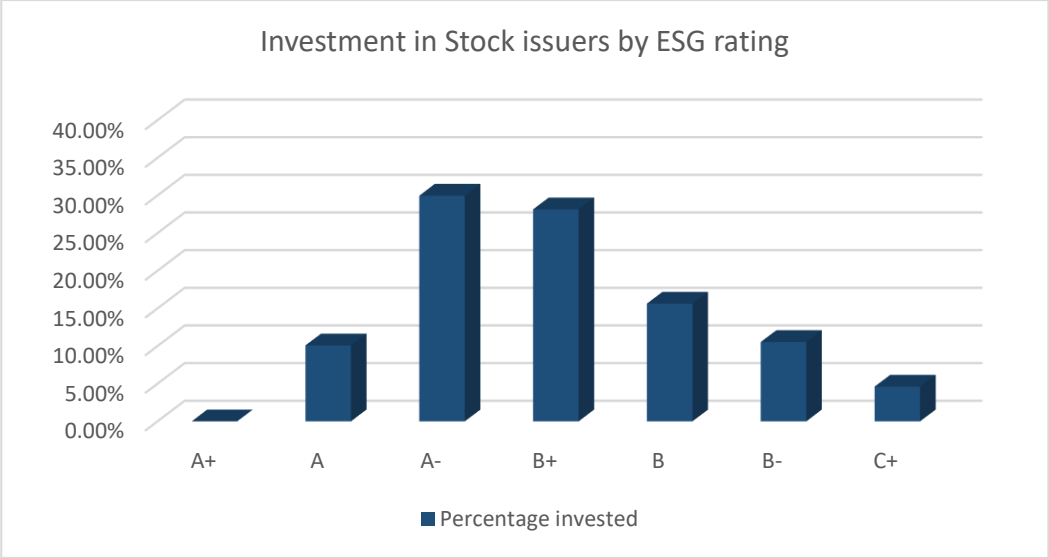
  The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics.

  All issuer had an ESG rating. The Sub-Fund was invested all over the period in issuers with good ESG rating (i.e. considered by the Management Company if their rating is greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers during the reference period).

  Weighted average ESG score of the Sub-Fund was above average ESG benchmark rating.

  The Sub-Fund weighted average ESG score was 70.18 (B+) on average during the reporting period.

  The below graph shows the split of issuers by ESG rating at year end.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

In addition to the rating, the following consideration were taken into account:

a. Equity issuers: the Sub-Fund excluded the following companies from its eligible universe:

- Companies involved in activity related to controversial weapons; This requirement was in place and respected for the full year 2025.
- Companies with important revenues generated from services/products oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025. However, 7 issuers were identified as breaching the 5% threshold right after the onboarding of the new Investment Manager and were promptly excluded. The issue stemmed from differences in the calculation methodologies used by the data providers of the Investment Manager and the Management Company. Following this event, both entities aligned on the same

data provider, enabling more accurate and consistent monitoring. The issuers concerned represented an average weight of a total of 1.04% over the year.

- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full reporting period.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full reporting period.
- Companies whose main business activity is carried out in any of the following business areas: coal and unconventional oil and gas; These requirements were in place and respected for the full reporting period.

b. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:

- They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
- They consider principal adverse impacts of its investment decisions on sustainability factors; and
- Their minimum percentage of sustainable investments is equal or higher than NEF Ethical U.S. Equity.

The Sub-Fund was not invested in any UCIs/UCITS during 2025.

Additionally, the Sub-Fund had more than 30% lower greenhouse gas emissions intensity relative to the Benchmark, which is the estimated greenhouse gas (Scope 1 and Scope 2) emissions per $1 million of sales revenue across the Sub-Fund's holdings.

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party

- ***…and compared to previous periods?***

  Not applicable as this is the first reporting period.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

  The Sub-Fund partially invested in sustainable investments according to article2(17) SFDR during the reporting period.

  The minimum proportion of 20% of sustainable investments was respected over the reporting period.

  According to the Management Company the percentage of sustainable investment over the reporting period was 94.27%. Such sustainable investments were

investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives (as more than 20% of its revenues aligned with the EU Taxonomy) is 0.00%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of

revenues contributing or obstructing with the goal, +10 imply a 100% contribution.

- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

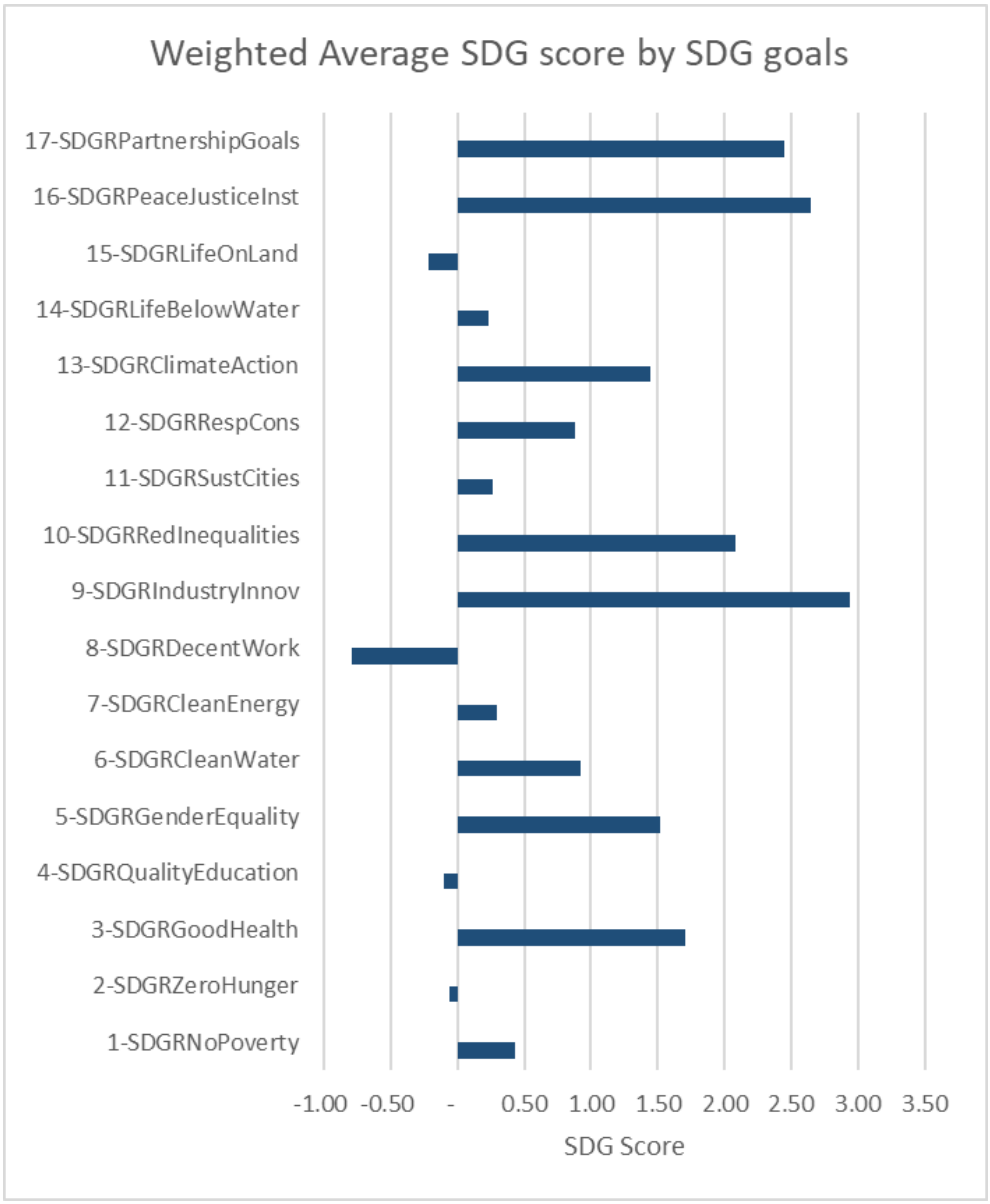
At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and

- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained
- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.

- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.

- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.

- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available. Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test. Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that all the sustainable invetsments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

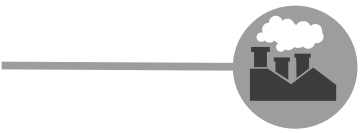
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test.



What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 13 June 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 94.27% in sustainable on average during the reporting period.

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The assets of the fund are divided into various categories in the chart below.

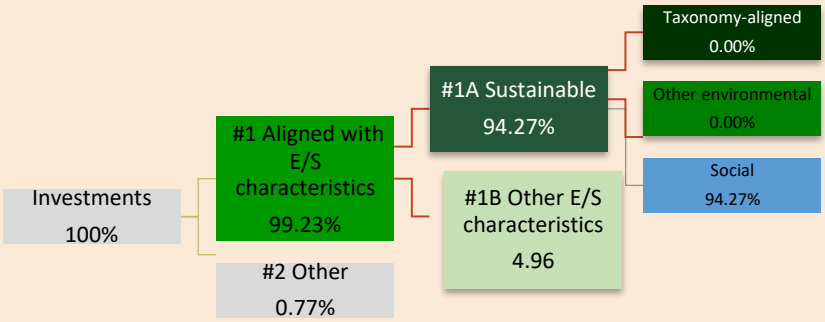
The respective share of fund assets is shown as an average percentage during the reporting period.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic sectors of the investments made were:

Sector	Sub Sector	% Assets
Basic Materials	*Chemicals*	0.48%
	Containers & Packaging	0.07%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 0.00% during the reporting period.

The calculation of Taxonomy-aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

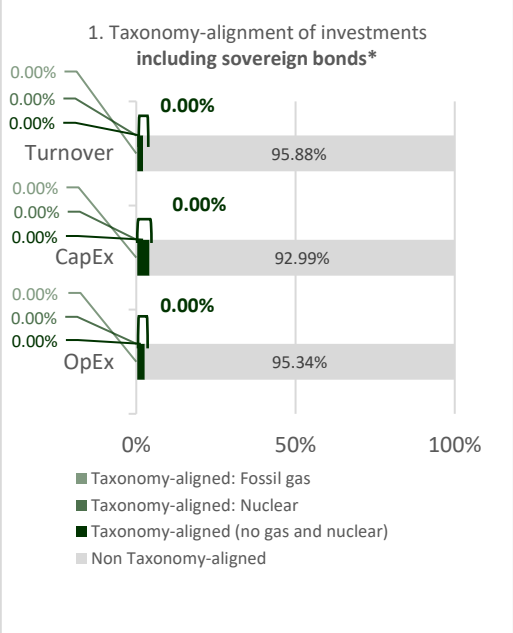
☒ No

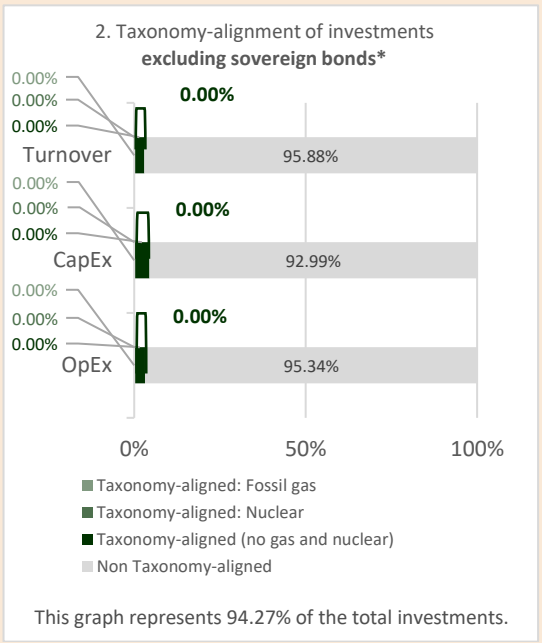
[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[14]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments made in transitional and enabling activities?***

  An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation. The average percentage of share of investment in transitional and enabling activities were 0.00% and 0.00%, respectively.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  Not applicable as this is the first reporting period.

[14] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CApEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.

The share of sustainable investments with environmental objective not aligned to taxonomy was 0.00% on average during the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 94.27% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (0.77% in #2 Other at year end). These remaining investments were composed of cash and derivatives for 0.77% of the total net asset . The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

On 13th of June 2025, the Sub-Fund has been converted into a financial product as referred to in Article 8 of SFDR. On such date, in line with the other sub-funds of the fund NEF, exclusion criteria were adopted in the NEF Ethical US Equity and ESG filters were added into its investment strategy.

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

In 2025 the engagement activities related to the Sub-Fund concerned 49 companies and around 21.78% of the total portfolio.

How did this financial product perform compared to the reference benchmark?

This is not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?`***

  This is not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Corporate Bond - Euro **Legal entity identifier:** 5493006FF9WQPFQWK638

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It made **sustainable investments with an environmental objective:** ___%	☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 83.56% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective:** ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

NEF Ethical Corporate Bond - Euro (the "Sub-Fund") has promoted environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in global bonds with a good ESG profile that had represented the investment universe. It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has promoted environmental and social charachteristic as follows:

- Avoiding exposure to companies in violation of the UNGC and/ or OECD Guidelines.
- Avoiding exposure to companies involved in controversial business activities as mining, transport or distribution of thermal coal, the production or retail of tobacco, and the production or sale of controversial weapons.
- supporting energy transition with an energy mix favouring renewables and avoiding emitters which are highly exposed to especially polluting energy sources such as coal, tar sands and shale gas/oil.

- ***How did the sustainability indicators perform?***

  The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

  The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics.

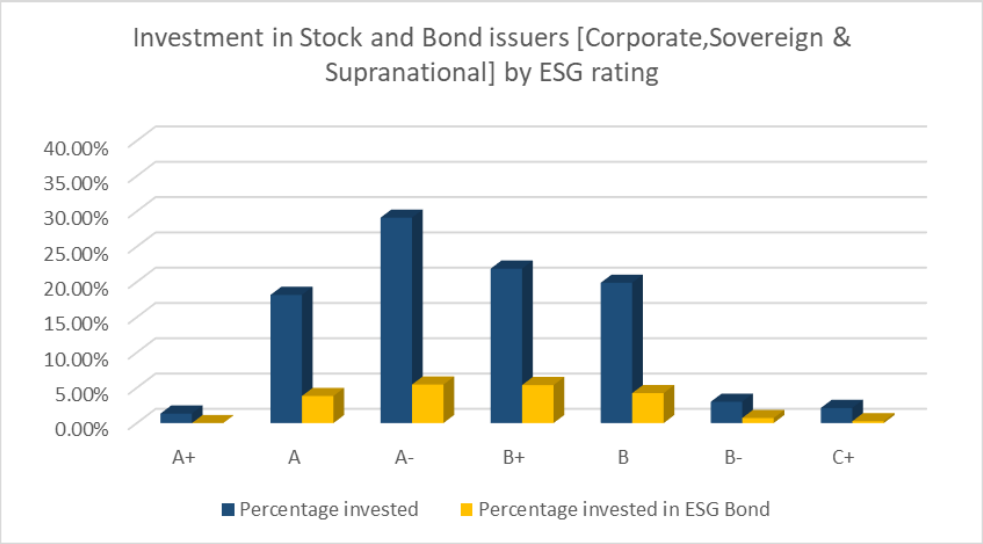
  All issuer had an ESG rating. The Sub-Fund was invested all over the period in issuers with good ESG rating (i.e. considered by the Management Company if their rating is greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers, or ESG8 as defined by Candriam* in house research during the reference period).

  The percentage invested in green bonds,Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable /ESG/SDGs project was 23.23% at year end 19.89% on average during the reporting period.

  Weighted average ESG score of the Sub-Fund was above average ESG benchmark rating at year end.

  The weighted average ESG score was 71.01 (B+) on average during the reporting period.

  The below graph shows the split of issuers by ESG rating at year end. The green bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

In addition to the rating, the following consideration were taken into account:

a. Sovereign issuers: During the reporting period, in governement bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:

- FATF High Risk and monitored jurisdictions
- EU, UN and OFAC Sanctions
- Corruption Perception Index (CPI)
- Know Your Country data (KYC)

neither in countries that apply the death penalty, in case of a Federation the exclusion was implemented only to the individual Federal State.

b. Corporate bond issuers: the Sub-Fund excluded the following companies from its eligible universe:

- Companies involved in activity related to controversial weapons; This requirement was in place and respected for the full year 2025.
- Companies with important revenues generated from services/products oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full reporting period.
- Companies whose main business activity is carried out in any of the following business areas: Adult entertainment; These requirements were in place and respected for the full reporting period.
- Companies particularly exposed to the exploration, mining, transport or distribution of thermal coal; These requirements were in place and respected for the full reporting period.
- Electricity-producing companies which have new coal or nuclear projects, or which have a carbon intensity above a certain threshold; This requirement was in place and respected for the full reporting period.
- Companies significantly exposed to non- conventional oil and gas, nor in issuers exposed to conventional oil and gas for which a significant portion of revenues does not originate from natural gas and renewable energies; These requirements were in place and respected for the full reporting period.
- Companies significantly exposed to gambling activities, directly or indirectly; These requirements were in place and respected for the full reporting period.
- Companies significantly exposed to nuclear energy. This requirement was in place and respected for the full reporting period.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:
   - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
   - They consider principal adverse impacts of its investment decisions on sustainability factors; and
   - Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Corporate Bond.

   The Sub-Fund was not invested in any UCIs/UCITS during 2025.

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party

- ***…and compared to previous periods?***

Compared to the previous reporting period, a slight shift downward of the average ESG rating from 72.10 in 2024 on average to 71.01 in 2025 is noted. This is explained by an increase of A- and B rated issuers and a decrease in the A and A+ rated issuers. Moreover, as for the previous year, all the securities in portfolio have an ESG score.

The proportion invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects have slightly decreased from 20.28% on average in 2024 to 19.89% on average in 2025, but the proportion of such instrument remain very high. Such bonds, being dedicated to finance only sustainable impactful projects, reinforced the Environmental and Social characteristics of the Sub-Fund.

The percentage of Sustainable investment is higher than previous reporting period. 83.56% on average in 2025 while 79.95% on average in 2024. The large increase in Sustainable Investments is partially explained by improved data quality and coverage from data providers.

The table below provides the historical evolution of the Sub-Fund's main sustainability indicators over recent periods.

Sustainability Indicators	FY 2024	FY 2025
ESG Score	72.10	71.01
% Sustainable Investments	79.95%	83.56%

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The Sub-Fund partially invested in sustainable investments according to article2(17) SFDR during the reporting period.

The minimum proportion of 15% of sustainable investments was respected over the reporting period.

According to the Management Company the percentage of sustainable investment over the reporting period was 83.56%. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives (as more than 20% of its revenues aligned with the EU Taxonomy) is 4.12%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	4.05
climate change adaptation	0.00
the sustainable use and protection of water and marine resources	0.00
the transition to a circular economy	0.07
pollution prevention and control	0.00
the protection and restoration of biodiversity and ecosystems	0.00

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of

revenues contributing or obstructing with the goal, +10 imply a 100% contribution.

- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

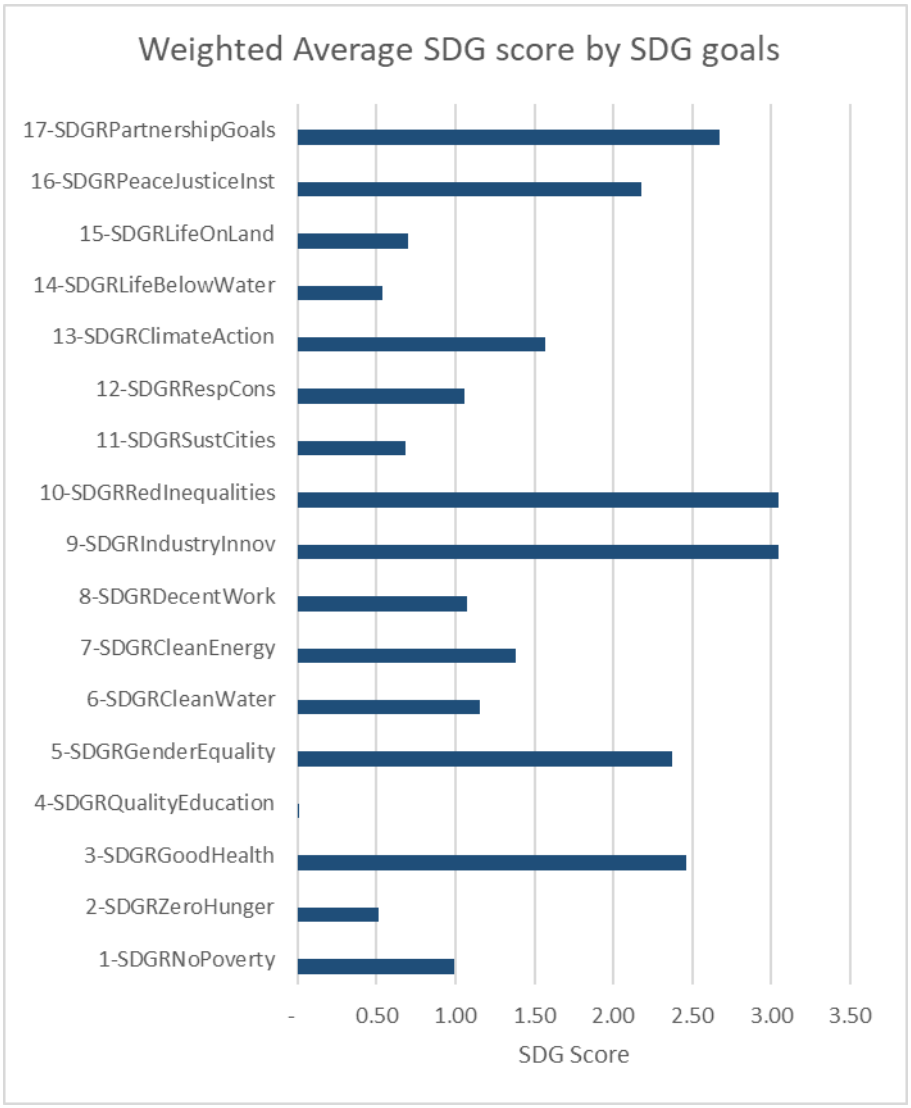
At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained

- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.
- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available. Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test. Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that all the sustainable invetsments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 83.56% in sustainable investments on average during the reporting period.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

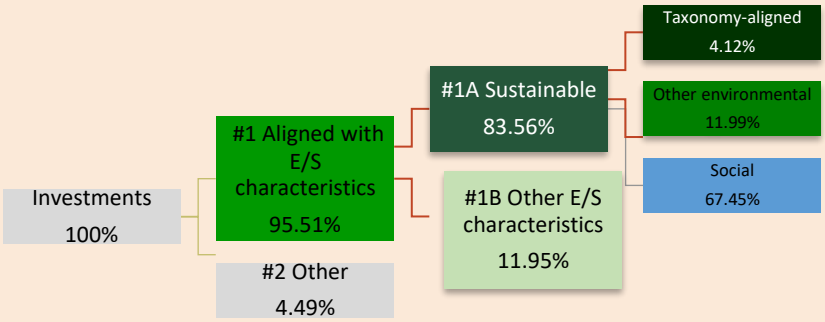
The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Category	FY 2024	FY 2025
#1 Aligned with E/S characteristics	96.14	95.51
#2 Other	3.86	4.49
#1A Sustainable	79.95	83.56
#1B Other E/S characteristics	16.18	11.95
Taxonomy aligned	2.8	4.12
Other environmental	1.28	11.99
Social	75.88	67.45

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 4.12% during the reporting period.

The calculation of Taxonomy-aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?**

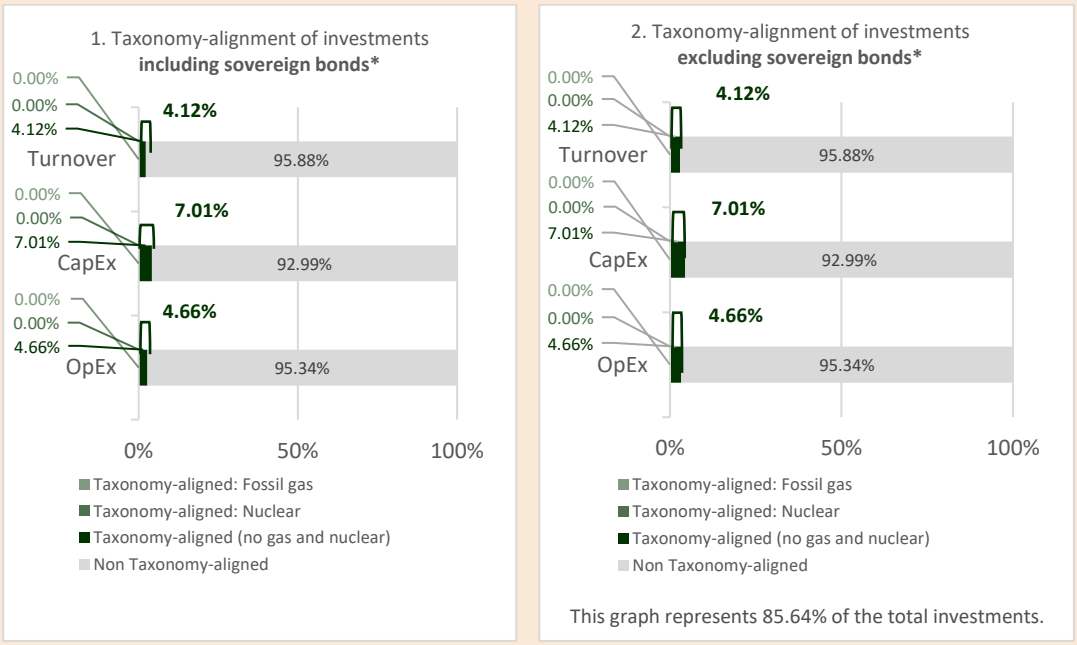
  ☐ Yes:

[13]Calculated as average weight over the 4 financial quarter

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[14]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.



* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What was the share of investments made in transitional and enabling activities?

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation. The average percentage of share of investment in transitional and enabling activities were 0.09 and 3.78, respectively.

[14] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CApEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2024	FY 2025
% EU Taxonomy-aligned	7.22%	4.12%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.

The share of sustainable investments with environmental objective not aligned to taxonomy was 11.99% on average during the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 67.45% on overage over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (4.49% in #2 Other at year end). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

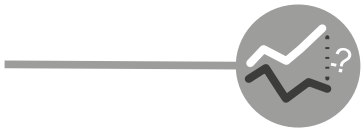
What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 74 companies and around 49.33% of the total portfolio and revolved around all several macro themes, among which Net Zero and Responsible Restructuring.



How did this financial product perform compared to the reference benchmark?

This is not applicable.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?`***

  This is not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Balanced Dynamic **Legal entity identifier:** 222100E2RI278S3YF708

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☐ **Yes** ☒ **No**

☐ It made **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made a **sustainable investments with a social objective:** ___%

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 59.06% of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

During the financial year, the NEF Ethical Balanced Dynamic (the "Sub-Fund") continuously promoted environmental and/or social characteristics by investing mainly in stocks and bonds issued by companies with good quality Environmental, Social and Governance (ESG) profiles. It notably used an ESG rating as further explained in the other sections of this periodic disclosure.

The ESG characteristics taken into account consider:

- the environmental aspect linked to limited carbon intensity.
- the social aspect linked to human rights in general.

The Investment Manager Amundi is committed to phase out thermal coal from its investments by 2030 in OECD countries and in 2040 in non-OECD countries.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

- ***How did the sustainability indicators perform?***

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics, which were as follows:

a. Sovereign issuers: During the year 2025, the Sub-fund has not invested in government bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:
   - FATF High Risk and monitored jurisdictions
   - EU, UN and OFAC Sanctions
   - Corruption Perception Index (CPI)
   - Know Your Country data (KYC)

   neither in countries that apply the death penalty; in case of a Federation the exclusion was implemented only to the individual Federal State that apply the death penalty.

b. Corporate bond and equity issuers:

- Companies involved in any activities related to controversial weapons; This requirement was in place for the full year 2025. The exclusion was respected.
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full year 2025.
- Companies whose main business activity is carried out in any of the following business areas: coal, exploration and production of unconventional oil and gas extraction (covering "shale oil and gas" and "oil sands"), alcohol, gambling and pornographic material; This requirement was in place and respected for the full year 2025.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:
   - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
   - They consider principal adverse impacts of its investment decisions on sustainability factors; and
   - Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Balanced Dynamic.

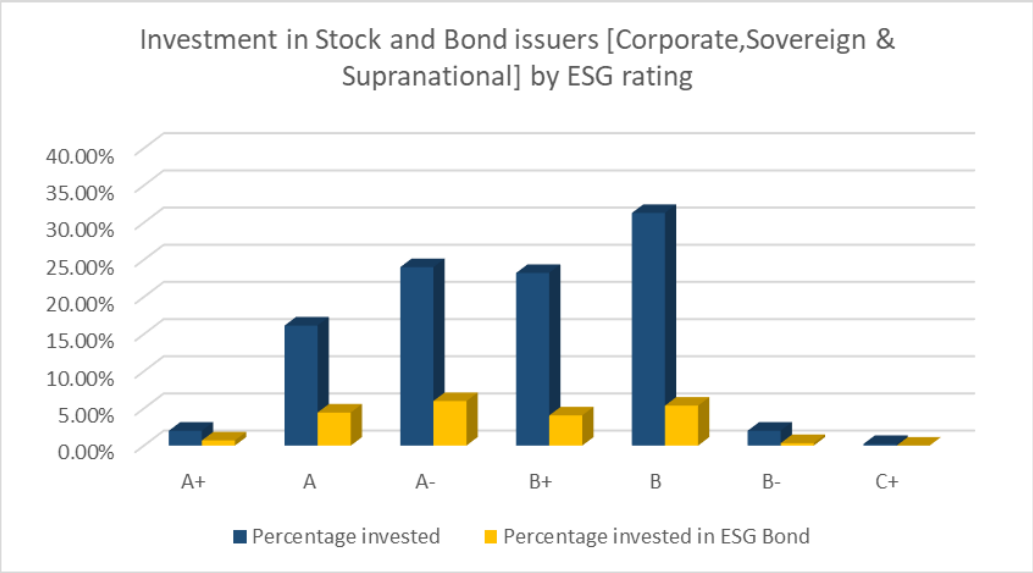
The portfolio was not invested in any UCIs/UCITS during the year.

Additionally, all issuers had an ESG rating. The Sub-Fund was invested all over 2025 in issuers with a ESG rating greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers.

The percentage invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects was 18.95% at year end and 20.89% on average.

Weighted average ESG score of the Sub-Fund according to Refinitiv (or equivalent third-party ESG rating provider), has been above 66.67 (B+) throughout the reporting period. The weighted average ESG score according was 72.23 (B+) on average during the reporting period.

The below graph shows the split of issuers by ESG rating at year end. The yellow bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

… and compared to previous periods?

Compared to the previous reportig period there was a slight upward shift in the average ESG score, from 69.07 in 2024 on average to 72.23 in 2025 on average. This is explained by a higher concentration of A- and B+ rated issuers.

The proportion invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects is slightly lower than the previous year, from 24.32% on average in 2024 to 20.89% on average in 2025, but the proportion of such instrument remain very high. Such bonds, being dedicated to finance only sustainable impactful projects, reinforced the Environmental and Social characteristics of the Sub-Fund.

Overall, the percentage of sustainable investments was higher in 2025 compared to 2024: 59.06% versus 56.26% on average. The increase in Sustainable Investments is partially explained by improved data quality and coverage from data providers.

The table below provides the historical evolution of the Sub-Fund's main sustainability indicators over recent financial years.

Sustainability Indicators	FY 2022	FY 2023	FY 2024	FY 2025
ESG Score	77.67	72.49	69.07	72.23
% Sustainable Investments	33.45%	48.57%	56.26%	59.06%

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-Fund partially invested in sustainable investments according to article 2(17) SFDR during the year.

The Investment Manager confirmed that the minimum proportion of 10% of sustainable investments was respected over the year 2025.

According to the Management Company the percentage of sustainable investment was 59.06% on average during 2025. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives is 3.52%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	3.27%
climate change adaptation	0.00%
the sustainable use and protection of water and marine resources	0.04%
the transition to a circular economy	0.20%
pollution prevention and control	0.01%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

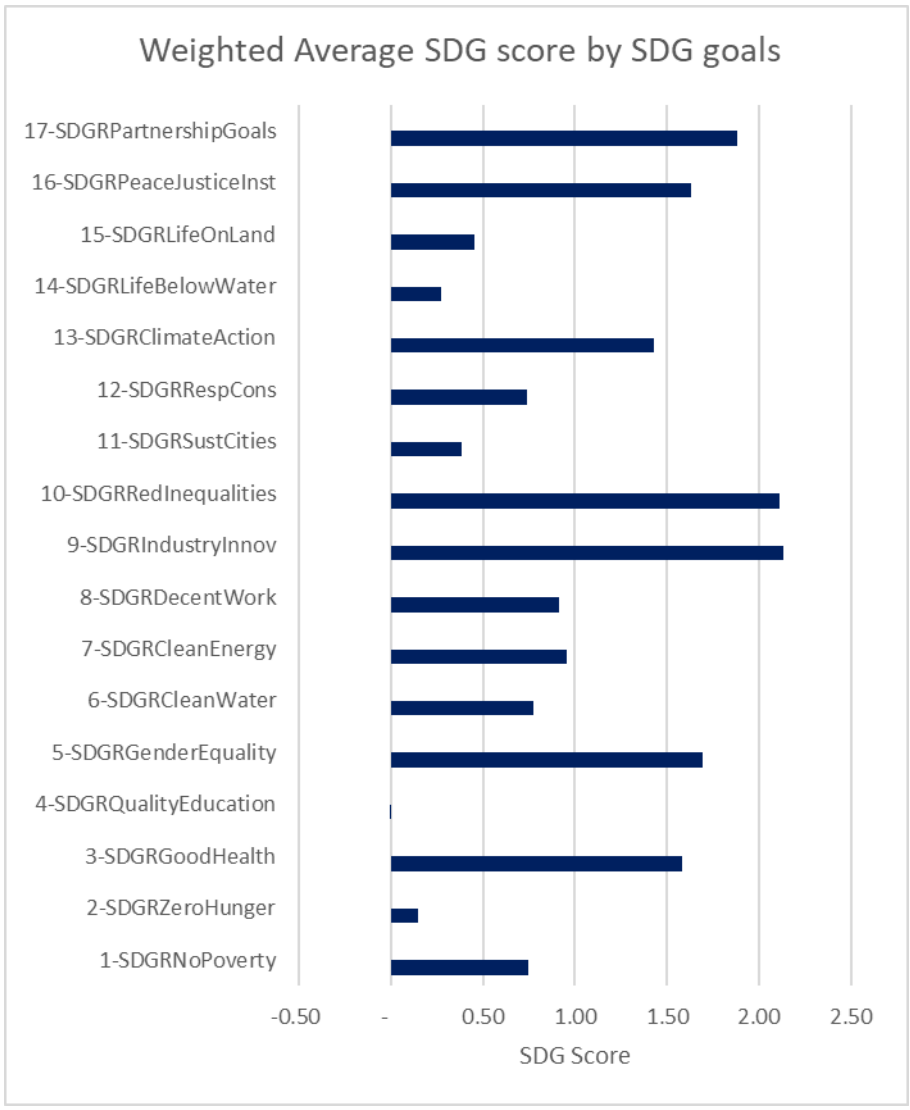
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective a DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained
- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.
- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available.
  Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test.
  Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test and in the engagement process.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country

[12] Calculate as average weight over the 4 financial quarter

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 59.06% in sustainable investments on average during the reporting period.

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

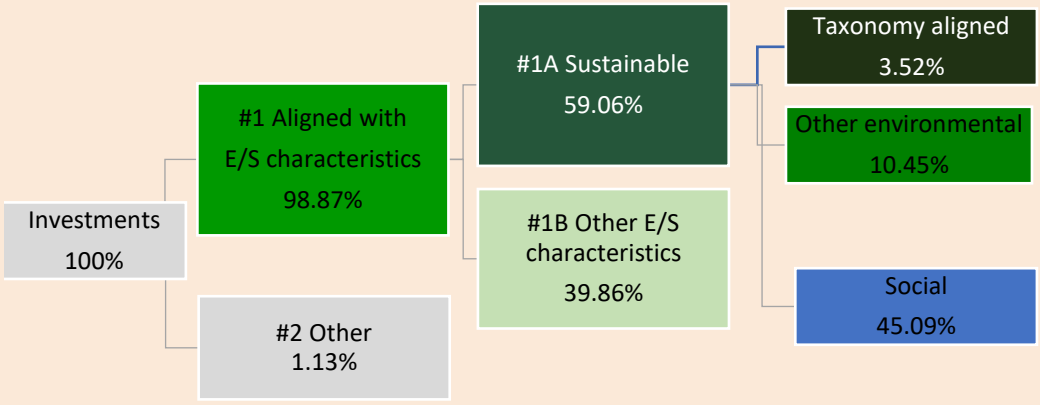
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Category	FY 2022	FY 2023	FY 2024	FY 2025
#1 Aligned with E/S characteristics	96.77	98.59	99.02	98.87
#2 Other	3.23	1.41	0.98	1.13
#1A Sustainable	33.45	48.57	56.26	59.06
#1B Other E/S characteristics	63.32	50.02	42.76	39.86
Taxonomy aligned	0	0	2.98	3.52
Other environmental	7.59	11.3	2.41	10.45
Social	25.86	37.27	50.87	45.09

In which economic sectors were the investments made?

Economic sectors of the investments made were:

Sector	Sub Sector	% Assets
Basic Materials	*Chemicals*	1.32%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 3.52% during the reporting period.

The calculation of Taxonomy aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?**

[X] Yes:

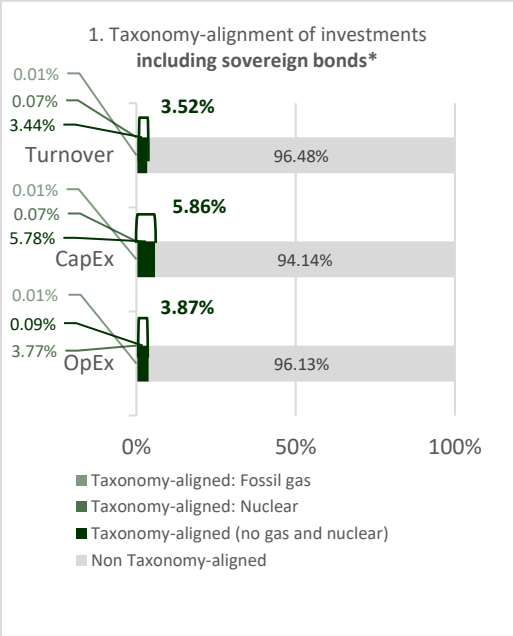
[X] In fossil gas [X] In nuclear energy

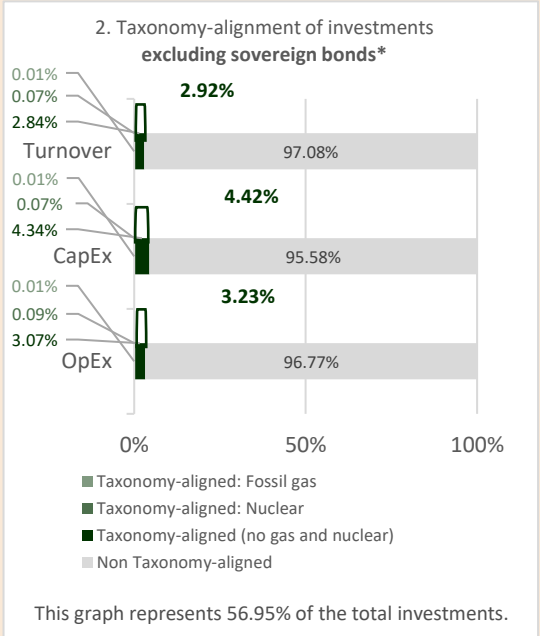
[ ] No

[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[13]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments in transitional and enabling activities?***

  An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.11% and 1.17%, respectively.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

  The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an envsironmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2022	FY 2023	FY 2024	FY 2025
% EU Taxonomy-aligned			2.98%	3.52%

[13] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.
The share of sustainable investments with an environmental objective not aligned to taxonomy was at least 10.45% on average over the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 45.09% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (1.13% in #2 Other). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 158 companies and around 74.88% of the total portfolio and revolved around all five macro themes: Transition Towards a Low Carbon Economy, Natural Capital Preservation, Product, Client, Societal Responsibility, Social Cohesion and Strong Governance for Sustainable Development.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or

This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?***

  This is not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Balanced Conservative **Legal entity identifier:** 549300VJBQJ1VJ63E142

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

- [ ] **Yes**
- [x] **No**

- [ ] It made **sustainable investments with an environmental objective:** ___%
  - [ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- [x] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 80.57% of sustainable investments
  - [x] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [x] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - [x] with a social objective
- [ ] It made a **sustainable investments with a social objective:** ___%
- [ ] It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

NEF Ethical Balanced Conservative (the "Sub-Fund") has promoted some environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in stocks and bonds issued by companies with good quality Environmental, Social and Governance (ESG). It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund has invested primarily in assets selected based on sustainability criteria. Sustainability has been understood to mean ecological (Environment - E) and social (Social - S) criteria as well as good corporate and government management (Governance - G). Corresponding criteria included limitation of CO2 emissions and labour relations (Social). When considering environmental and social characteristics, the Sub-Fund has invested in assets of issuers that have applied good corporate governance practices.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

- ***How did the sustainability indicators perform?***

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics, which were as follows:

a. Sovereign issuers: During the year 2025, the Sub-fund has not invested in government bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:
   - FATF High Risk and monitored jurisdictions
   - EU, UN and OFAC Sanctions
   - Corruption Perception Index (CPI)
   - Know Your Country data (KYC)
     neither in countries that apply the death penalty; in case of a Federation the exclusion was implemented only to the individual Federal State that apply the death penalty.

b. Corporate bond and equity issuers:

- Companies involved in any activities related to controversial weapons; This requirement was in place for the full year 2025. The exclusion was respected.
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full year 2025.
- Companies whose main business activity is carried out in controversial sectors such as coal, unconventional oil and gas, alcohol, gambling and adult entertainment are not investible; This requirement was in place and respected for the full year 2025.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:
   - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
   - They consider principal adverse impacts of its investment decisions on sustainability factors; and
   - Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Balanced Conservative.

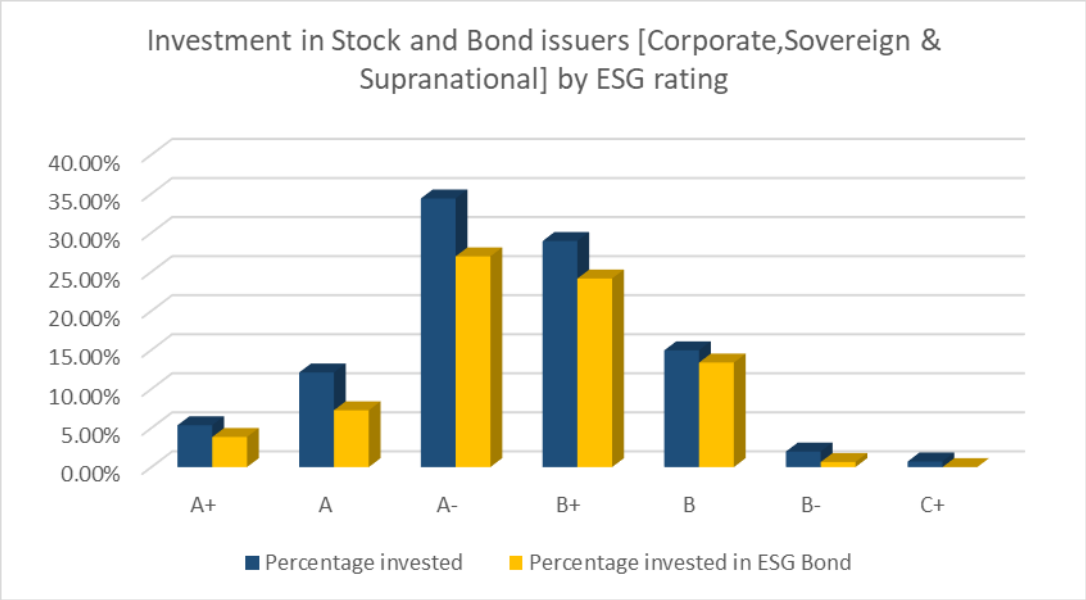
The portfolio was not invested in any UCIs/UCITS during the year.

Additionally, all issuers had an ESG rating or were either Green Bonds, Social Bonds, Sustainable Bonds or bonds linked to Sustainable / ESG / SDGs projects for which the rating of the issuers is not madatory. The Sub-Fund was invested in issuers with a ESG rating greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers.

The percentage invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects was 76.02% at year end and 76.29% on average.

Weighted average ESG score of the Sub-Fund according to Refinitiv (or equivalent third-party ESG rating provider), has been above 66.67 (B+) throughout the reporting period. The weighted average ESG score according was 74.02 (B+) on average during the reporting period.

The below graph shows the split of issuers by ESG rating at year end. The yellow bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

… and compared to previous periods?

Compared to the previous reportig period there was a slight upward shift in the average ESG score, from 72.10 in 2024 on average to 74.02 in 2025 on average. This is explained by a higher concentration of A- and B+ rated issuers.

The proportion invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects have slightly increased than the previous year, from 74.38% on average in 2024 to 76.29% on average in 2025, while the proportion of such instrument remain very high. Such bonds, being dedicated to finance only sustainable impactful projects, reinforced the Environmental and Social characteristics of the Sub-Fund.

Compared to the previous period the Exclusion criteria were increased, however those in commom were respected.

Overall, the percentage of sustainable investments was higher in 2025 compared to 2024: 80.57% versus 79.49% on average. The increase in Sustainable Investments is partially explained by improved data quality and coverage from data providers.

The table below provides the historical evolution of the Sub-Fund's main sustainability indicators over recent periods.

Sustainability Indicators	FY 2022	FY 2023	FY 2024	FY 2025
ESG Score	79.22	74.08	72.10	74.02
% Sustainable Investments	25.37%	55.24%	79.49%	80.57%

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-Fund partially invested in sustainable investments according to article 2(17) SFDR during the year.

The Investment Manager confirmed that the minimum proportion of 5% of sustainable investments was respected over the year 2025.

According to the Management Company the percentage of sustainable investment was 80.57% on average during 2025. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives is 6.85%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	6.50%
climate change adaptation	0.00%
the sustainable use and protection of water and marine resources	0.31%
the transition to a circular economy	0.04%
pollution prevention and control	0.00%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

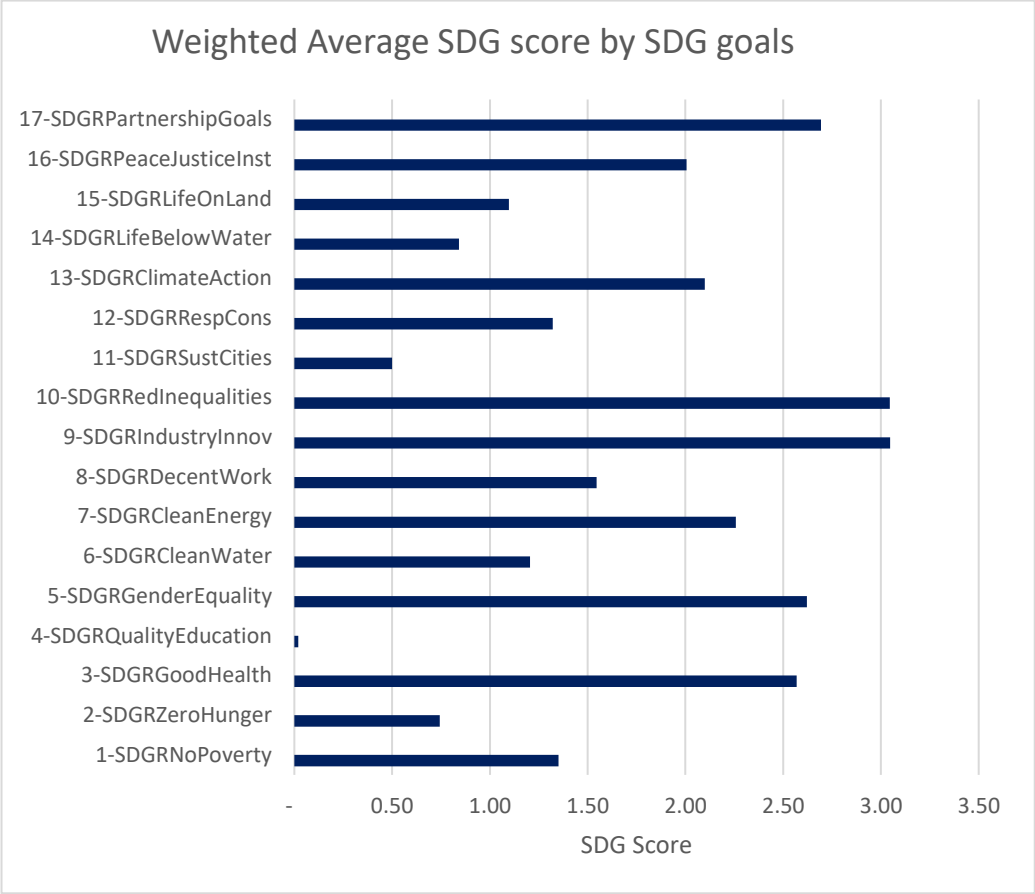
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective a DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained
- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.
- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available.
  Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test.
  Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The principal adverse impact of investments on sustainability factors ("Principal Adverse Impact" or "PAI") was considered by the Investment Manager in the purchasing of securities, money market instruments and investment shares. Indicators used to identify adverse impacts on sustainability factors from investments in companies were derived from the following categories: greenhouse gas emissions, biodiversity, water, waste and social and labour issues. For investments in securities of countries, indicators in the categories of environmental and social issues were taken into account

In the analysis of countries, PAIs were taken into account by the Investment Manager by excluding those countries that had a comparatively high GHG intensity. In addition, exclusions included unfree states that had a low score on the index issued by the international nongovernmental organization Freedom House.

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test and in the engagement process.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country
Italy, Republic of (Government)	IT0005542359	Government Activity	3.64	Italy

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 80.57% in sustainable investments on average during the reporting period.

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

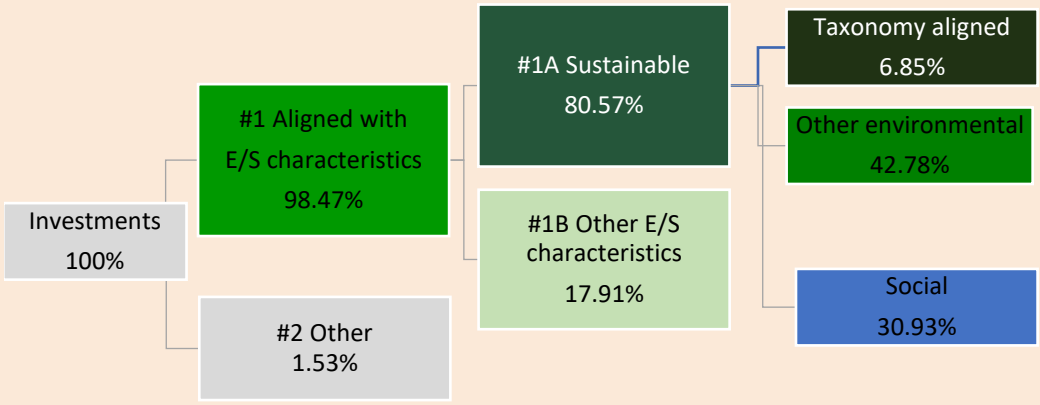
[12] Calculate as average weight over the 4 quarters

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Category	FY 2022	FY 2023	FY 2024	FY 2025
#1 Aligned with E/S characteristics	36.54	98.31	96.09	98.47
#2 Other	3.46	1.69	3.91	1.53
#1A Sustainable	25.37	55.24	79.49	80.57
#1B Other E/S characteristics	71.17	43.07	16.59	17.91
Taxonomy aligned	0	0	4.64	6.85
Other environmental	12.52	29.29	4.06	42.78
Social	12.85	25.95	70.8	30.93

In which economic sectors were the investments made?

Economic sectors of the investments made were:

Sector	Sub Sector	% Assets
Basic Materials	*Chemicals*	0.53%
	Containers & Packaging	0.78%
	Metals & Mining	0.00%
	Construction Materials	0.00%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 6.85% during the reporting period.

The calculation of Taxonomy aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?

[X] Yes:

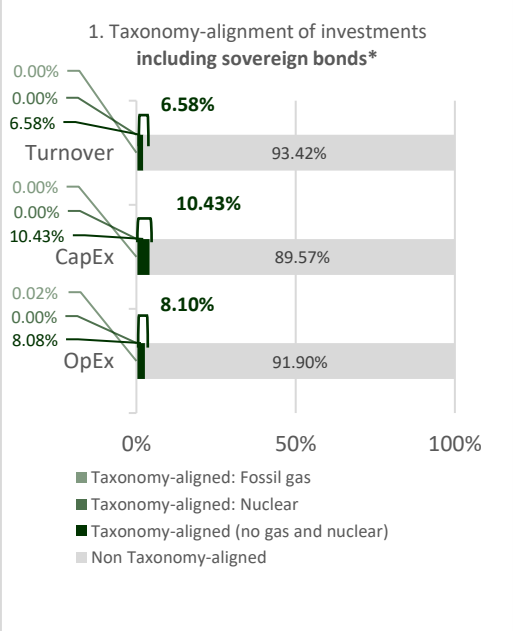
[X] In fossil gas [ ] In nuclear energy

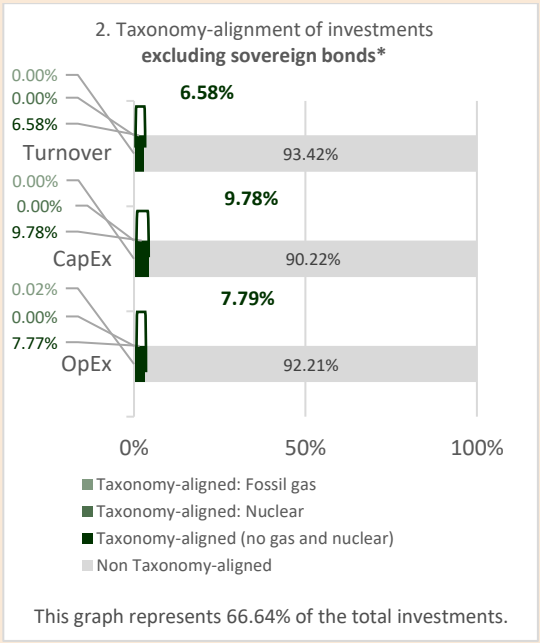
[ ] No

[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy[14]. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments in transitional and enabling activities?***

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.02% and 3.64%, respectively.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2022	FY 2023	FY 2024	FY 2025
% EU Taxonomy-aligned			4.64%	6.85%

[14] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.
The share of sustainable investments with an environmental objective not aligned to taxonomy was at least 42.78% on average over the reporting period.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 30.93% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (1.53% in #2 Other). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 85 companies and around 23.70% of the total portfolio.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This is not applicable.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

  This is not applicable.

- ***How did this financial product perform compared with the broad market index?***

  This is not applicable.

ANNEX V

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Global Trends **Legal entity identifier:** 549300DNUKGH7RL05J13

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☒ It made **sustainable investments with an environmental objective:** 1.40%	☐ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments
☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☒ It made **sustainable investments with a social objective:** 89.47%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

The Sub-Fund sustainable investment objective is to advance the United Nation Sustainable Development Goals (SDGs) by investing in firms that are functional to their achievement and with good quality Environmental, Social and Governance (ESG) profiles. Consequently, the Sub-Fund was solely invested in companies that hold a positive SDG score based on the Investment Manager's internally developed SDG analysis. The process to verify whether and

to what extent the companies were instrumental to the achievement of the SDG consisted of three different stages: ¨

Investee company SDG analysis

The objective of the analysis is to define whether a company contributes to the SDGs achievement.

The SDG analysis is divided into three phases.

1) The first phase is composed by the *Exposure to SDG Business*: the percentage of the business that is functional to SDGs' achievement. The analyst explains the rationale behind the choice and provides clear evidence for the reader, taking into consideration of the several peculiarities of the sectors in which the firms operate.

2) The second phase is the *SDG Repercussion*, that is composed by the analysis of the positioning of the company in the SDGs related business and by the measurement of the SDGs functionality of the company's business.
- The positioning analysis is related to how much the company is needed in order for this SDG related business to continue smoothly; asking what the negative repercussions would be (like for example, higher prices, lower quality, less supply) if the company were to discontinue it. Clearly, the market share in the area of activity is very important here.
- The SDGs functionality represents the "intensity" of the SDG exposure. The business exposure provides the exposure in terms of volume, but each activity can have a different "intensity" in terms of importance for the SDGs achievements. For example, producing cheap furniture for offices helps to set up new activities but the revenue has a lesser SDG intensity than, for example, producing windmills.

3) The third phase is *Business Growth*: the analyst verifies whether the SDG related business of the company is growing and whether and to what extent the company is investing in this business.

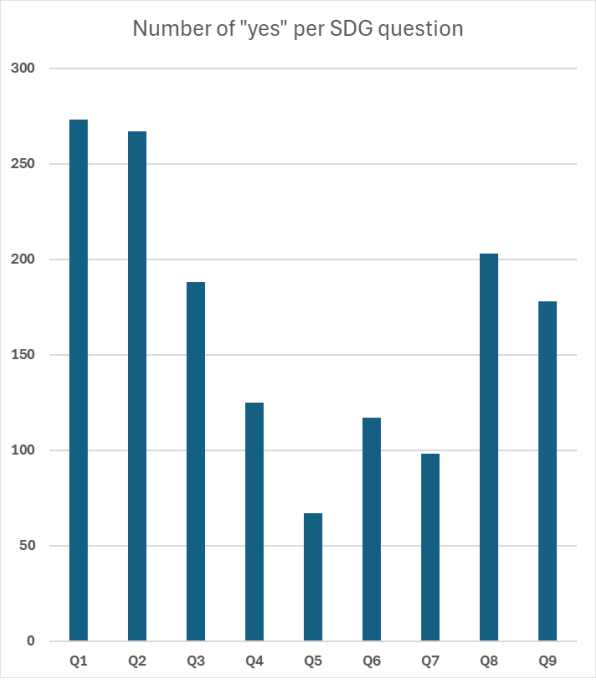
The results of the 3 steps analysis are embodied in a matrix as shown here below (BB rating is considered the minimum threshold):

% SDG Business	SDG Repercussion				
	Very High	High	Medium and growing	Medium	Low
90%-100%	AAA	AA	A	BBB	BB
50%-90%	AA	AA	BBB	BB	CCC
25%-50%	A	A	BBB	BB	CC
0-25%	A	BBB	BB	B	C

SDG Score	Numerical score	Description
AAA	10	Indicates a **very high** contribution to the SDGs in terms of mix of business activity, repercussions, market positioning, and SDG business growth.
AA	9	Indicates a **high** contribution to the SDGs in terms of mix of business activity, repercussions, market positioning, and SDG business growth.
A	8	
BBB	7	Indicates a **positive** contribution to the SDGs in terms of mix of business activity, repercussions, market positioning, and SDG business growth.
BB	6	
B	5	Indicates a **minor, neutral, or negative** contribution to the SDGs in terms of mix of business activity, repercussions, market positioning, and SDG business growth.
CCC	4	
CC	3	
C	≤2	

The SDG analysis is complemented by internally developed industry-specific SDG frameworks to establish a more standardized and objective approach to compare the SDG performance of each portfolio company within its industry characteristics. The SDG frameworks provide guidance on the analysis of SDG performance on each one of the three SDG analysis phases per industry.

In addition, in 2025, a new section was added to the analysis to also analyse investee companies ***SDG Background and Focus***: This section has been added to assess the company's public level of commitment and action toward the SDGs. By analysing if the company show commitment in the following area: SDG Commitment, SDG Materiality assessment, SDG Targets, and SDG Action.



SDG Commitment	
Q1	•Does the company mention the SDG?
Q2	•Does the company publish SDG commitment Statement?
Q3	•Are the company a UNGC signatory?
SDG Materiality assessment	
Q4	•Has the company conducted an SDG materiality assessment to identify the SDGs/sustainability issues most relevant to their business operations and stakeholders?
Q5	•Is this analysis, including the methodology and stakeholder engagement process, publicly disclosed?
SDG Targets	
Q6	•Are there any KPI/targets related to the material SDG areas?
Q7	•Is there reporting on their progress against these targets
SDG Action	
Q8	•For identified material SDGs, can the company provide specific examples of initiatives, projects, or changes in business practices that have been implemented?
Q9	•Are these initiatives integrated into just their core business strategy and operations, rather than being standalone CSR activities?

If the company's SDG reporting doesn't meet the level (3 out of 9) deemed sufficient based on the scoring, the IM engages with the firm to increase their awareness of the SDGs and

encourage further participation in achieving these goals. The IM also notes down any specific SDG related engagement/conversation held with the firm in this section.
At the end of 2025, 21 out of 288 companies — representing 3.4% of the weighted equity portfolio at year end — did not publicly report a strong commitment to the Sustainable Development Goals. Engagements were initiated with all of these companies to improve company-specific SDG disclosure, as the internal analysis demonstrates that their activities already contribute to identifiable SDGs.

Portfolio SDG analysis

The Investment Manager has identified 28 themes, called *TrendSDG*, which are pivotal to the achievement of one or more of the Sustainable Development Goals (SDGs). Each of these themes (*TrendSDG*) is represented by a correlated portfolio of companies. The Investment Manager calculates the SDG impact of each portfolio (SDG score).

Below it is highlighted which SDGs are relevant to each *trendSDG* (the 28 *trendSDG*, for convenient reading, have been grouped into 7 macro-themes: Infrastructure, Mobility, Health, Materials, Finance, Food and Communication).

Infrastructure	
Waste and sewage Management	
Smart Housing	
Globalisation of Transport	
Renewable Energy	
Civil Infrastructures	
Infrastructure for work	

Mobility	
Electric Mobility	
Smart Mobility	

Health 	
Ageing Population	
Epidemic and Pandemic Prevention	
Genetics and Diagnostics	
Generic medicines	
Oncology	
Psychiatric disorders	

Materials 	
Plastic and Steel Substitution	
Fibres for the Future	
Recycling materials	

Finance 	
Responsible Asset Management	
Good Insurance	
Good Banking	

Food

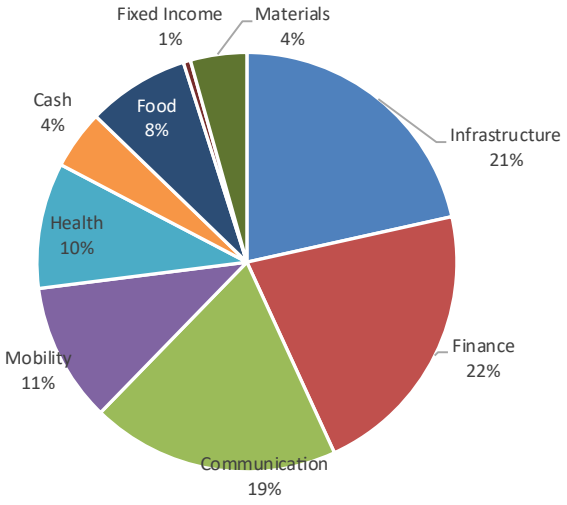
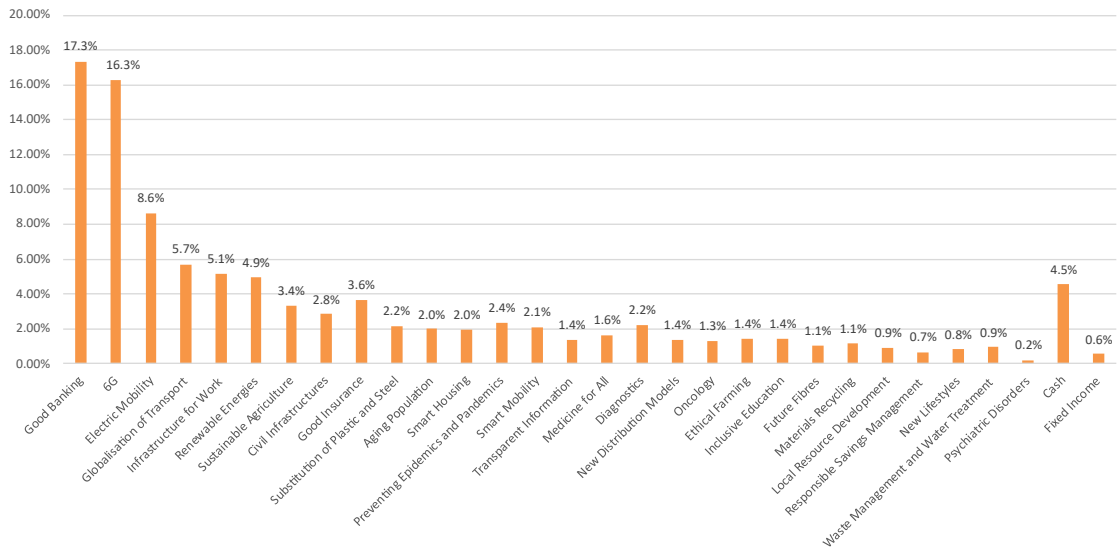
New Lifestyles	
Local Resource Development	
Sustainable Agriculture	
New Distribution Models	

Communication 	
5G	
Inclusive Education	
Transparent Information	

Investment by SDG Themes on average over 2025





SDG impact of the portfolio as of 31 December 2025

The SDG Impact of the portfolio throughout the year is calculated on the basis of the yearly weighted average of the portfolio's SDG Impact multiplied by the average equity weight of the portfolio (Table B).

The yearly weighted average portfolio's SDG Impact is calculated using the average of the monthly portfolio's SDG Impact.

The monthly portfolio's SDG Impact is calculated using the average Impact of the single monthly trendSDG (portfolios).

The monthly trendSDG (portfolios) impact is calculated using the weighted average of the SDG Impact of each stock in the trendSDG portfolio. (Table A)

Table A:

	Average of SDG Score
Sustainable Agriculture	8.6
Ethical Farming	9.0
Inclusive Education	8.1
Renewable Energies	8.9
Responsible Savings Management	6.6
Globalisation of Transport	7.6
Transparent Information	7.4
Civil Infrastructures	8.0
Infrastructure for Work	8.0
Aging Population	8.5

Good Insurance	7.9
Good Banking	8.1
Medicine for All	8.1
Future Fibres	8.4
Electric Mobility	8.3
New Distribution Models	7.9
New Lifestyles	8.7
Preventing Epidemics and Pandemics	8.2
Smart Housing	7.9
Smart Mobility	8.7
Substitution of Plastic and Steel	8.6
Diagnostics	8.8
Oncology	9.1
Psychiatric Disorders	8.2
Materials Recycling	8.1
Waste Management and Water Treatment	8.7
Local Resource Development	8.5
6G	8.4
PORTFOLIO AVERAGE	**8.2**

Table B:

SDG exposure in terms of weight	94.9%	a
Average Weighted SDG Portfolio score	8.2	b
Portfolio Score	7.8	C = a * b

Therefore all securities included in the portfolio were functional to the achievement of the SDG according to the above mentioned methodology.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives is 0.60%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their

revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	0.55
climate change adaptation	0.00
the sustainable use and protection of water and marine resources	0.01
the transition to a circular economy	0.03
pollution prevention and control	0.01
the protection and restoration of biodiversity and ecosystems	0.00

The Management Company is independently assessing the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

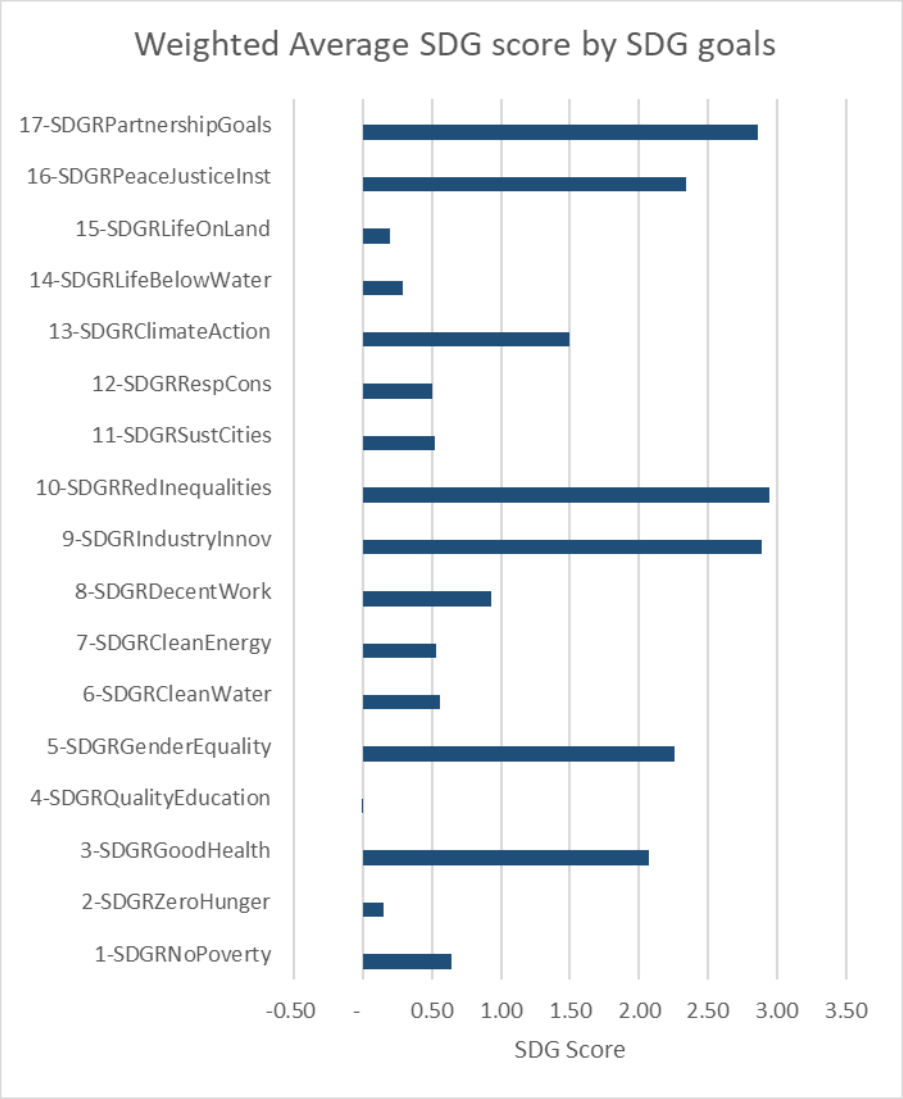
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillar scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



The SDGs are focused on the positive development of the society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put together for the world to move towards a positive direction, to this extent it is considered that SDGs are contributing to social objectives only.

Additionally, all invested companies had good quality Environmental, Social and Governance (ESG) profiles.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

It is confirmed that there were no exceptions to the exclusion policy during the year 2025, both from the Investment Manager side and from the Management Company oversight.

- ***How did the sustainability indicators perform?***

Indicator	*2024*	*2025*
Percentage of investee companies with a positive SDG score	*100%*	*100%*
Percentage of investee companies which the Investment Manager engaged upon their functionality to Sustainable Development Goals and the minimization of their negative impact during the year [1]	*47.89%*	*34.14%*
The percentage of holdings that are in violation of the OECD Guidelines for Multinational Enterprises, ILO standards, UNGPs, or UNGC	*0%*	*0.11%*

**This is a year end snapshot.*

According to the Investment Manager's internally developed SDG analysis, all the companies in the portfolio presented a positive SDG score. The portfolio consisted on average during the reporting period of:

- 10.7% companies with SDG AAA rating,
- 53.2% with AA rating,
- 19.2% with A rating,
- 14.5% with BBB rating,
- 2.4% with BB rating which is considered the minimum threshold.

The Investment Manager engaged with 34.14% of the investee companies held in the portfolio, where elements emerged from the ESG, DNSH, SDG, and Controversies analysis to minimize the companies negative impact during the year.

The percentage of holdings that were in violation of the OECD Guidelines for Multinational Enterprises, ILO standards, UNGPs, or UNGC is equal to 0% of the Net Asset Value as year end (31/12/25). On an average basis over the year, this figure was 0.11%, reflecting a single holding that was confirmed to be in violation and subsequently divested promptly from the portfolio.

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

- ***…and compared to previous periods?***

The percentage of investee companies with a positive SDG score remained at 100% in the reporting year of 2025 in line with the sustainable objective of the fund outlined above.

In 2023, NicheAM introduced a more granular SDG scoring methodology, supported by internally developed, industry-specific frameworks, to better differentiate the level and quality of portfolio companies' contributions to the UN Sustainable Development Goals. This marked a step change in the robustness and comparability of SDG assessments across the portfolio.
This methodology continued to evolve through 2024, incorporating additional industry research and more stringent analytical criteria, which resulted in a recalibration of scores through the SDG analyses.
In 2025, NicheAM continued to update SDG analyses as part of its ongoing review cycle, under which SDG assessments are refreshed prior to expiry period. As older SDG analyses conducted before 2023 were progressively reassessed using the updated methodologies as the expiration date was approaching, this further reshaped the scoring landscape. As a result, the proportion of companies rated AAA increased from 4.9% to 10.7%, reflecting updated SDG assessments of medical and healthcare-related companies, which are rated more highly under the revised methodology than under the previous SDG analyses. Going into the following year, majority of SDG analyses in the portfolio will be updated to the latest methodology.

The percentage of investee companies that the Investment Manager engaged with regarding their alignment to the Sustainable Development Goals and efforts to minimize negative impacts, decreased from 47.89% in 2024 to 34.14% in 2025. The Investment Manager maintained a targeted approach, engaging mainly with companies initially identified as having issues based on ESG, DNSH, SDG, Minimum Safeguards, and Controversy analyses, in line with its sustainable investment strategy. Within the 34.14% of engaged companies, 25.69% were engaged on DNSH-related dynamics as part of broader engagement dialogues. Among these DNSH-focused engagements, 67.7% of the contacted companies were responsive. All responsive companies either demonstrated willingness to improve future practices or disclosures, or, more commonly, provided explanations clarifying that the apparent numerical deterioration did not reflect an underlying deterioration in DNSH-related dynamics. If a company consistently exhibits material negative trends in the same indicator over a two-year period, as identified by DNSH analyses, and also fails to respond to engagement regarding these trends, the stock will be frozen as an escalation measure.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

In addition to DNSH and other engagements such as SDG growth-related engagements, at the end of 2025, 21 out of 288 companies, representing 3.4% of the weighted equity portfolio, did not publicly disclose a strong commitment to the Sustainable Development Goals. Engagements were initiated with all of these companies to improve company-specific SDG disclosure, as the internal analysis demonstrates that their activities already contribute to identifiable SDGs.

The monitoring activity of violations of the OECD Guidelines for Multinational Enterprises, ILO standards, UNGPs, or UNGC is an ongoing process. Same to the previous year, the percentage of holdings that were in violation of the OECD Guidelines for Multinational Enterprises, ILO standards, UNGPs, or UNGC is equal to 0% of the Net

Asset Value as year-end (31/12/25). However, on an average basis over the year, this figure was 0.11%, reflecting a single holding that was confirmed to be in violation and subsequently divested promptly from the portfolio.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

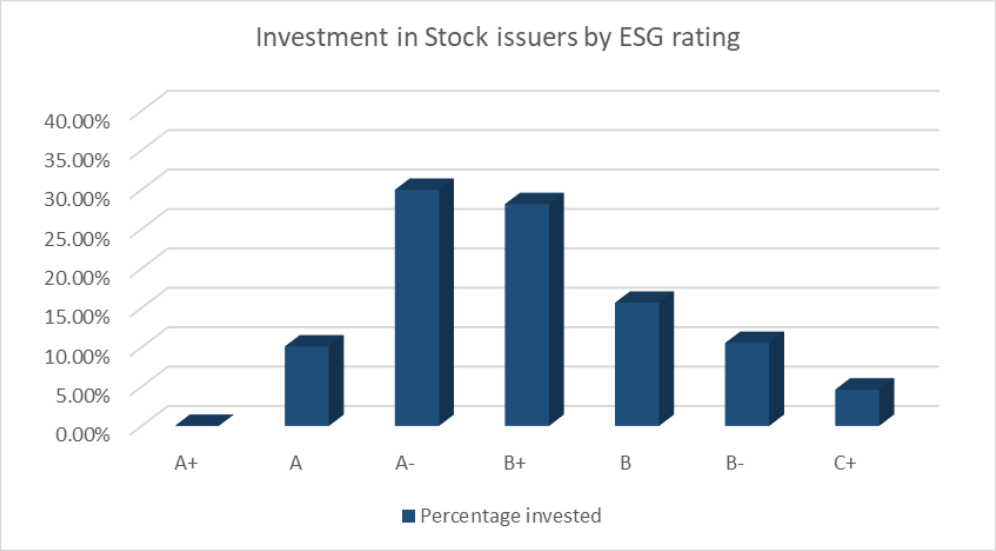
Sustainable investments were assessed against the DNSH criteria to ensure they did not cause significant harm.

How were the indicators for adverse impacts on sustainability factors taken into account?

All the indicators for adverse impacts on sustainability factors from Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 were taken into account through a combination of internal analysis processes as detailed in the following table relative to PAI consideration.

For what regards the Do Not Significantly Harm ("DNSH"), the focus of analysis did not only consist of examining the intensity recorded for each principal adverse impact indicators (PAIs), but first and foremost its dynamics (PAI evolution analysis). It is considered particularly important that each of investee company demonstrates an improving trend with respect to sustainability factors, both from an environmental and social point of view, that shows that the company is gradually minimizing its negative impact of its business. In some cases, this process required dialogue with the investee company to understand the evolution of the environmental and social adverse impact indicators.

The mitigation of adverse impacts was also pursued through other processes. For what concerns the ESG analysis, the average ESG score of the portfolio during the year was 69.99. According to Refinitiv's classification, this score is in the higher end of the third quartile and indicates: "good relative ESG performance and above average degree of transparency in reporting material ESG data publicly." In terms of dynamics, the ESG score remained mainly flat throughout the year. The ESG score has never been below the minimum threshold (65).



Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

With regard to the exclusion policy, the Sub-Fund excluded from its eligible universe the following companies:

- Companies involved in any activities related to controversial weapons; The exclusion was respected for the full 2025.
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare; This requirement was respected for the full year 2025.
- Companies involved in the cultivation and production of Tobacco, this requirement was respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprise. This requirement was respected the full year 2025. However, a single holding was confirmed to be in violation weighting 0.11% on average during the year.

- Companies whose main business activity is carried out in any of the following business areas:
    - Coal
    - Gambling
    - Integrated Oil and Gas
    - Oil and Gas Exploration and Production
    - Oil and Gas Drilling
    - Oil-related Services and Equipment
    - Pornographic material

this requirement was in place and respected for the full year 2025.

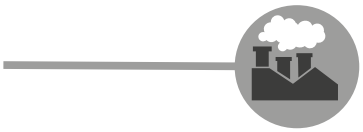
For what regard the Minimum Safeguards and Controversies analysis, please refer to the section "What actions have been taken to attain the sustainable investment objective during the reference period?"

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

At the moment of purchase, the Investment Manager verified to the best of its knowledge that the Sub-Fund investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. This assessment was done via direct contact with the investee companies and by the controversy analysis.

Sub-Fund investments were then continuously monitored. In those cases where a material issue / controversy emerged was then investigated.

Throughout 2025, a material violation of the OECD Guidelines for Multinational Enterprises, ILO standards, UNGPs, or the UN Global Compact was confirmed in July 2025 for one firm, and the stock was sold accordingly. The company had already been frozen (with no direct increase in exposure permitted) since the previous year while further investigations were conducted to determine whether a violation had indeed occurred. On an average basis, this security represented 0.11% of the portfolio.



How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund considered principal adverse impacts of its investment decisions on sustainability factors. The principal adverse impacts were embedded on several processes as reported here below:

Principal adverse impacts on investment decisions	ESG Score	Exclusion strategy	DNSH analysis	Minimum Safeguard	Controversies	Engagement	PAI evolution analysis
1. GHG emissions	Yes		Yes			Yes	Yes
2. Carbon footprint	Yes		Yes			Yes	Yes
3. GHG intensity of investee companies	Yes		Yes			Yes	Yes
4. Exposure to companies active in the fossil fuel sector		Yes	Yes			Yes	Yes
5. Share of non renewable energy consumption and production	Yes		Yes			Yes	Yes
6. Energy consumption intensity per high impact climate sector	Yes		Yes			Yes	Yes
7. Activities negatively affecting biodiversity sensitive areas	Yes		Yes		Yes	Yes	Yes
8. Emissions to water + (Emissions to Water / revenues)*	Yes		Yes			Yes	Yes
9. Hazardous waste ratio + (hazardous waste / revenues)*	Yes		Yes			Yes	Yes
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises			Yes	Yes	Yes	Yes	Yes
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises			Yes	Yes	Yes	Yes	Yes
12. Unadjusted gender pay gap			Yes		Yes	Yes	Yes
13. Board gender diversity			Yes			Yes	Yes
14. Exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons)		Yes	Yes			Yes	Yes

During 2025, the Sub-Fund considered the principal adverse impacts on sustainability factors in line with its pre-contractual disclosures. Monitoring was based on the most recent complete issuer-level datasets (e.g., FY2024 compared with FY2023 or FY2022), which informed investment decisions throughout the year at the company level.

For the numerical PAI indicators, the majority of issuers in the portfolio showed stable or improving values. A limited number of issuers, representing approximately 8% of NAV, displayed deteriorations above the Investment Manager's internal variation threshold for one or more PAI indicators. These cases were subject to enhanced monitoring and engagement during 2025, which included escalation procedures and, where relevant, temporary investment freezes.

The deterioration observed at the aggregate portfolio level is therefore primarily attributable to this small group of issuers and modest changes in portfolio exposure. Importantly, when assessed at the company level, the main contributors to the worsening

portfolio-level trends did not exhibit deteriorating underlying performance; for example, emissions levels and emissions intensity metrics generally remained flat or stable.

However, small increases in portfolio exposure to certain holdings, around 0.5% in portfolio weighting between 2024 and 2025 for the two largest contributors, had a disproportionate impact on the aggregate PAI results. This is largely due to the methodology used to attribute financed emissions, under which emissions are allocated based on the proportion of a company's enterprise value attributable to the investment, multiplied by the company's total emissions.

As a result, investments in companies with relatively smaller enterprise values but higher emissions profiles, such as those operating in emissions-intensive sectors like cement production, can contribute disproportionately to the portfolio's attributed emissions, even when their portfolio weight remains relatively small (below 1%) and the company-level emissions remain flat or improving. Consequently, modest increases in exposure to such companies can lead to a higher concentration of attributed emissions and a deterioration in certain PAI indicators over the reporting period.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01 January 2025 to 31 December 2025

Largest Investments[1]	Isin code	Sector	% Assets	Country
UBS Group AG	CH0244767585	Financials	2.82	Switzerland

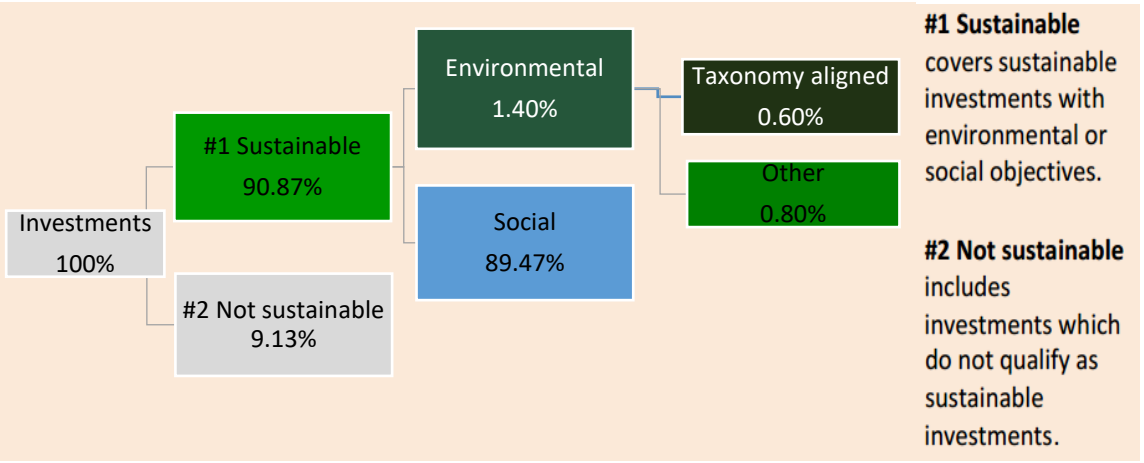
What was the proportion of sustainability-related investments?

The Sub-Fund was invested 90.87% in sustainable investments on average during the year 2025.

What was the asset allocation?

The respective share of fund assets is shown as a percentage as of average of the reporting period.



Asset allocation describes the share of investments in specific assets.

Category	FY 2022	FY 2023	FY 2024	FY 2025
#1 Sustainable	99.00	99.35	98.69	90.87
#2 Not sustainable	1.00	0.65	1.31	9.13
Environmental	0	0	2.28	1.40
Social	99.00	99.35	96.41	89.47
Taxonomy aligned	0	0	2.28	0.60
Other environmental	0	0	0	0.80

- ***In which economic sectors were the investments made?***

Economic sectors of the investments made were:

Sector	Sub Sector	% Assets
Basic Materials	*Chemicals*	4.32%
	Containers & Packaging	0.82%
	Metals & Mining	3.39%
	Construction Materials	1.09%
	Paper & Forest Products	0.96%
Consumer Cyclicals	*Textiles & Apparel*	0.03%
	Automobiles & Auto Parts	3.03%
	Specialty Retailers	0.15%
	Homebuilding & Construction Supplies	1.34%
	Leisure Products	0.00%
	Hotels & Entertainment Services	0.78%
	Media & Publishing	3.13%
	Diversified Retail	0.52%
	Household Goods	0.00%
Consumer Non-Cyclicals	*Personal & Household Products & Services*	0.09%
	Food & Tobacco	3.73%
	Food & Drug Retailing	1.83%
	Beverages	0.00%
	Consumer Goods Conglomerates	0.01%
Energy	*Renewable Energy Equipment & Services*	0.69%
	Oil Related Services and Equipment	0.00%
	Oil & Gas Refining and Marketing	0.55%
	Oil & Gas Transportation Services	0.00%
	Integrated Oil & Gas	0.00%
	Oil & Gas Exploration and Production	0.00%

	Office Equipment	0.21%
Utilities	*Multiline Utilities*	1.59%
	Electric Utilities & IPPs	1.46%
	Natural Gas Utilities	0.00%
	Water & Related Utilities	0.00%

** Please note that the investment made in "Oil & Gas Refining and Marketing" sector, does not fall in one of the excluded sector defined in the exclusion policy and therefore is accepted*

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. However, the Sub-Fund was invested in sustainable investments with an environmental objective aligned with the EU Taxonomy on average 0.60% in 2025. The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 0.60% during the reporting period.

The calculation of Taxonomy-aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[2]?

☒ Yes:

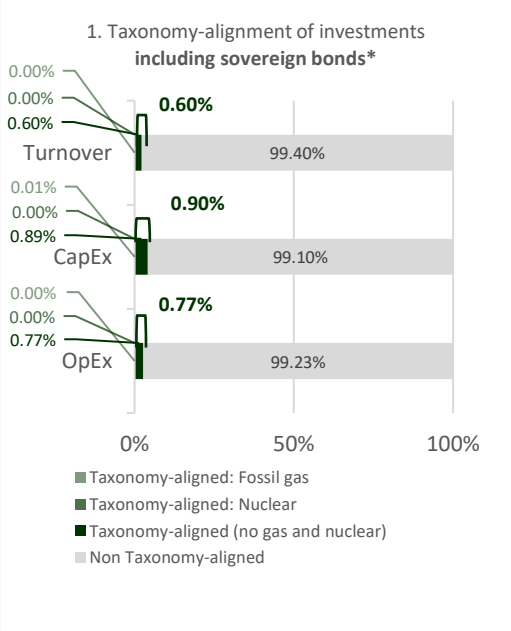
☒ In fossil gas ☐ In nuclear energy

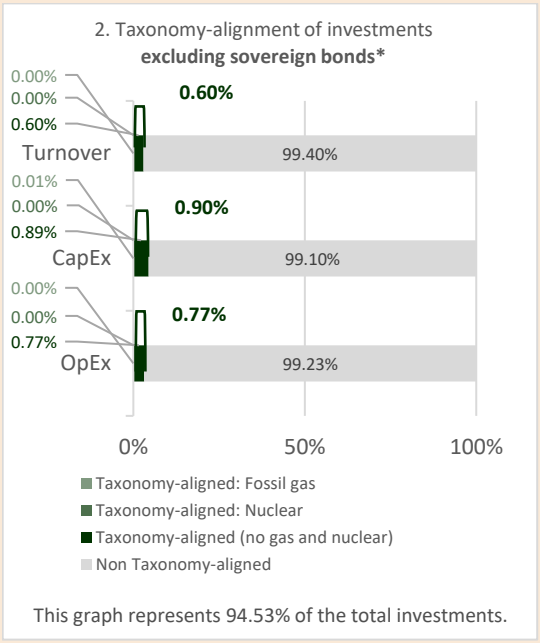
☐ No

Reliable data regarding fossil gas and/or nuclear energy related activities were not available during the reference period.

[2] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

What was the share of investments made in transitional and enabling activities?

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.00 and 0.28, respectively.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

The Sub-Fund does not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Nevertheless, the table below reports the percentage of investments aligned with the EU Taxonomy for the past reference periods in which such a calculation was performed:

	FY 2022	FY 2023	FY 2024	FY 2025
% EU Taxonomy-aligned			2.28%	0.60%

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities. The share of sustainable investments with an environmental objective not aligned to taxonomy was at least 0.80% on average over the reporting period.

What was the share of socially sustainable investments?

The socially sustainable investments were 89.47% of the Sub-Fund pursuant to Article 2(17) SFDR

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The "other" investments, representing 9.13% on average over the year, included only cash and derivatives that were used by the portfolio management respectively for liquidity and hedging/investment purposes and for which no minimum safeguards were applied.

What actions have been taken to attain the sustainable investment objective during the reference period?

The actions taken to fulfil the sustainable objective were:

Engagement. The percentage of total engagement with investee companies at year end by portfolio weight decreased from 47.89% in 2024 to 34.14% in 2025. The Investment Manager mainly maintained a targeted approach, engaging mainly with companies initially identified as having issues based on ESG, DNSH, SDG, Minimum Safeguards, and Controversy analyses, in line with its sustainable investment strategy. But additional engagements were made where specific opportunities to speak with companies came up, for example to engage further on SDG business growth.
Within the 34.14% of engaged companies, 25.69% were engaged on DNSH-related dynamics as part of broader engagement dialogues. Among these DNSH-focused engagements, 67.7% of the contacted companies were responsive. Responsive companies fell under two major categories as of this year.

- 88.3% of the respondent companies provided a recognizable reason for all negative trends of the data found through the DNSH analysis which explained that there was no negative dynamic. Though in some cases, additional engagement was made on top of this, for example to enhance reporting on not yet published PAI indicators.
- For 11.7%, at least one engagement took place to improve upon any negative dynamics found from the DNSH to encourage improvement on the future.

If a company consistently exhibits material negative trends in the same indicator over a two-year period, as identified by DNSH analyses, and also fails to respond to engagement regarding these trends, the stock will be frozen as an escalation measure. The team remains committed to proactively engaging with non-responsive companies, particularly in instances where negative data trends persist or show signs of worsening from the previous years.

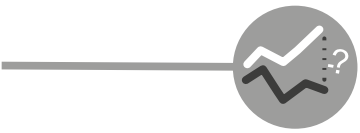
The results of the company's response to engagement and dynamics of the DNSH are then displayed on the fund monitoring system for the Investment manager to be able to integrate the results into the investment strategy.

This allows for an informed decision to be made on the weight of the stock which incorporates the sustainability dynamics at a stock level when constructing the portfolio, prioritising the companies which respond positively to engagement over unresponsive companies.

In addition to DNSH and other engagements such as SDG growth-related engagements, at the end of 2025, 21 out of 288 companies—representing 3.4% of the weighted equity portfolio—did not publicly disclose a strong commitment to the Sustainable Development Goals. Engagement was initiated with all of these companies to realise their current contribution to the SDGs and set specific commitments towards the goals most material to them.

In 2025, Niche AM cast votes at 32 general meetings across NEF Ethical Global Trends funds. Through these engagements across Asia, Europe, North America, Oceania, and Africa, Niche AM reinforced its commitment to active stewardship and the promotion of good governance and sustainable investment practices across its global portfolio.

In addition, in May 2025, NicheAM took part in the European Commission's review and proposed revision of the Sustainable Finance Disclosure Regulation (SFDR) to provide opinions and criticisms of the current framework and suggestions for improvement.
NicheAM also participates in collaborative engagements and stewardship initiatives to be part of the bigger picture to support the SDGs and drive change in certain industry sectors. In 2025, NicheAM continue to be a part of three collaborative engagements through the investor networks of FAIRR and PRI. The engagements focus on sustainable aquaculture, protein diversification in food retail, and human rights and social issues in extractives and energy sectors as an endorser. The few engagement initiatives were selected for their relevance to significant sector-wide issues that have a critical impact on achieving the SDGs which cannot be tackled by the Investment Manager efforts alone.



How did this financial product perform compared to the reference sustainable benchmark?

There is no reference benchmark designated for the purpose of attaining the sustainable objective of the Sub-Fund

- ***How did the reference benchmark differ from a broad market index?***

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: NEF Ethical Target 2029 **Legal entity identifier:** 636700HEJWHW3JEMC359

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

- [ ] **Yes**
- [x] **No**

- [ ] It made **sustainable investments with an environmental objective:** ___%
  - [ ] in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [ ] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- [ ] It made a **sustainable investments with a social objective:** ___%
- [x] It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.68% of sustainable investments
  - [x] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [x] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - [x] with a social objective
- [ ] It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

NEF Ethical Target 2029 (the "Sub-Fund") has promoted some environmental, social and governance ("ESG") characteristics, it has sought to invest mainly in stocks and bonds issued by companies with good quality Environmental, Social and Governance (ESG). It has been used an ESG rating as further explained in the other sections of this periodic disclosure.

The Sub-Fund has invested primarily in assets selected based on sustainability criteria. Sustainability has been understood to mean ecological (Environment - E) and social (Social - S) criteria as well as good corporate and government management (Governance - G). Corresponding criteria included limitation of CO2 emissions and labour relations (Social). When considering environmental and social characteristics, the Sub-Fund has invested in assets of issuers that have applied good corporate governance practices.

The Sub-Fund's use of ESG-related terms in its name met the applicable criteria of the ESMA Guidelines on funds' names using ESG or sustainability-related terms throughout the reporting period.

The Sub-Fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

- ***How did the sustainability indicators perform?***

The attainment of the promoted environmental and social characteristics was assessed via the application of a proprietary ESG assessment methodology.

The methodology applied a variety of ESG Criteria (the "ESG Filter") to assess the attainment of the promoted environmental and social characteristics, which were as follows:

a. Sovereign issuers: During the year 2025, the Sub-fund has not invested in government bonds issued by countries having a significant level of corruption or other predicate offences to ML/TF identified by either of the following:
   - FATF High Risk and monitored jurisdictions
   - EU, UN and OFAC Sanctions
   - Corruption Perception Index (CPI)
   - Know Your Country data (KYC)
     neither in countries that apply the death penalty; in case of a Federation the exclusion was implemented only to the individual Federal State that apply the death penalty.

b. Corporate bond and equity issuers:

- Companies involved in any activities related to controversial weapons; This requirement was in place for the full year 2025. The exclusion was respected.
- Companies with important revenue generated from services/products which are oriented toward armaments or warfare; This requirement was in place and respected for the full year 2025.
- Companies involved in the cultivation and production of tobacco; This requirement was in place and respected for the full year 2025.
- Companies in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; This requirement was in place and respected for the full year 2025.
- Companies whose main business activity is carried out in any of the following business areas: adult entertainment, gambling, coal and unconventional oil & gas; This requirement was in place and respected for the full year 2025. However, to be highlighted that, as a result of the Management Company screen and research on the subject, one of the issuers invested, representing the 0.05% of the portfolio on average during the reporting period, was analyzed for involvement and therefore sold.

c. The targeted open-ended UCIs/UCITS: those funds are included solely when all the following conditions are met:
   - They are at least classified as article 8 funds according to Regulation (EU) 2019/2088 ("SFDR");
   - They consider principal adverse impacts of its investment decisions on sustainability factors; and
   - Their minimum percentage of sustainable investments is equal or higher than NEF Ethical Target 2029.

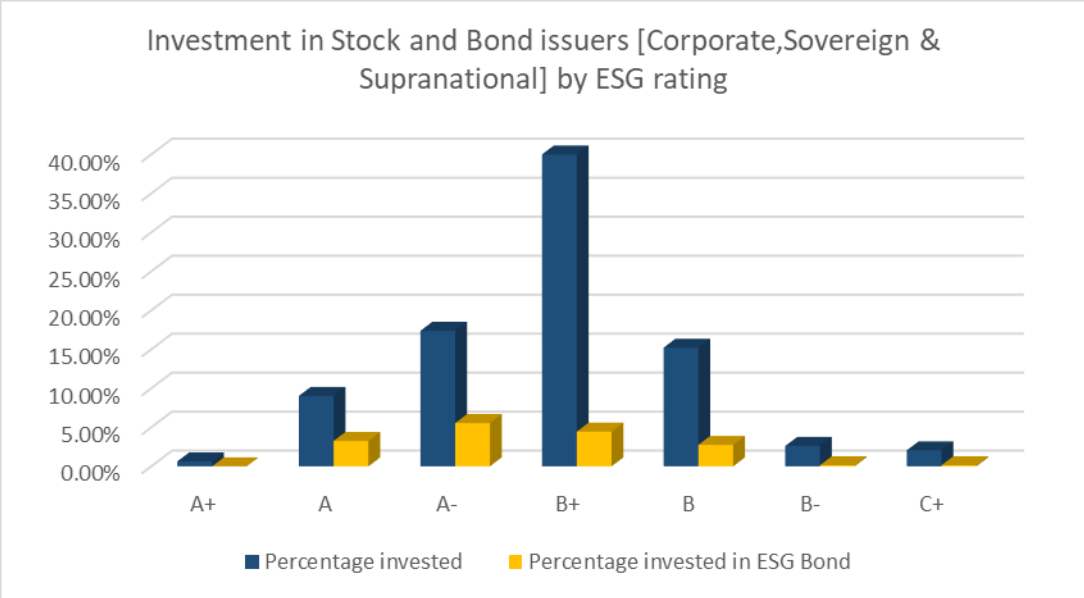
The portfolio was not invested in any UCIs/UCITS during the year.

Additionally, the Sub-Fund was invested in issuers with a ESG rating greater than or equal to 41.67 according to Refinitiv or equivalent third-party ESG rating providers.

The percentage invested in Green Bonds, Social Bonds, Sustainable Bonds, and all bonds linked to Sustainable / ESG / SDGs projects was 14.69% at year end and 16.36% on average.

Weighted average ESG score of the Sub-Fund according to Refinitiv (or equivalent third-party ESG rating provider), has been above 66.67 (B+) throughout the reporting period. The weighted average ESG score according was 69.799 (B+) on average during the reporting period.

The below graph shows the split of issuers by ESG rating at year end. The yellow bar represents the percentage of issuers which were either Green Bonds, Social Bonds, Sustainable Bonds or other bonds linked to Sustainable / ESG / SDGs projects.



The ESG rating score is a conversion of the Refinitiv ESG score range into rating letters according to the below mapping table.

Refinitiv	Score range Refinitiv		Description
D -		8.33	'D' score indicates poor relative ESG performance and insufficient degree of transparency in reporting material ESG data publicly
D	8.33	16.67	
D +	16.67	25.00	
C -	25.00	33.33	'C' score indicates satisfactory relative ESG performance and moderate degree of transparency in reporting material ESG data publicly
C	33.33	41.67	
C +	41.67	50.00	
B -	50.00	58.33	'B' score indicates good relative ESG performance and above average degree of transparency in reporting material ESG data publicly
B	58.33	66.67	
B +	66.67	75.00	
A -	75.00	83.33	'A' score indicates excellent relative ESG performance and high degree of transparency in reporting material ESG data publicly
A	83.33	91.67	
A +	91.67	100.00	

The sustainability indicators were not subject to an assurance provided by an auditor or a review by a third party.

… and compared to previous periods?

Not applicable as this is the first reporting period.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The Sub-Fund partially invested in sustainable investments according to article 2(17) SFDR during the year.

The Investment Manager confirmed that the minimum proportion of 1% of sustainable investments was respected over the year 2025.

According to the Management Company the percentage of sustainable investment was 51.68% on average during 2025. Such sustainable investments were investments which contributed to an environmental or a social objective, did no significant harm, met minimum safeguards and had good governance.

The Management Company considers that, in order to be classified as sustainable investment, an investment should either have more than 20% of its revenues aligned with the EU Taxonomy which is meant to contribute to a environmental objective, or contribute positively to any of the SDG principles which is meant to contribute to a social objective or be a Green Bonds, Social Bonds, Sustainable Bonds, or bonds linked to Sustainable / ESG / SDGs projects which is meant to contribute to a social or environmental objective depending on the nature of the bond.

The sustainable investment made by the Investment manager did not target any of the six objectives defined by the EU Taxonomy. However, according to the Management Company, the percentage invested in sustainable investment aligned with the EU Taxonomy objectives is 2.90%. For the sake of clarity, this percentage is comprised of the revenues aligned with the EU Taxonomy objectives of investee companies which have more than 20% of their revenues aligned with the EU Taxonomy, according with the definition of sustainable investment of the Management Company mentioned above.

The EU Taxonomy objectives taken in consideration for the sustainability definition are the investments that are directed at funding, or are associated with taxonomy-aligned economic activities, which are:

1. Mitigation of climate change
2. Adaptation to climate change
3. Sustainable use and protection of water and marine resources
4. Transition to the circular economy
5. Pollution prevention and control
6. Protection and restoration of biodiversity and ecosystems

Below a breakdown of the investment per each of the environmental objectives:

Environmental objectives	%
climate change mitigation	2.50%
climate change adaptation	0.03%
the sustainable use and protection of water and marine resources	0.01%
the transition to a circular economy	0.09%
pollution prevention and control	0.27%
the protection and restoration of biodiversity and ecosystems	0.00%

The SDGs are focused on the positive development of our society, which is a very broad and social goal. The environmental factors included in the SDGs are instrumental to the positive development of human society, which remains the primary goal of the SDGs. Hence, the environmental factors are one of the many parts that must be put

together for our world to move towards a positive direction, to this extend it is considered that SDGs are contributing to social objectives only.

The Management Company is assessing independently the contribution made by the Sub-Fund to the various SDG goals. To do so usually the ISS SDG impact rating is used for each investment. However other equivalent SDG impact analysis could be used. The ISS SDG rating is based on 3 pillars:

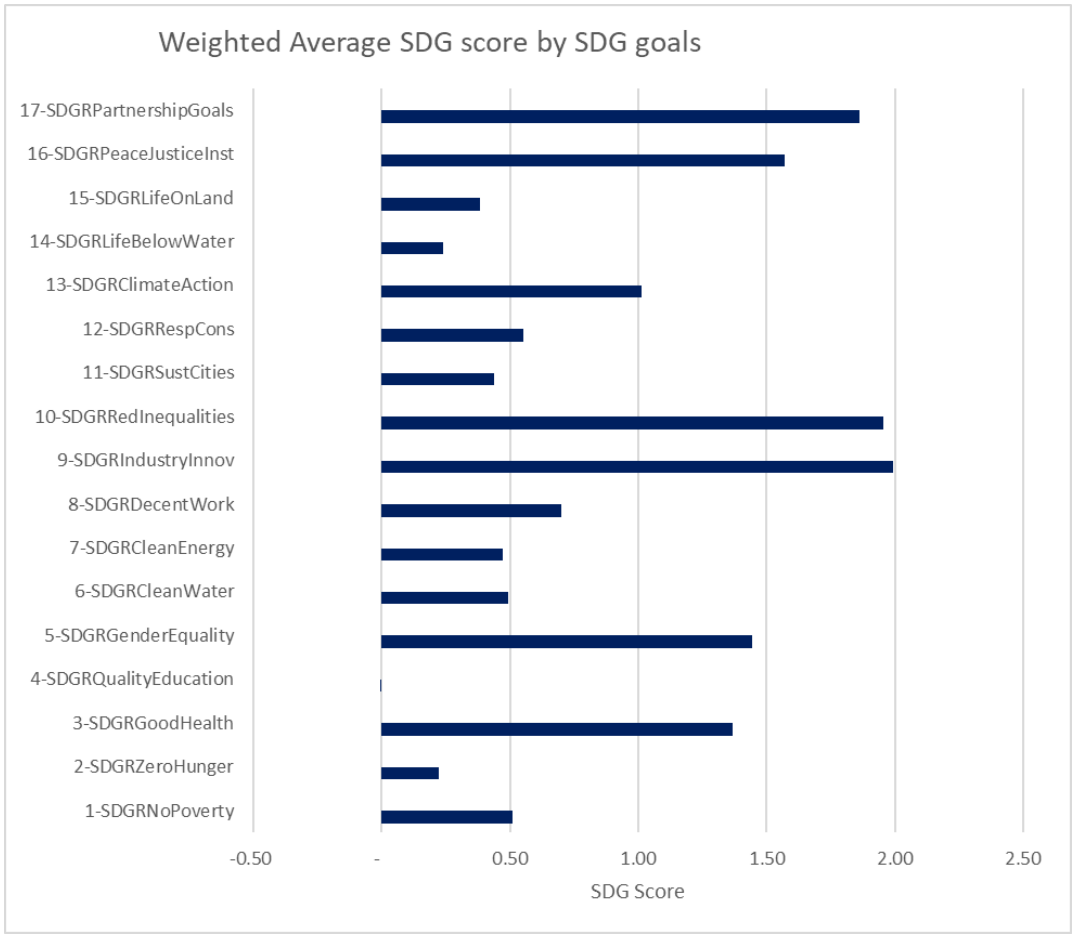
- Product and services identify contribution or obstruction to SDGs, based on revenues. The score is ranging from -10 to +10 based on the percentage of revenues contributing or obstructing with the goal, +10 imply a 100% contribution.
- Operations management: evaluate impact along the value chain, based on corporate ESG practices and impact. The score is ranging from -10 to +10.
- Controversies: identify alleged or verified failure to respect norms that obstruct SDG. The score ranges from 0 (no controversies) to -8 (large negative controversies).

At the goal level, the three pillars scores are combined in a two-step approach to measure a company's holistic impact on a specific SDG.

The 3 scores are compiled for each goal, both operation management and controversies are added together and compared to the product and services score. Then the following logic is applied: Highest positive score if only positive scores, Lowest negative score if only negative scores, sum of the positive and the negative score in case of mixed scores.

ISS SDG impact rating ranges from -10 to +10. To contribute positively the ISS SDG impact rating should be at least 2.

In the below table it is represented the Sub-Fund SDG impact rating on average during the year to each of the SDG (calculated as weighted average of the SDG impact ratings of any investment in the Sub-Fund).



Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To confirm that the sustainable investments that the financial product partially made did not cause significant harm to any environmental or social sustainable investment objective a DNSH test (do not significant harm test) was run independently by the Management Company on the portfolio. Any investment failing such test was not considered as sustainable.

The DNSH test run by the Management Company was based on several pillars:

- Norm based screen: to identify issuer based on the issuer's link with any breaches of international standards.
- Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment; and
- Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained
- PAI evolution: quantitative data (where available) on PAI indicators is used to evaluate whether an issuer is involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators are also integrated in several part of the Management Company oversight process including the DNSH test:

- Norm based screen: no issuers considered as sustainable investments were linked to any breaches of international standards during the reporting period.
- Activity-based screens: no issuers considered as sustainable investments were involved in activities with significant negative impacts on society or the environment.
- Sustainability indicators: all issuers considered as sustainable investments had a measure on how the environmental or social characteristics promoted by the financial product were attained.
- PAI evolution: quantitative data (where available) on PAI indicators were used to assess whether an issuer is involved in activities that cause significant harm to any environmental or social objective. The Management Company methodology revolves around the consideration that the most relevant check to be conducted on PAI is to determine whether a company is in an upward trend to reduce its negative impacts rather than fixing absolute thresholds and not considering the evolution. PAI evolution, on the various indicators for which the data are available and reliable, are usually considered. With the target to cover the gaps on historical data missing, PAI indicators could be compared versus the average of the peers of its sector when available.

Quantification was achieved through a score given by the evolution of PAI over the past 2 years, or the position of specific PAIs relative to industry peers. The final stage of the DNSH test aggregates the result of all PAIs into three macro-categories (Emission Score, Environment Score, Social Score), which in turn are aggregated to obtain a final score and verify that sustainable investment has passed the DNSH test.
Issuers failing the DNSH test performed by the Management Company were finally not classified as 'sustainable investments'.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Management Company confirms that sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The principal adverse impact of investments on sustainability factors ("Principal Adverse Impact" or "PAI") was considered by the Investment Manager in the purchasing of securities, money market instruments and investment shares. Indicators used to identify adverse impacts on sustainability factors from investments in companies were derived from the following categories: greenhouse gas emissions, biodiversity, water, waste and social and labour issues. For investments in securities of countries, indicators in the categories of environmental and social issues were taken into account

In the analysis of countries, PAIs were taken into account by the Investment Manager by excluding those countries that had a comparatively high GHG intensity. In addition, exclusions included unfree states that had a low score on the index issued by the international nongovernmental organization Freedom House.

The financial product considered all the mandatory Principal Adverse Impacts applying to the Product's strategy and relied on a combination of exclusion policies (normative and sectorial), ESG rating integration into the investment process, engagement approaches:

- **Exclusion:** Normative, activity-based and sector-based exclusion rules have been defined covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.

- **ESG factors integration:** The Sub-Fund has adopted minimum ESG integration standards.
- **Engagement:** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies.
- **PAIs evolution:** The Management Company believes that the most relevant check to be conducted on PAIs is to determine whether a company is in an upward trend to reduce its negative impacts or better than its peers rather than fixing absolute thresholds and not considering the evolution or the comparison with peers. Therefore PAI evolution (and/or comparison with peers) was checked at issuer level by the Management Company in the context of the DNSH test and in the engagement process.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31 January 2025 to 31 December 2025

Largest Investments[12]	Isin code	Sector	% Assets	Country

[12] Calculate as average weight over the 4 quarters

What was the proportion of sustainability-related investments?

The Sub-Fund was invested 51.68% in sustainable investments on average during the reporting period.

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

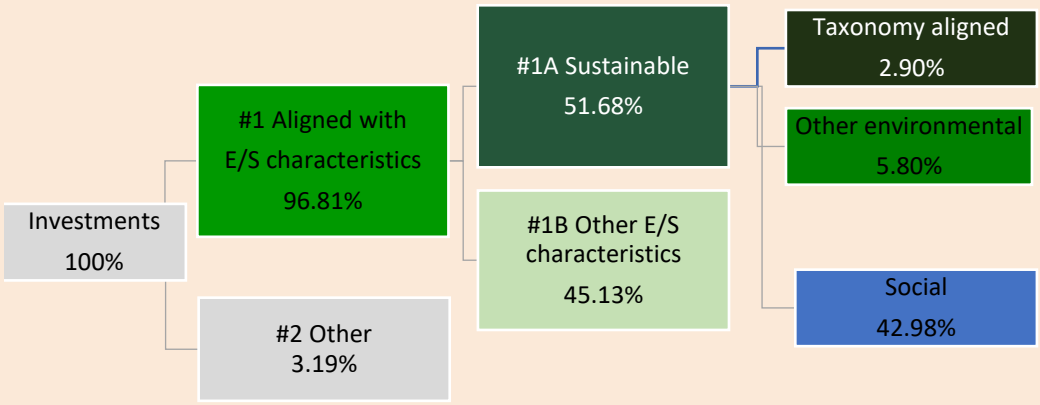
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the asset allocation?

The assets of the fund are divided into various categories in the chart below.

The respective share of fund assets is calculated by dividing the sum of each quarter value by the sum of each quarter total assets.



#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.
#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Economic sectors of the investments made were:

Sector	Sub Sector	% Assets
Basic Materials	*Chemicals*	0.70%
	Containers & Packaging	0.62%
	Metals & Mining	0.79%
	Construction Materials	0.00%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The sustainable investments with an environmentally objective aligned with the Taxonomy Regulation, calculated as the percentage of revenue aligned to the EU taxonomy (if higher than 20%) adjusted to the weight of the security in the portfolio. For the share of revenue to be considered aligned they need to be directed at funding, or are associated with taxonomy-aligned economic activities. The percentage aligned was on average 2.90% during the reporting period.

The calculation of Taxonomy aligned investments follows Article 3 of the EU Taxonomy Regulation and is based solely on publicly available data disclosed by investee companies.

Please note that the compliance of the investments with the taxonomy was not subject to an assurance by auditors.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy[13]?

[X] Yes:

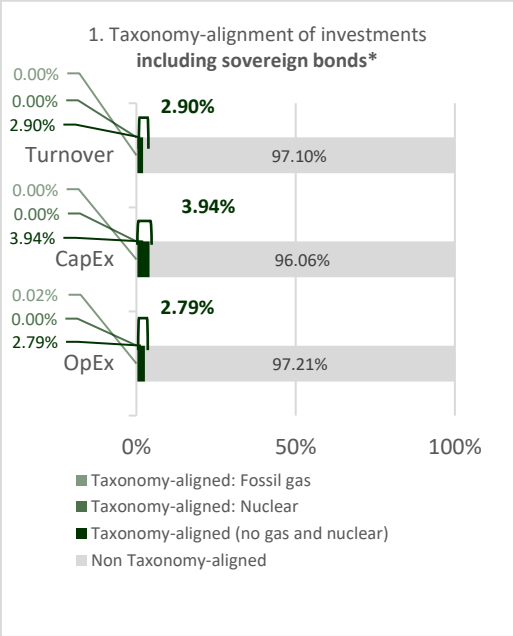
[X] In fossil gas [ ] In nuclear energy

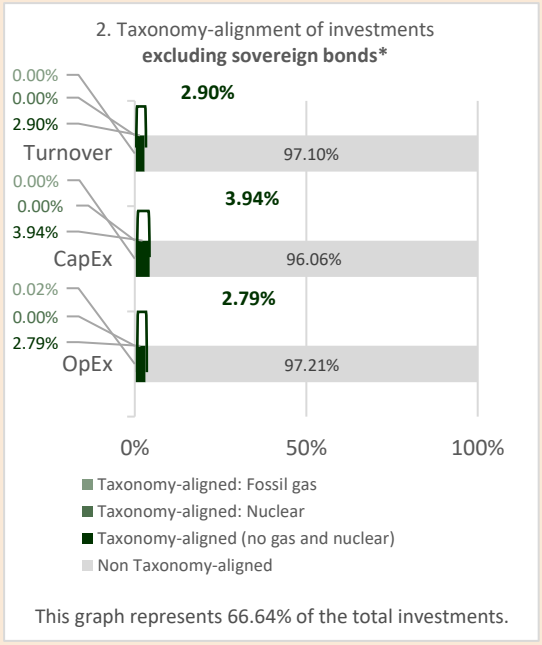
[ ] No

[13] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
-**operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonom[13]y. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.





* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

- ***What was the share of investments in transitional and enabling activities?***

An indication of how and to what extent the investments included in the financial product have been those in economic activities that have been included in the shares of the enabling activities and transitional activities referred to in Article 16 and Article 10(2) of the Taxonomy Regulation, respectively. The average percentage of share of investment in transitional and enabling activities were 0.03% and 1.11%, respectively.

- ***How did the percentage of investments that were aligned with the EU Taxonomy compared with previous reference periods?***

Not applicable as this is the first reporting period.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Sub-Fund was not commited to invest in Taxonomy aligned economic activities.
The share of sustainable investments with an environmental objective not aligned to taxonomy was at least 5.80% on average over the reporting period.

[13] The graph considers the percentage of investments aligned with the EU taxonomy and calculated by considering only invested positions, taking into account only mandatory data reported and including revenues, capital expenditures (CapEx) and operating expenditures (OpEx) across all quarters and then averaged. Data were collected using ISS ESG as the provider.

What was the share of socially sustainable investments?

The share of socially sustainable investments was at 42.98% on average over the reporting period.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

This Sub-Fund has promoted a predominant asset allocation in investments that are aligned with environmental and social characteristics (#1 Aligned with E/S characteristics) and that have been partially sustainable. In addition, and on an ancillary basis, this Sub-Fund has invested into investments that are not considered aligned with the promoted characteristics (3.19% in #2 Other). These remaining investments were composed of cash and derivatives. The Sub-fund made use of cash for liquidity purposes and derivatives for hedging, efficient portfolio management and investment.

This Sub-Fund have not considered any minimum environmental or social safeguards on cash and derivatives.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

Sustainability indicators are continuously made available in the portfolio management system, allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within the Investment Manager's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, the Investment Manager's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies, including those in the portfolio of this product.

In 2025 the engagement activities related to the Sub-Fund concerned 89 companies and around 9.30% of the total portfolio.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This is not applicable.

- ***How does the reference benchmark differ from a broad market index?***

  This is not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

  This is not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

This is not applicable.

- ***How did this financial product perform compared with the broad market index?***

  This is not applicable.
