What are the risks and what could I get in return?

Risks

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we, as the management company acting on behalf of the Fund, are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of the Sub-Fund to pay you.

This product is in this category because it invests in a range of assets with different levels of risk and its simulated and/or realised return has experienced a medium-low level rises and falls historically.

Not all risks affecting the Sub-Fund are adequately captured by the summary risk indicator.

This rating does not take into account other risk factors which should be considered before investing, these include: liquidity risk, financial, economic and political risks, credit risk, currency risk, high yield bonds risk and interest rate risk.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we, as the management company acting on behalf of the fund, are not able to pay you what is owed, you could lose your entire investment.

Beside the risks included in the risk indicator, other risks may affect the fund performance. Please refer to the "Risk factors" section of the Fund's prospectus, available free of charge at www.neam.lu/lu/documents.
